DEFINITIONS OF NEW AND CURRENT MISSION

NEW MISSION PROJECTS - These projects support the deployment and beddown of new weapons systems, new or additional aircraft, missile, and space projects and support of new equipment such as radars, communications, computers, satellite tracking and electronic security. New mission projects all support new programs and initiatives that do not revitalize the existing physical plant. The projects support new and additional requirements. Planning and design and minor construction are also included in this category.

CURRENT MISSION PROJECTS - These projects revitalize the existing facility plant by replacement or upgrading existing facilities and by alleviating long standing deficiencies not generated by new missions or equipment. Included are projects to improve the quality of life, upgrade the workplace and projects to increase productivity and achieve compliance with environmental, health and safety standards.

<u>FY 96</u>	<u>(\$000)</u>
NEW MISSION	\$189,765
CURRENT MISSION	\$305,890
TOTAL:	\$495,655

**DEPARTMENT OF THE AIR FORCE
MILITARY CONSTRUCTION PROGRAM
FISCAL YEAR 1996**

ECONOMIC CONSIDERATIONS

An economic evaluation has been accomplished for all projects costing over \$2 million and the results are addressed in the individual DD Forms 1391.

DESIGN FOR ACCESSIBILITY OF PHYSICALLY HANDICAPPED PERSONNEL

In accordance with Public Law, 90-480, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

ENVIRONMENTAL STATEMENT

In accordance with Section 102(2) (c) of the National Environmental Policy Act of 1969 (PL 91-190), the environmental impact analysis process (EIAP) has been completed or is actively underway for all projects in the Air Force FY 1996 Military Construction Program.

EVALUATION OF FLOOD PLAINS AND WETLANDS

All projects in the program have been evaluated for compliance with Executive Orders 11988, Flood plain Management, and 11990, Protection of Wetlands, and the Flood plain Management Guidelines of U.S. Water Resources Council. Projects have been sited to avoid or reduce the risk of flood loss, minimize the impact of floods on human safety, health and welfare, preserve and enhance the natural and beneficial values of wetlands and minimize the destruction, loss or degradation of wetlands.

ENVIRONMENTAL COMPLIANCE

The FY 96 MILCON request includes \$68 million for requirements necessary to correct current environmental noncompliance situations and to prevent future noncompliance. The request is the result of an intense effort to correct environmental concerns existing in five major infrastructure areas: wastewater treatment systems, corrosion control systems, hydrant refueling systems, underground storage tank systems, and live fire training facilities.

CONGRESSIONAL REPORTING REQUIREMENTS

1. STATEMENTS ON NATO ELIGIBILITY

These are in response to the requirement in the FY 1988 Senate Appropriations Committee Report, 100-200, page 13, and are included in the appropriate project justification.

2. STATEMENTS ON COMPLIANCE WITH CONSTRUCTION MANUAL 4210.1M

These are in response to the requirement in the FY 1988 Senate Appropriations Conference Report, 100-498, page 1003, and are included in each project justification.

3. NEW AND CURRENT MISSION ACTIVITIES

The FY 1989 Senate Appropriations Committee Report, 100-380, pages 10 and 11, identified a requirement to include an exhibit in the budget justification books that displayed required projects in two separate categories: New Mission and Current Mission. The CM (current mission) or NM (new mission) designation which follows the project on the listing at page 17 identifies each project as new or current mission. Current mission MILCON is further broken down to indicate environmental projects. Additionally, each justification in Block 11 of the DD Form 1391 indicates whether the project supports a new or current mission.

4. RESOLUTION TRUST CORPORATION ASSETS

Senate Armed Services Committee Report 101-384, dated 20 July 1990, on the National Defense Authorization Act for FY 91 requested the Department to screen Resolution Trust Corporation assets to determine if proposed construction projects could be more economically met through the purchase of existing assets held by the Resolution Trust Corporation. The FY 96 Military Construction and Family Housing programs were compared to the current real estate asset inventory published by the Resolution Trust Corporation. It was determined and the Department certified that no assets exist that can be economically used in lieu of the FY 96 projects requested.

10. Description of Proposed Construction: Alter existing child development center facility and construct a new child development center facility. New facility with concrete foundation, masonry walls, structural steel frame, and roof system. Includes utilities, pavements, Energy Monitoring Control System (EMCS), site improvements, and all necessary support. Air Conditioning: 200 Tons.					
11. REQUIREMENT: 36,078 SF ADEQUATE: 2,328 SF SUBSTANDARD: 14,606 SF PROJECT: Alter existing child development center and construct a new child development center. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. These facility requirements are in accordance with the Military Child Care Act of 1989. Child development services are required for a total of 427 dependent children. A properly sized and functionally configured child development center complex is required to provide supervised care and development experience for children ages six weeks through twelve years, including all preschool activities. Multiple facilities are required to comply with the DoD directive establishing the maximum number of children a single facility can support. Adequate child care facilities must be provided to accommodate the special requirements placed on military families and single parents. The programs offered must provide professional care, operate during nonstandard hours, provide services on an hourly, daily, or part-time basis, and provide early developmental care for children. CURRENT SITUATION: Presently, two child development centers exist capable of supporting a total of 147 children. A small satellite facility supporting 27 children is in adequate condition and will continue to be

<p>used. The other facility accommodates a maximum of 120 children. Daily attendance at this center averages 120, or 100%. At the present time, 80 children are on the waiting list. The actual number of children not being accommodated is higher because many parents do not bother placing their children on the list once they learn the required waiting period. One hundred forty preschool children cannot be supported because their facility was demolished after a DoD inspection declared it unusable. This project will result in a child development center complex which will serve a total of 400 children. The existing facility is too small and poorly arranged for safe and effective child development support. Storage space is inadequate and layout is poor. Room sizes are too large to meet the required adult-to-child ratio. The existing facility has health and safety hazards because toddlers cannot be closely supervised. Further, a larger and better equipped kitchen along with additional bathroom facilities are needed to properly care for infants and toddlers. The facility is currently filled to capacity with 120 children between the ages of six weeks and five years. Homecare is at maximum usage. Off-base day care facilities are limited and normally twice as expensive as on-base facilities placing a financial hardship on junior enlisted personnel. Further, many young families are stationed at Maxwell for short periods, one year or less. This is typically insufficient time to move to the top of waiting lists for community facilities.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Lack of quality child care contributes to employee absenteeism, low morale and has a negative impact on the military and civilian workforce. Personnel will be forced to find alternate, more expensive, and unaccredited child care services off the installation. The inability to provide safe and worry-free child care and preschool activities will cause unnecessary stress and financial hardship to those personnel who require these services. Some families will not be able to find affordable child care services, forcing parents to either quit work or place their children with unqualified people.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide" and DoDI 6060.2, "Child Development Center Programs", published in January 1993. An economic analysis has been prepared comparing alternatives of new construction, add to and alter, and status quo operation. Based on the present value and benefits of the respective alternatives, add to and alter was found to be the most cost efficient over the life of the project.</p>

<p>10. Description of Proposed Construction: Demolish interior walls, finishes, and utilities. Alters existing three-story facility to provide new room-bath-room configuration; includes electrical, structural, and mechanical alterations, entrance lobby, lounge, laundry, basement storage area, and kitchen. Replace windows, minor exterior refinishing, and all other necessary support.</p> <p>Grade Mix: 25 E5-E6; 21 E7-E9.</p>				
<p>11. REQUIREMENT: As required.</p> <p><u>PROJECT:</u> Alter dormitory. (Current Mission)</p> <p><u>REQUIREMENT:</u> This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing that promotes proper rest, relaxation, and personal well-being. Properly designed and furnished quarters which provide both privacy and sufficient community areas are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 46 personnel: 25 E5-E6 and 21 E7-E9, with a maximum utilization of 92 personnel.</p> <p><u>CURRENT SITUATION:</u> The facility to be altered was constructed in 1953 and the last renovation was in 1980. The floor plan includes both private and semi-private bathrooms, but none of the rooms meet space requirements as specified in Military Handbook 1190, "Facility Planning and Design Guide". Lighting is inadequate, rooms are poorly ventilated during summer months, and the windows are energy inefficient. Awkward floor plans have no storage within the rooms and there is no central storage.</p> <p>Asbestos-containing materials can be found in piping insulation, floor tiles, and concrete asbestos wall board. The dormitory occupancy rate</p>

<p>exceeds 96 percent. E-6 and above are authorized to live off-base due to inadequate dormitory space; however, off-base properties are distant and in limited supply, as documented in the recent Housing Market Analysis.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Substandard living conditions will continue to degrade the morale, productivity, and career satisfaction of the enlisted force. Demand for acceptable off-base quarters will continue to exceed availability. Quarters allowance alone will exceed \$364,000 per year to house airmen off-base.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. This project is part of a comprehensive program to upgrade all dormitories within a single, centrally-serviced area. An economic analysis has been prepared comparing alternatives of new construction, revitalization, leasing, and status quo. Based on the present value and benefits of the respective alternatives, revitalization was found to be the most cost-effective over the life of the project. This is a candidate project for a Comprehensive Interior Design (CID) package. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection for Facilities. Cost for fire protection systems for this project is shown separately since this new standard is not yet reflected in OSD approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Reinforced concrete foundation and floor slabs, masonry walls, and roof system. Includes interior entrances to room, laundry area, connection to the central heat plant, water, sewer, and electric. Provide adequate parking, exterior lighting, interior fire protection, television and telephone connections in each room, and all necessary support. Grade Mix: 80 01-03.					
11. REQUIREMENT: 174 PN ADEQUATE: 94 PN SUBSTANDARD: 0 PROJECT: Construct a visiting officers quarters (VOQ). (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. Aircrew and maintenance officers deployed for Exercise Cope Thunder and routine transient officers require housing that will ensure proper rest, relaxation, and personal well-being. Properly designed and furnished quarters which provide individual privacy are essential to assure the successful accomplishment of the increasingly complicated jobs these people must perform. CURRENT SITUATION: There is a severe shortage of visiting officers quarters at Elmendorf AFB during Cope Thunder exercises. In 1992, the VOQ occupancy rate routinely exceeded 100% occupancy during Cope Thunder exercises. Due to the severe Alaskan winters, Cope Thunder exercises are scheduled during the spring, summer, and fall months. This schedule coincides with the peak of the Alaskan tourist season. Hotels in the Anchorage area are reserved to capacity months in advance. As a result, officers participating in the exercises are doubled up in rooms designed for single occupancy, while other transient officers and permanently assigned officers arriving or departing Elmendorf AFB are issued non-availability statements. Elmendorf has been unable to obtain contract

VISITING OFFICERS QUARTERS	FXSB963001	
<p>quarters. Local hotels are unwilling to reserve rooms at Government rates due to the heavy tourist influx. Often, even with non-availability statements, transient officers are unable to find rooms at any price. It is not uncommon to find these people sleeping in their automobiles or VOQ office lobbies because no suitable rooms are available off-base. Elmendorf's VOQ shortage has been further compounded by the addition of a new fighter squadron in 1991. The number of Cope Thunder participants is limited by the lack of VOQ space.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Insufficient on-base billeting space will continue to force officer aircrew members to share rooms designed for single occupancy. This situation will degrade aircrew rest schedules and decrease the morale and proficiency of exercise participants. Other visiting officers will continue to be issued non-availability statements to search for off-base quarters at rates of over \$100 per night during the peak tourist season.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of MIL-HNBK 1190, "Facility Planning and Design Guide". All known alternative options were considered during the development of this project. A preliminary analysis of reasonable options for accomplishing this project (new construction, revitalization, and status quo) was done. It indicates there is only one option that will meet mission requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection for Facilities. Cost for fire protection is shown separately since this new standard is not reflected in OSD approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Remove two aboveground storage tanks (ASTs); relocate bulk storage area and install eleven 30,000 gallon ASTs. Downsize total fuel storage capacity below 10,000 barrels. Includes tank removal and disposal, new piping, site work, utilities, soil remediation, and all necessary support work.					
11. REQUIREMENT: As required. PROJECT: Remove and replace aboveground fuel storage tanks. (Current Mission) REQUIREMENT: This is a Level II environmental compliance project. Upgrade of ASTs regulated by 18 Alaska Administrative Code 75 is required by January 1997. The state has set standards that require all regulated tanks to have a leak detection system, cathodic protection, liner, overfill protection, and secondary containment. Alaska Statute Title 46 requires oil terminal facilities with noncrude oil storage capacities greater than 10,000 barrels to have a plan, the necessary personnel, and equipment to control and clean up a discharge equal to the capacity of the largest oil tank within 72 hours. This project removes and disposes of two 492,000 gallon tanks and associated piping; installs eleven 30,000 gallon self-contained tanks at the new bulk fuel storage area. New pipe must be installed to meet new storage configuration and to replace deteriorating lines. CURRENT SITUATION: Two 492,000 gallon storage tanks are located on a 250 foot plateau overlooking the Bering Straits. The tanks have no leak detection, overfill protection, or cathodic protection. Most of the fuel lines are underground with no cathodic protection. The location of the tanks poses a serious environmental problem. Should a leak or spill occur, it could go undetected causing catastrophic environmental damage.

<p>Each tank individually exceeds 10,000 barrels, triggering greater contingency response requirements. Minimal site manning and extreme arctic weather make it impossible to meet strict state requirements for inspection and contingency response.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Without this project, the potential for environmental contamination will remain high in the event of a leak or spill. After January 1997, the Air Force will be subject to monetary penalties, and litigation could result in forced compliance and remediation. Unless the total storage capacity is reduced below 10,000 barrels, the site will be unable to meet strict contingency response requirements; further, additional on-site personnel would be required at an estimated annual cost of over \$400,000, subject to state approval.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements." A preliminary analysis of reasonable options for accomplishing this project (status quo, repair, and replacement construction) was done. It indicates there is only one option that satisfies statutory requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Masonry walls, concrete foundation and floor slab, structural frame and metal roof system. Includes room-bath-room modules, day rooms, linen storage, mechanical equipment room, communications, fire protection, utilities, parking, and all other necessary support. Air Conditioning: 50 Tons. Grade Mix: 108 E1-E4.				
11. REQUIREMENT: As required. PROJECT: Construct a dormitory. (New Mission) REQUIREMENT: A dormitory is required to house additional unaccompanied enlisted personnel associated with the beddown of two additional F-16 squadrons at Luke AFB. A major Air Force objective is to provide unaccompanied enlisted personnel with on-base housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 108 personnel: 108 E1-E4, with a maximum utilization of 108 personnel. CURRENT SITUATION: The base does not have sufficient housing facilities to accommodate the unaccompanied enlisted personnel increase resulting from the beddown of two additional F-16 aircraft squadrons (48 aircraft) at Luke AFB. These aircraft are scheduled to be on station in second quarter of FY95. Many of the personnel who qualify for on-base unaccompanied housing are forced to live off base. The cost of off-base housing and commuting make living off base too expensive for many junior enlisted personnel. For many airmen, this is their first assignment. They have no experience managing a household and require the support

<p>networks inherent with on-base dormitories.</p> <p>IMPACT IF NOT PROVIDED: Unaccompanied enlisted personnel will be forced to live off-base. An annual cost of \$1,315,094 million for off-base housing will be incurred. Personnel will not be able to afford off-base housing that meets Air Force standards and will incur additional commuting costs. Personnel will be forced to live in substandard housing degrading the morale, productivity, and career satisfaction of the enlisted force.</p> <p>ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection Facilities. Cost for fire protection is shown separately since this new standard is not yet reflected in OSD approved unit cost factor for dormitories. An economic analysis has been prepared comparing alternatives of direct compensation and new construction. Based on the present value of benefits of the respective alternatives, new construction was found to be the most cost effective over the life of the project.</p>

10. Description of Proposed Construction: Replace deteriorated sections of existing sewer lines and slip line as required; eliminate cross-connections between sanitary sewer and storm drainage; replace/repair degraded manholes; sitework to include pavement replacement of roads, parking lots, sidewalks and landscaping; dewatering, shoring and other necessary support.					
11. REQUIREMENT: 57,130 LF ADEQUATE: 28,565 LF SUBSTANDARD: 28,565 LF PROJECT: Upgrade existing sanitary sewer system. (Current Mission) REQUIREMENT: This is a Level I environmental compliance requirement. Currently, Little Rock AFB cannot comply with the Clean Water Act (CWA) under 40 Code of Federal Regulations (CFR) 403 for pretreatment of permitted discharges and under 40 CFR 122 for direct National Pollution Discharge Elimination System (NPDES) discharges. The Industrial Wastewater Discharge Permit issued by the City of Jacksonville Wastewater Utility prohibits discharge of untreated sewage to "waters of the state". Repair of sanitary sewer mains is required to maintain structural integrity of the sewer system for dependable transfer of the wastewater from the source to the treatment facility. CURRENT SITUATION: Permit violations have been documented regarding excessive infiltration/inflow of wastewater discharge. During excessive rainfall, sewer discharge increases threefold. Periodically, line failure releases untreated sewage to area surface streams violating the NPDES permit and CWA. In 1993, the base sent several notices to the State reporting infiltration/inflow related system surges and releases due to line failures. The base received a Notice of Violation (NOV) from EPA due to releases of untreated wastewater to surface waters on 21 July 1992. IMPACT IF NOT PROVIDED: The base will continue to receive Notices of

<p>Violations (NOVs) due to non-compliance with CWA requirements. Fines and penalties up to \$25,000 per day may be levied against Little Rock AFB in conjunction with NOVs.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of the Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". All known effective options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Plan and execute closure of Landfill No 3.				
<p>11. REQUIREMENT: As required.</p> <p><u>PROJECT:</u> Close landfill. (Current Mission)</p> <p><u>REQUIREMENT:</u> This is a Level I environmental compliance requirement. Landfill No 3 must be closed in accordance with California Code of Regulations (CCR) Title 23, Division 3, Chapter 15 and Title 14, Division 7, Chapters 3 and 5. In addition, Draft Waste Discharge Requirements (WDR) to be adopted by the California Regional Water Quality Control Board includes specifications for closure. CCR Title 14, Chapter 3, Article 7.8, Section 17763, requires the implementation of the Final Closure Plan for the named landfill within 30 days. Section 17773 CCR gives construction requirements for the design of the final cover.</p> <p><u>CURRENT SITUATION:</u> Existing Landfills Nos 1, 2, and 3 require formal closure. The California Regional Water Quality Control Board, the Integrated Waste Management Board, and the Yuba County Environmental Health Department have indicated that the base can proceed in reverse order: closure of Landfill No 3 in 1996; Landfill No 2 in 1997; and Landfill No 1 in 1998. Landfill No 3 operated from some time in 1980 until Oct 1993. Landfill No 2 operated from approximately 1960 until some time in 1980. Landfill No 1 operated from approximately 1940 until 1960. Beale AFB is currently using the Yuba-Sutter Disposal, Inc. landfill for solid waste disposal. All three landfills on Beale AFB are in violation of the "Record of Disposal Site Inspection" requirement for submittal of closure plans. These landfills are out of compliance with California State Regulations and draft WDR to be adopted by California Regional Water Quality Control Board.</p>

10. Description of Proposed Construction: Construct new additions for jet engine maintenance (20,000 SF), data reduction vault (12,000 SF) and storage (25,000 SF) of concrete foundation and floor slab, metal/concrete walls and roof system; alter portions of four existing buildings to accommodate F-22. Includes utilities, pavements and necessary support. Demolish four buildings. Air Conditioning: 25 Tons.				
11. REQUIREMENT: 203,200 SF ADEQUATE: 0 SUBSTANDARD: 146,750 SF PROJECT: Add to and alter an F-22 engineering test facility. (New Mission) REQUIREMENT: The Air Force Flight Test Center requires secure and modern aircraft maintenance and testing facilities to house and conduct testing for the Engineering and Manufacturing Development (EMD) phase of F-22 Advanced Tactical Fighter aircraft. The EMD phase of the F-22 program includes a total of nine EMD aircraft that will be delivered to Edwards AFB by FY99. One EMD aircraft will be delivered in FY96, two in FY97, four in FY98 and the final two in FY99. Facilities for the main flight test engineering staff and maintenance bays are included in the FY95 MILCON. Additional facilities to support F-22 EMD aircraft are required for jet engine maintenance, storage, and a data reduction vault. Alteration or upgrade is needed for the existing shops, engineering work space, missile maintenance, ground support equipment maintenance, and classified destruction facilities to accommodate flight test operations personnel, management staff and avionics engineering personnel. Four buildings totaling 3,050 SF will be demolished. CURRENT SITUATION: There are no existing hangars at Edwards AFB that have the proper electrical and mechanical systems to support testing, repairs,

10. Description of Proposed Construction: Alter the ground floor and construct two floors in unfinished portion of the anechoic chamber. Work includes steel framing, concrete floors, masonry walls, interior partitions, clean rooms with Radio Frequency Interference (RFI) shielding, insulation, and vibration/sound attenuation. Also modify and extend utilities and provide necessary support. Air Conditioning: 100 Tons.				
11. REQUIREMENT: 214,250 SF ADEQUATE: 162,300 SF SUBSTANDARD: 16,200 SF PROJECT: Add to and alter an anechoic chamber. (New Mission) REQUIREMENT: Additional specialized space is required to test electronic combat and integrated avionics systems for advanced aircraft such as the F-22, F-117, B-2, and C-17. Weapons system components must first be tested in clean rooms with Radio Frequency Interference (RFI) and Electro-Magnetic Pulse (EMP) shielding and then be transferred to the anechoic chamber for integrated testing on full scale aircraft. Shielded rooms must be able to test classified threat generators, target simulators and other sophisticated electronic test equipment used to simulate hostile enemy airspace without compromising data collection or security. CURRENT SITUATION: There are no specialized rooms or support space in the anechoic facility to test new weapon system components prior to integrated testing on test aircraft. Existing rooms in an adjacent facility fragment the workforce and lack required security, and RFI and EMP shielding. After weapon system components are individually tested in individual specialized rooms in the adjacent facility, they are then transferred to the anechoic chamber for integrated testing on full-scale aircraft. Transferring the components to the anechoic chamber requires additional

4. PROJECT TITLE		5. PROJECT NUMBER
ADD TO AND ALTER ANECHOIC CHAMBER		FSPM943501
<p>security measures and increases scheduling conflicts. Electronic test conditions in both the specialized rooms and the anechoic chamber cannot be tailored for each weapon component because there are more components being tested at any one time than there are specialized rooms. Ferrying components back and forth from the adjacent facility to the anechoic chamber can be extremely time consuming since components must compete for space for initial setup and subsequent modifications.</p> <p><u>IMPACT IF NOT PROVIDED:</u> New and upgraded weapon systems will require more extensive flight testing at much greater cost to assure minimum developmental risk and cost. The lack of adequate specialized space with RFI and EMP shielding will continue to compromise test and data collection, thereby resulting in program slippage and costly overruns.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Reinforced concrete foundation, floor slabs, masonry walls and roof system. Includes interior partitions, room-bath-room modules, laundries, storage, lounge areas, vehicle access pavement and necessary support. Demolish four buildings. Air Conditioning: 100 Tons. Grade Mix: 136 E1-E4.				
11. REQUIREMENT: As required. PROJECT: Construct a dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 136 personnel: 136 E1-E4, with a maximum utilization of 136 personnel. CURRENT SITUATION: The base has insufficient facilities to accommodate unaccompanied enlisted personnel. Local rentals and utilities are so expensive that enlisted personnel cannot afford to live in off-base housing which is located several miles from the base. The existing wooden dormitories were originally built in the 1950s and are poorly suited to the hot, dry climate and do not meet California seismic standards. The desert climate causes the wood to dry and crack. Frequent tremors have caused the buildings to sway and further degrade the aging structures. Space authorizations have changed in the 40 years since the dorms were designed and constructed, and the rooms are currently undersized and substandard. The existing conditions and configuration of the buildings, combined with the presence of asbestos, would make

AIR FORCE		
3. INSTALLATION AND LOCATION		
EDWARDS AIR FORCE BASE, CALIFORNIA		
4. PROJECT TITLE		5. PROJECT NUMBER
DORMITORY		FSPM943013
<p>renovation a costly and uneconomical alternative. Any renovation would leave the wood structure unchanged and subject to the effects of the desert environment. Completion of this project will allow demolition of four WW II wood buildings totalling 56,000 square feet.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Adequate living quarters will continue to be unavailable and result in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel. High building maintenance and operation costs will continue to impact limited base resources and affect the accomplishment of mission related tasks. Lowered morale will contribute to retention difficulties for the Air Force.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Fire protection systems for this project meet new standard established in Military Handbook 1008-B, "Fire Protection for Facilities", dated 15 January 1994. No additional cost for fire protection was included in this project since it is less than three stories with exterior exits.</p>

10. Description of Proposed Construction: Two-story facility with concrete foundation, masonry walls, structural steel frame, sloping roof system, fire protection system, utilities, an elevator, demolition, site improvements, and asbestos removal/disposal.

Air Conditioning: 65 Tons.

11. REQUIREMENT: As required.

PROJECT: Construct a Squadron Operations/Aircraft Maintenance Unit (Sq Ops/AMU) facility. (Current Mission)

REQUIREMENT: This project is required to comply with Air Force guidance to build Objective Wing squadrons by combining aircraft operators with flightline maintainers. It replaces the existing undersized and separated squadron operations and AMU facilities with a functional and adequately sized structure to support flyers and maintainers of large framed aircraft. Space is required for Ops/AMU management support, briefing/debriefing, flight planning, standardization/evaluation, training and testing, locker rooms, flying/ground safety, tool rooms, bench stock, mobility office, scheduling, and a technical order library. In addition, an elevator is required to comply with the Americans With Disabilities Act of 1990. This consolidation is part of the Air Mobility Command initiative to bring the command's Sq Ops/AMU facilities up to minimum Air Force standards. These efficiencies are essential to maintain mission tasking rates in the Air Mobility Command.

CURRENT SITUATION: Existing Sq Ops/AMU operations are accomplished in undersized, physically separated, and substandard wooden facilities constructed in the mid-1950s. These facilities have historically been overcrowded, a condition further exasperated with the squadron unification. Inefficiencies include fragmented lines of

<p>communications/authority, lack of space for mission planning and briefings, inadequate space for equipment storage, deteriorated electrical and mechanical systems, and lack of space for tool cribs, bench stock, flight planning operations, and maintenance. A total of 32,700 square feet of substandard space will be demolished as a result of this project.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Operations, maintenance, and support personnel will remain in separated, substandard, and undersized buildings and will never develop the cohesiveness necessary to become an efficient and effective operational organization. The physical separation will continue to hamper the lines of authority and communications throughout the squadron. Essential squadron operations and logistic functions will continue to require additional work-arounds that will degrade mission performance.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, addition/alteration, and new construction) was done. It indicates new construction is the only option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Demolition of existing exterior wall, construction of addition to existing simulator facility with high bay area, sloped roof, concrete foundation and floor slab, exterior walls to match existing facility, and necessary support. Air Conditioning: 30 Tons.					
11. REQUIREMENT: 56,330 SF ADEQUATE: 49,330 SF SUBSTANDARD: 22,775 SF PROJECT: Add to KC-10 flight simulator training facility. (New Mission) REQUIREMENT: Construction is required to support Air Force tanker realignment and beddown of five additional KC-10 operational aircraft expected in the fourth quarter of FY 94. This simulator will provide initial training, proficiency, and effective mission procedures training. It is essential to provide hazardous emergency training procedures that cannot otherwise be provided. This facility directly supports flight crew training, with a simulator bay, computer room, instructor offices, lesson preparation areas, learning center, scheduling and briefing rooms, visual aids storage, mechanical room, and all necessary support. CURRENT SITUATION: The existing KC-10 flight simulator facility has only one bay and cannot support the required flight simulator training mission of KC-10 air crews for 24 PAA. The Air Force requires four KC-10 Weapons Systems Trainers (WSTs) but currently only has three. The new bay is required to house the fourth WST with an expected delivery date of 1 Sep 97. IMPACT IF NOT PROVIDED: Aircrew members will not be able to receive essential training to complete the realignment and beddown of the additional KC-10 operational aircraft. ADDITIONAL: There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However,

KC-10 ADD TO FLIGHT SIMULATOR FACILITY		XDAT963050
<p>this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project was done. It indicates that there is only one option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: A three-story structure with reinforced concrete foundation and floor slabs, masonry walls, roof, fire protection, and site improvements. Includes room-bath-room modules, laundries, storage and lounge areas and all necessary support. Includes the demolition of one dormitory. Air Conditioning: 75 Tons. Grade Mix: 98 E1-E4.					
11. REQUIREMENT: As required. PROJECT: Construct dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment project. It is a major Air Force objective to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation, and personal well being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 98 personnel: 98 E1-E4, with an maximum utilization of 98 personnel. CURRENT SITUATION: There are currently not enough adequate dormitories to meet the billeting requirements of unaccompanied enlisted personnel at this installation. Substandard facilities to be replaced do not provide semi-private baths, adequate control of heating and air conditioning, sufficient noise attenuation or necessary amenities to adequately house enlisted personnel. Travis AFB has the worst dormitories in Air Mobility Command. One substandard facility totalling 25,200 square feet will be demolished upon completion of this project. IMPACT IF NOT PROVIDED: Substandard living conditions will persist degrading morale, productivity, and career satisfaction for unaccompanied enlisted personnel. Excessive energy consumption and maintenance costs

<p>will continue if these inefficient and substandard facilities remain in use.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, sending personnel off-base paying BAQ/VHA and status quo. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost effective over the life of the project. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection for facilities. Cost for fire protection is shown separately since this new standard is not yet reflected in OSD approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Builds one new station and demolishes two old stations. Construction includes a reinforced concrete foundation and floor slab; split face block walls; pitched, standing seam metal roof and fascia. Project provides vehicle stalls, living quarters, and an uninterruptible power system. Project includes all utilities, site improvements, and pavements. Air Conditioning: 5 Tons.				
11. REQUIREMENT: 8,500 SF ADEQUATE: 0 SUBSTANDARD: 6,158 SF PROJECT: Construct a fire station. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. An adequate, centrally located fire station is required to provide fire protection capabilities to south Vandenberg AFB. The station must be manned 24 hours a day, 7 days a week with overnight accommodations provided for firefighting personnel assigned to 24-hour shifts. Response time to the Atlas and Titan space launch complexes must be 4.5 minutes or less, per DODI 6055.6 and AFR 92-1, Ch 4, para 4-2 (1). CURRENT SITUATION: Two substandard, poorly located fire stations currently exist. Consolidation of these two functions is required at a site which is central to the launch complexes. One existing station is a WW II woodframe structure. Door clearance limits the size of fire vehicles which can be sheltered. The electrical system does not meet current code, and the facility is energy inefficient and costly to maintain. Response time to the space launch complexes is over 13 minutes. This does not meet current DoD and Air Force criteria. The other station is a 25 year old metal building which is badly corroded due to the damp salt air environment; it is not repairable. Roof structural members are unsafe for maintenance people to walk on. It is inadequate in size and

AIR FORCE		
3. INSTALLATION AND LOCATION		
VANDENBERG AIR FORCE BASE, CALIFORNIA		
4. PROJECT TITLE	5. PROJECT NUMBER	
FIRE STATION	XUMU884004	
<p>configuration for 24 hour operations. Open bay sleeping quarters do not provide privacy for the male and female firefighters. Fire vehicles must be parked outdoors due to narrow door clearance, and are thus subject to rapid deterioration in the salt air. Scope and value of protected equipment and facilities: launch complexes and facilities on south Vandenberg AFB - \$300 million; cost of a Titan 4 missile including launch services - in excess of \$400 million; payload values per launch - in excess of \$1.5 billion. South Vandenberg AFB contains 35,070 acres, requiring wild land fire fighting capability. Demolition of the two existing substandard facilities (6,158 SF) is included in this project.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Unacceptable response time will continue to put valuable Air Force Space Command assets at considerable risk. The protracted use of substandard, deteriorated facilities will result in inefficient operations, higher maintenance costs, and unresponsive fire protection services. Fire protection personnel will continue to work in substandard, inefficient, and overcrowded facilities which will adversely impact their ability to provide fire protection to south Vandenberg AFB. The impact of deferred satellite coverage on its primary mission, due to launch delay, is incalculable in terms of national importance. Fire at a launch complex will have a 9 minute headstart.</p> <p><u>ADDITIONAL:</u> Criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide" are satisfied. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost effective over the life of the project.</p>

10. Description of Proposed Construction: Concrete block walls, concrete foundation and slab, built up roof. Special heating, ventilating and air conditioning with controls. Rooms for propellant and oxidizer storage, overhead doors for material delivery, computer room, special shielding for x-ray room. Utilities and site work as required. Demolish three existing buildings (which contain asbestos and lead-based paint). Air Conditioning: 80 Tons.					
11. REQUIREMENT: 14,600 SF ADEQUATE: 0 SUBSTANDARD: 5,877 SF PROJECT: Construct a chemical test and analysis laboratory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. This is also a Space Launch Facilities Infrastructure (SLFI) requirement. This project will provide critical launch operations support for Atlas, Titan, Delta, Scout, Taurus, and Pegasus space launch systems, and the Peacekeeper ICBM system. The tests and analyses performed in this facility ascertain the quality of gases, lubricants, hydraulic fluids, cryogenics, and aerospace propellants; identify contaminants that could cause malfunctions or failures in rockets, payloads, and ground support systems; and monitor post launch environmental conditions. CURRENT SITUATION: The existing facility has uncorrectable safety deficiencies. It does not meet California seismic codes and cannot be made to meet them economically. Structural deficiencies are causing severe operational problems due to vibration of sensitive measurement equipment. Results are sometimes inconsistent and tests must be rerun. Because of a lack of laboratory space, the number of chemical fume hoods in the facility is insufficient to fully support oxidizer and hydrazine analysis requirements. Delays to Titan launch operations have occurred

SLFI - CHEMICAL TEST AND ANALYSIS LABORATORY		XUMU934002
<p>because the location of the exhausts (only 15 feet from fresh air intakes) for the toxic chemical fumehoods does not permit chemists to conduct propellant tests unless a five knot wind is present. The existing facility has become dangerously overcrowded with instrumentation and equipment needed to support new environmental and waste testing programs and other launch-related requirements. Base safety inspection reports routinely list numerous space deficiencies; offices and labs must share the same space. Additional space is not available either in or around the existing facility. Due to lack of space, approximately 4,750 environmental tests must be performed each year by private contractors. Many of these tests are very expensive. For example, the "EPA toxicity metals test" costs about \$700 per test to contract out, whereas this test would cost only about \$200 if done in the local lab. Approximately 190 of these tests are done each year; consequently, this type of test alone costs about \$95,000 per year to contract out. Electrical wiring does not meet National Electrical Code requirements. Three buildings (5,877 square feet in area) will be demolished as a result of this project.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Existing safety deficiencies and the shortage of adequate laboratory space will continue to jeopardize the availability, quality, and reliability of critical, mission-essential support of spacelift and ICBM operations. The success of these missions could be adversely affected by a failure to identify contaminants in a propellant. These deficiencies are also preventing the timely development of hazardous waste testing capabilities required to comply with federal and state regulations regarding the transportation and disposition of hazardous materials. The tests described above will have to continue to be contracted out.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide", or in Air Force Manual 86-2, "Standard Facility Requirements". An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project.</p>

10. Description of Proposed Construction: Concrete foundation, floor slab, masonry walls, structural frame and built-up roof. Includes room-bath-room modules, laundries, storage, lounge, administrative space, and fitness center. Provide addition to dining facility and demolish two condemned buildings, including asbestos removal at the site of new construction, and provide necessary support. Air Conditioning: 40 Tons. Grade Mix: 150 E1-E4.					
11. REQUIREMENT: 150 PN ADEQUATE: 0 SUBSTANDARD: 0 PROJECT: Construct troop support facilities. (New Mission) REQUIREMENT: Adequate on-base quarters are required for unaccompanied enlisted personnel who will be assigned to the new Aerospace Data Facility (ADF) mission. This requirement supports the Air Force objective to provide personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Fitness and dining facilities are also needed to accommodate these additional personnel. The mission requirements of the ADF require quick personnel response which can only be provided by housing personnel on base. Also, administrative space is required for the Denver personnel support activities. This twenty-seven person office provides personnel support for the active duty members assigned to the Denver area. CURRENT SITUATION: This Air National Guard base has no dormitories. The ADF personnel are currently housed at Lowry Air Force Base, which is scheduled for closure in September 1994. Also additional enlisted personnel will be assigned to this base in support of new and expanded

<p>missions associated with the ADF. The existing dining hall and fitness center are inadequate to support the addition manpower. Two buildings totalling 37,000 SF will be demolished.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Adequate living quarters, dining, fitness, and administrative facilities will be unavailable for Aerospace Data Facility personnel, resulting in degradation of ADF's unique mission as well as the morale and productivity of assigned personnel.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of new construction, leasing, and status quo. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most economical and efficient over the life of the project. This is a companion to BRAC project CRWU953050, Dormitory, which provides living quarters for 150 additional enlisted personnel currently housed at Lowry AFB, which is scheduled for closure. Fire protection systems for this project meet new standards established in Military Handbook 1008-B, "Fire Protection for Facilities", dated 15 January 1994. No additional cost for fire protection was included in this project since it is less than three stories with exterior entrances.</p>

10. Description of Proposed Construction: Construct a fire station with 2 vehicle bays, male/female sleeping rooms, latrines and showers, kitchen/dining, recreation, and office/training areas. Project includes site work, access road, parking areas, and connection to base alarm and energy monitoring systems. Air Conditioning: 5 Tons.					
11. REQUIREMENT: 5,400 SF ADEQUATE: 0 SUBSTANDARD: 0 PROJECT: Construct a fire station. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. This project will support aircraft crash rescue requirements for a newly constructed USAF/Commercial runway and provide structural fire response for high value Air Force assets on Peterson East. Department of Defense Instruction 6055.6 requires a 3-minute response time to the farthest end of the runway and a 4.5-minute response and 2-mile maximum distance for structures. The existing base fire station cannot meet these response and distance requirements. CURRENT SITUATION: Peterson AFB and the Colorado Springs Airport operate under a mutual support agreement for crash rescue and airfield maintenance: Peterson provides crash rescue and structural fire support for the Airport, and the City maintains the runways and provides airfield management. Under this agreement, Peterson does not pay a user fee for military flights. The existing fire station is located too far from the new North runway to provide adequate crash rescue protection; test runs show that the crash response time is over the maximum time allowable by 30 seconds which is enough time to lose the crew and passengers in an aircraft accident. In addition, structural response routes for fires on Peterson East exceed the 2-mile DoD distance standard. The situation

AIR FORCE		
3. INSTALLATION AND LOCATION		
PETERSON AIR FORCE BASE, COLORADO		
4. PROJECT TITLE	5. PROJECT NUMBER	
FIRE STATION	TDKA933008	
<p>cannot be corrected by relocating the existing fire station because there is no single site which will meet the required response times for all runways and structures on Peterson AFB. The Fire Department is currently operating on a temporary waiver for crash response time for the new runway. This waiver is contingent upon the provision of a new fire station via the FY96 MILCON program.</p> <p><u>IMPACT IF NOT PROVIDED:</u> DoD standards for fire response will not be met. Aircraft passengers and crew plus \$500 million of existing and projected Air Force facilities and equipment will be at risk, as well as the lives and safety of USAF personnel working in the Peterson East area. The SAF/MII waiver for violating response criteria would have to be extended indefinitely. The operating agreement with the City of Colorado Springs would be placed in jeopardy. If the agreement is cancelled, the City could require payment of landing fees to support fire protection costs. Fees could total more than \$4 million per year.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". All known alternative options were considered during the development of this proposed project, and it was determined that this option was the optimum solution.</p>

10. Description of Proposed Construction: Demolish existing partitions. Renovation to include provision of new room-bath-room configuration, new finishes, fixtures, plumbing, HVAC, and electrical systems. Conversion from interior to exterior room entrances with balconies added. Each floor will include a laundry room, dayroom, and storage areas. Asbestos removal required for mechanical components and floor tile.
Air Conditioning: 40 Tons. Grade Mix: 67 E1-E4.

11. REQUIREMENT: As required.
PROJECT: Add to and alter dormitory. (Current Mission)
REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. This project will provide a properly-sized living area for each resident with semi-private latrines, lounge area and laundry on each floor, and storage within the facility. Estimated intended utilization is 67 personnel: 67 E1-E4, with an intended utilization of 67 personnel.
CURRENT SITUATION: The existing facility was built in the 1960's using brick/masonry construction. The three-story building has double occupancy rooms with a central latrine on each floor. This arrangement does not meet DoD living standards. Dormitory rooms have exposed masonry walls, high ceilings, inadequate lighting, obsolete electrical and mechanical systems, and inadequate insulation, all of which detract from the residents' privacy and comfort. The building is a maintenance and operational burden due to aging electrical, plumbing and HVAC systems; and it does not conform to national building codes. The sanitary sewer backs up into the basement, and the electrical feeder and transformer capacities

<p>are too small to meet today's standards and requirements.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Substandard living conditions will persist and continue to have a negative impact on morale, productivity and career satisfaction for the enlisted force. The building will need increased maintenance and will continue to fail to meet DoD standards and national building code requirements.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. A life-cycle economic analysis was performed comparing all reasonable options for accomplishing this project. Based on net present values and benefits of the respective alternatives, renovation was found to be the most cost-effective over the life of the project. Fire protection systems for this project meet new standards established in MIL-HDBK-1008B, "Fire Protection for Facilities". Cost for fire protection is shown separately since this new standard is not yet reflected in the OSD-approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Reinforced concrete footings, foundation and floor slab, pre-cast concrete walls, insulated walls and roof, fire protection system, utilities and necessary support. Open area for storage and maintenance of sailplanes. Provide extension of existing aircraft access pavement. Demolish one temporary hangar (7200 SF).				
11. REQUIREMENT: 40,000 SF ADEQUATE: 0 SUBSTANDARD: 7,200 SF <u>PROJECT:</u> Construct a sailplane hangar. (Current Mission) <u>REQUIREMENT:</u> This is a Level I Commander's Facility Assessment requirement. A hangar is required to protect sailplanes and motorgliders from adverse weather conditions. Participation in the Academy soaring program is a graduation requirement. The program provides cadets with knowledge in airmanship, situational awareness, cross-country procedures, and training in high altitude procedures. <u>CURRENT SITUATION:</u> The Academy currently possesses 18 sailplanes and 9 motorgliders. Eight additional sailplanes and two motorgliders are being procured. Presently aircraft are either crammed into existing facilities or must be disassembled each day and stored in trailers. The lack of adequate hangar space will be compounded with the arrival of additional sailplanes and motorgliders. Further, most sailplanes and motorgliders will be displaced from their present hangar space by seven T-41 and three C-150 aircraft which are being displaced by the new Enhanced Flight Screener (EFS) T-3A aircraft in the fall of 1994. Continued disassembly and reassembly of aircraft is a time consuming process which seriously hinders flight training. Disassembly and reassembly of aircraft also introduces safety risks which could lead to catastrophic consequences. Also, these aircraft are made from fragile composite materials which are extremely sensitive to damage from sunlight, high winds, water, and hail.

3. INSTALLATION AND LOCATION UNITED STATES AIR FORCE ACADEMY, COLORADO		
4. PROJECT TITLE SAILPLANE HANGAR		5. PROJECT NUMBER XQPZ930030
<p>Exposure to these conditions, over a long period of time, can weaken the airframe structure up to 85 percent. The Academy experiences severe weather on a recurring basis. Winds over 35 knots occur on the average of 134 days per year and hail, at least 1/4 inches in diameter, falls on an average of 15 days per year. This project will allow demolition of a temporary hangar facility.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Adequate hangar space for sailplanes and motorgliders will not be available. The soaring program will continue to be an inefficient operation because aircraft must be constantly disassembled and reassembled. The potential for an aircraft incident, due to this mode of operation, will continue. Aircraft will be exposed to the harsh local weather conditions causing extensive aircraft damage. Expensive repairs will be required and the mission will suffer because of the time required to carry out these repairs. Expected airframe lives of the sailplanes and gliders will be dramatically reduced without this project.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide" or Air Force Manual 86-2, "Standard Facility Requirements." The scope of this project is based on actual aircraft dimensions and established safety criteria. An economic analysis has been prepared comparing the alternatives of new construction and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project.</p>

<p>10. Description of Proposed Construction: Reinforced concrete foundation and floor slab with masonry walls, structural steel frame and metal roof system. Includes playground equipment, pavements, fencing, access drive, parking, utilities, site improvements, and all necessary support. Demolish three sub-standard facilities (10,649 SF). Air Conditioning: 60 Tons.</p>					
<p>11. REQUIREMENT: 35,369 SF ADEQUATE: 11,669 SF SUBSTANDARD: 10,649 SF PROJECT: Construct a child development center. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. This facility requirement is in accordance with the Military Child Care Act of 1989. Child development services are required for a total of 354 dependent children. A properly sized and functionally configured child development center is needed to provide supervised care for children ages six weeks through twelve years. Adequate child care facilities must be provided to accommodate the special requirements placed on military and civilian families as well as single parents. The programs offered must provide professional care, operate during nonstandard hours, provide services on an hourly, daily, or part-time basis, and provide early development care for children. The facility must provide areas for multiple program operations, allow simultaneous care of different age groups, provide space for parent involvement through conferences/workshops, and support family day care and training programs. CURRENT SITUATION: Presently, services are provided in one permanent and two temporary facilities. The permanent facility supporting 105 children is in adequate condition and will continue to be used. The temporary facilities have several fire deficiencies which endanger the occupants as well as threaten loss of accreditation. Temporary waivers allow use of</p>

CHILD DEVELOPMENT CENTER	XQPZ930036	
<p>the facilities for a limited time. Existing facilities can support a total of 220 children. Daily attendance at the centers averages 220, or 100%. Currently the waiting list ranges between 65 and 120 children. The actual number of children not being accommodated is higher because many parents do not bother placing their children on the list once they learn the required waiting period. This project will provide a facility to serve a total of 249 children. Many Academy employees must attempt to find accredited off-base child care facilities 10-23 miles away because of the long waiting list. Only 14 out of 110 local centers are accredited, and Academy personnel are eligible to use only 8 of these. Local accredited centers have long waiting lists, forcing Academy personnel to use nonaccredited centers. Due to space limitations, drop-in services cannot be provided. The permanent child development center cannot be expanded in any direction since it has a main arterial road to the south, AAFES gas station to the west, and steep rugged slopes on the north and east. This project will allow removal of two temporary facilities and demolition of a sub-standard building formerly used for child care. Child care provided at the Academy averages \$48 per week per child and averages \$120 per week per child on the local economy.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Lack of quality child care contributes to employee absenteeism, low morale and has a negative impact on the military and civilian work forces. Personnel will be forced to find other more expensive and unaccredited child care services off the installation 10-23 miles away. This inability to provide safe and worry-free child care and preschool activities will cause unnecessary stress and financial hardship to those personnel who require these services. Some families will not be able to find affordable child care services, forcing parents to either quit work or place their children with unqualified people.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide" and DoDI 6060.2, "Child Development Center Programs", published in January 1993. An economic analysis has been prepared comparing alternatives of new construction and status quo operation. Based on net present value and benefits of the respective alternatives, new construction was found to be the more cost effective alternative over the life of the project.</p>

10. Description of Proposed Construction: Demolish existing high temperature hot water (HTHW) heat plant (4950 SF) and provide seven individual natural gas-fired hot water boilers to support seven existing facilities. Demolition includes removal of asbestos and underground fuel storage tanks. Abandon underground HTHW distribution system in place. Project includes all utilities and necessary support.					
11. REQUIREMENT: 10 MB ADEQUATE: 0 SUBSTANDARD: 60 MB PROJECT: Upgrade facilities heating system. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility assessment requirement. A reliable and functional heat supply is required for facilities located within the service and supply area of the Air Force Academy for at least eight months of the year. The security police, civil engineer, civilian personnel, vehicle maintenance, and logistics functions occupy approximately 308,000 SF within this area and are dependent upon an extremely deteriorated and antiquated heating system. The existing system, consisting of a central heat plant and underground distribution system, is on the verge of failure and is expensive to operate and maintain. This project will provide stand-alone heating systems at each facility within the area, significantly saving energy and lowering operating costs. CURRENT SITUATION: The existing heat plant has two 30 million BTUH high temperature hot water (HTHW) boilers supplying heat to seven outlying buildings. The boilers are 33 years old; well beyond their expected useful life. Further, boilers are oversized by 300% for the peak heating load. Operation at this level is extremely inefficient. Detailed inspections of the boilers indicate they must be replaced no later than 1996 to avoid total plant failure and loss of heat to mission essential

4. PROJECT TITLE UPGRADE FACILITIES HEATING SYSTEM	5. PROJECT NUMBER XQPZ920033	
<p>facilities. Several companies that manufactured HTHW boilers have discontinued this product line or have gone out of business. Therefore, the availability of replacement parts to properly maintain these boilers is questionable for the future. Only one known company continues to manufacture boilers larger than 10 million BTUH. Further, boiler control and safety systems are obsolete and require replacement. Existing pumps and valves require major overhaul or replacement. The underground distribution system has developed several major leaks in its outer casing and complete failure is imminent. The exterior metal skin of the heat plant building is perforated with rust and requires replacement. A detailed technical analysis of available options was conducted to determine the best course of action. The analysis reflects the most economical solution is to decentralize the heat plant. The existing heat plant is manned 24 hours a day at a cost of \$260,000 per year. The system proposed will require only periodic inspections and can be remotely controlled and monitored providing significant manpower savings.</p> <p><u>IMPACT IF NOT PROVIDED:</u> A high probability of total heat plant failure, with subsequent loss of heat to mission essential facilities, will continue. Energy will be lost as a result of the inefficient system. The underground distribution system will continue to lose 9,325 million BTUH or \$27,000 per year. The opportunity to save \$287,000 per year in energy and manpower costs will be lost. Failure to fund this project will force the Academy to spend a minimum of \$1.4 million in 1996 to keep the plant operational; an investment in outdated technology which will also prolong unnecessary manpower and energy costs.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". An economic analysis has been prepared comparing the alternatives of decentralization, revitalization and status quo operation. Based on the net present values and benefits of the respective alternatives, decentralization was found to be the most cost efficient over the life of the project.</p>

10. Description of Proposed Construction: Two-story facility with concrete foundation, masonry walls, structural steel frame, sloping roof system, fire protection system, utilities, elevator, site improvements, demolition and asbestos removal, and all necessary support. Air Conditioning: 60 Tons.				
11. REQUIREMENT: As required. PROJECT: Construct a Squadron Operations/Aircraft Maintenance Unit (Sq Ops/AMU) facility. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment project. It is required to comply with Air Force guidance to build Objective Wing squadrons by combining aircraft operators with flightline maintainers. The consolidation relocates flyers and maintainers out of undersized, interim, and dispersed facilities into a functional and adequately sized structure to support large framed aircraft. Space is required for Ops/AMU management support, flight planning, mobility office, briefing/debriefing, training and testing, tool rooms, technical order library, flying/ground safety, standardization/evaluation, locker rooms, bench stock, and scheduling. In addition, an elevator is required to comply with the Americans With Disabilities Act of 1990. This consolidation is consistent with the Air Mobility Command initiative to bring the command's Sq Ops/AMU facilities up to minimum Air Force standards. These efficiencies are essential to maintain mission tasking rates in the Air Mobility Command. CURRENT SITUATION: There are no adequate facilities to support wide framed aircraft consolidated Sq Ops/AMU operations at Dover AFB. The AMU's are housed in interim facilities which are approved for use only until this project is completed. The airlift operation's squadrons are housed in substandard and physically separated facilities. These

<p>facilities are crowded and inefficient. Additional space is required for planning, briefing, administration, storage and issue of parts, flying clothing and equipment. Upon completion of this project two substandard facilities totalling 41,000 SF will be demolished.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Operations, maintenance, and support personnel will remain in separate, undersized, and interim buildings and will never develop the cohesiveness necessary to become an efficient and effective operational squadron. The geographic separation will continue to hamper the lines of authority and communication throughout the squadron. Essential squadron operations and logistic functions will continue to require additional work-arounds that will degrade mission performance.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, addition/alteration, and new construction) was done. It indicates new construction is the only option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Alters existing nine-story facility to provide room-bath-room configuration. Convert existing centrally located latrines to storage areas. Replace existing windows, upgrade utility systems, upgrade interior walls, and upgrade lobby and vending areas. Project includes fire protection and necessary support. Air Conditioning: 300 Tons. Grade Mix: 378 E1-E4.					
11. REQUIREMENT: As required. PROJECT: Alter dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation, safety, and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 378 personnel: 378 E1-E4, with a maximum utilization of 378 personnel. CURRENT SITUATION: The existing nine-story dormitory facility was constructed in 1968 to design standards and criteria in effect at that time. This dormitory has received no major upgrades or renovations since originally constructed. Dormitory residents must share central latrine facilities offering little, if any, personal privacy. Existing room walls are painted concrete masonry unit (CMU) block providing an extremely austere living environment for dormitory occupants and lack adequate sound attenuation preventing shift workers from getting necessary rest. Further, the antiquated lighting fixtures do not provide adequate illumination and contribute to the poor living environment. Existing

10. Description of Proposed Construction: A three-story structure with reinforced concrete foundation and floor slabs, masonry walls, roof, fire protection, site improvement and demolition of an existing facility. Includes room-bath-room modules, laundries, storage and lounge areas and all supporting facilities. Provide a one-story, vaulted ceiling structure, masonry construction, fire protection and site improvements. Air Conditioning: 70 Tons. Grade Mix: 72 E1-E4.					
11. REQUIREMENT: As required. PROJECT: Construct dormitory and training facility. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 72 personnel: 72 E1-E4, with a maximum utilization 72 personnel. CURRENT SITUATION: The existing three-story dormitory facility was constructed in 1955 to design standards and criteria in effect at that time. This dormitory has received no major upgrades or renovations since originally constructed. Each room is less than 150 square feet and personnel share a 25 square foot shower/latrine area between each set of rooms. Existing room walls are painted concrete masonry unit (CMU) block providing an extremely austere living environment for dormitory occupants and lack adequate sound attenuation preventing the Honor Guard members from getting necessary rest. There is no centralized storage area causing wasted living space and cluttered rooms. This facility provides

10. Description of Proposed Construction: Construct a fire training facility to include: a lined and environmentally acceptable fire training pit; large-frame aircraft mockup; tank for propane gas; pumps, piping, and storage system for fuel and water; lighting; fencing; access road; and necessary support.					
11. REQUIREMENT: 1 EA ADEQUATE: 0 SUBSTANDARD: 1 EA <u>PROJECT:</u> Construct a fire training facility. (Current Mission) <u>REQUIREMENT:</u> This is a Level I environmental compliance requirement. The existing fire training pit does not meet the Clean Water Act (CWA) requirements (40 CFR 122.26). Construct a fire training facility (FTF) which meets CWA, Clean Air Act, and Resource Conservation and Recovery Act (RCRA) requirements as applicable. Provide an impermeable liner below the burn area, and a holding pond to prevent contamination of soil and ground water. Live fire training is an established Federal Aviation Administration (FAA) quarterly training requirement for fire fighters to maintain a high level of proficiency. It is Air Force policy to have a facility, which complies with all applicable criteria and environmental requirements, on every major Air Force installation to meet fire training requirements. In this case, this proposed new facility will consolidate the fire training functions for Cape Canaveral Air Force Station (CCAFS) and Patrick AFB. <u>CURRENT SITUATION:</u> The old fire training areas at Cape Canaveral and Patrick AFB violated Environmental Protection Agency (EPA) and Florida state pollution standards, and were closed in 1984 and 1991, respectively. Since these closings, firefighters at these bases have not had a crash rescue fire training facility on base at which to train and maintain the required level of proficiency in both fire fighting and the protection of

<p>Air Force personnel and resources. Their training has been accomplished at other locations and has consisted only of structural fire fighting once each year; they have had no opportunity for crash rescue fire training.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Fire fighters at Cape Canaveral and Patrick AFB will continue to have no facility for crash response fire training. Without the stress and realism possible only with live fires, these fire fighters will continue to lose proficiency in combating fires. Potential for loss of life and aircraft is significantly increased. Federal Aviation Administration and Air Force requirements and standards will not be met.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". All known alternative options were considered during the development of this project, and new construction was determined to be the optimum solution.</p>

10. Description of Proposed Construction: Remove 3 to 4 inches of runway surface and overlay with new asphalt; replace damaged concrete slabs on both ends of the runway; re-paint pavement markings, install airfield lighting, utilities, and necessary support.					
11. REQUIREMENT: 343,300 SY ADEQUATE: 0 SUBSTANDARD: 343,300 SY PROJECT: Repair a runway. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. Provide adequate airfield surfaces to continue existing flying missions at Eglin Air Force Base. This particular runway serves the 46th Test Wing, the 33rd Fighter Wing and the Okaloosa County Air Terminal. The primary aircraft operating out of Eglin AFB include the F-15, F-16, F-111, DC-9, KC-135 and the C-130. As of April 1992, transient and permanently assigned fighter/test aircraft logged over 39,000 take-offs and landings per year from the base's two runways. CURRENT SITUATION: There are cracked and spalled concrete slabs and weathering on this runway, and the asphalt is rapidly deteriorating. Various concrete slabs in the touchdown areas at both ends of the runway are shattered and need to be replaced. Pieces of aggregate have come loose, creating foreign object damage (FOD) hazards which could be ingested into jet engine intakes. FOD causes thousands of dollars worth of engine damage and aircraft crashes from resulting engine failure. Excessive maintenance is required to maintain safety from FOD. The Air Force Civil Engineering Support Agency at Tyndall AFB, Florida, is responsible for evaluating the performance and conditions of airfield pavements throughout the Air Force. In April 1992 they evaluated this pavement and recommended that the entire runway be repaired as soon as possible.

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab, pre-engineered metal building structure with prefinished metal walls, standing seam metal roof, fire suppression system, monorail and hoist utilities, and other necessary support as required to provide a complete and usable facility. Area includes one large work bay with general purpose maintenance and support areas attached. Air Conditioning: 50 Tons.					
11. REQUIREMENT: 24,000 SF ADEQUATE: 0 SUBSTANDARD: 0 PROJECT: Construct a C-130 aerial delivery facility. (New Mission) REQUIREMENT: An adequate fully covered facility is required for parachute packing, maintenance, rigging, and buildup of 10,000 pound pallets used for low altitude aircraft parachute extraction system delivery. Area includes one large work bay with general purpose maintenance and support areas attached. Facility requirement includes classrooms, maintenance support, and storage space. The aircraft pallets which are prepared in this facility are used by C-130 cargo aircraft for aerial delivery of military supplies and equipment in direct support of training and contingency missions. This requirement supports beddown of the composite wing. CURRENT SITUATION: Prior to beddown of C-130 aircraft and the new composite wing, the base had only fighter aircraft as its mission. There is no aerial delivery facility, large aircraft maintenance hangar, or any other facilities at the installation which can be used to adequately meet this requirement. This work is currently accomplished using a hangar facility that is not fully enclosed, improperly configured, and not large enough to accommodate aerial delivery requirements. Operations cannot be accomplished efficiently and professionally, and equipment is constantly

10. Description of Proposed Construction: All materials and labor required to construct facilities of steel, split faced masonry, reinforced concrete and all utilities, fire suppression systems, and all necessary support. Also construct a classified materials storage and review area within the operations facility. Air Conditioning: 60 Tons.					
11. REQUIREMENT: 60,000 SF ADEQUATE: 36,000 SF SUBSTANDARD: 0 PROJECT: Construct a Squadron Operations/ Aircraft Maintenance Unit facility (Sq Ops/AMU). (New Mission) REQUIREMENT: A combined functions facility is required to provide both an adequate squadron operations space for planning, briefing, administration, support, and critique of combat air crews for C-130 aircraft, and adequate logistics space for a C-130 AMU to include equipment storage, tool kit storage, tool crib, bench stock, and offices. This action supports the beddown of the Composite Wing at Moody AFB. The C-130's squadron began arriving during the third quarter of FY 94 and the squadron is now at full strength. CURRENT SITUATION: Space does not exist to house an additional squadron operations and AMU for a C-130 aircraft squadron. The current force structure is three F-16 squadrons. The projected Composite Wing force structure is four squadrons (two F-16, one A/OA-10, and one C-130). The base currently has facilities for only 3 squadrons. The C-130 squadron, which is already at Moody, is using a fighter hangar for its squadron operations facility. However, this facility does not provide the necessary room, equipment, or support to properly conduct mission planning and briefings. It also does not provide adequate space for logistics/ maintenance functions.

C-130 SQUADRON OPERATIONS/ AIRCRAFT MAINTENANCE UNIT FAC		HTAC943042
<p><u>IMPACT IF NOT PROVIDED:</u> Adequate facilities will not be available to perform essential squadron operations and logistics functions, forcing additional work arounds that will degrade the mission performance of the C-130 squadron and reduce their mission capability. Squadron personnel will continue to perform mission functions in an aircraft maintenance hangar, degrading the existing C-130 mission and limiting maintenance functions for other aircraft in the hangar.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, renovation, upgrade/removal, new construction, leasing) was done. 10. Description of Proposed Construction: Reinforced concrete footings, special foundations, floor slab, supporting superstructure, control tower cab, operations and training areas. Facility includes all site work, utilities, mechanical, electrical, fire protection, backup power systems and an elevator. Existing tower will be demolished. Air Conditioning: 20 Tons.						
11. REQUIREMENT: 1 EA ADEQUATE: 0 SUBSTANDARD: 1 EA PROJECT: Construct a control tower. (Current Mission) REQUIREMENT: This is a Level 1 Commanders' Facility Assessment requirement. Construct an air traffic control tower (86 feet high) with a 540 square foot cab to accommodate 7-9 air traffic control personnel, with air traffic control equipment, crew briefings, operations, and training functions. The existing tower will be demolished, the site will be cleared, and the new tower will be sited so as to provide full coverage of the airfield. CURRENT SITUATION: The existing control tower was constructed in 1955. The tower cab, which has an area of only 225 square feet, was originally configured to accommodate three controllers and the standard complement of 1950s vintage equipment. Since then, both the mission of the base and the characteristics of the aircraft supported have changed. As a result, more air traffic controllers and more equipment is needed to cover present day air operations. The control tower work center has 21 controllers and 1 safety officer assigned to provide staffing on a seven-days-a-week, 24-hours-a-day basis. Also, this project, in providing a new facility which is appropriately sized and sited, will: enable the controllers to function more efficiently; improve safety of operations for personnel and aircraft; accommodate the numerous changes that have been made over the

<p>years in airport configuration and air traffic patterns; and escape the visual obstructions which interfere with operations at the old, existing facility. Air traffic control operations at Moody number 62,000 landings and takeoffs annually.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The base will continue using a substandard and outdated control tower facility. Overcrowded cab conditions will remain a serious problem that limits air traffic controller mobility, prevents functional and efficient operational procedures, and degrades controller communications with pilots. These conditions, coupled with the additional effort required to safely control multiple aircraft, create conditions that jeopardize pilot safety and may cause loss of personnel and aircraft.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide" or Air Force Manual 86-2, "Standard Facility Requirements". The scope for this project was established in accordance with the Air Force Design Guide for Air Traffic Control Towers. Upon completion of this project, the existing tower will be demolished. A preliminary analysis of reasonable options for accomplishing this project (status quo, modify the existing tower, and new construction) was done. It indicates new construction is the only option that will meet operational requirements. Status quo and tower modification would not eliminate all operational deficiencies. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab, structural steel frame with insulated sheet metal walls and insulated roof system. Building to provide capability for aircraft washing with drainage tied into pollution control system. Includes support space, utilities, access apron and other necessary work as required. Air Conditioning: 10 Tons.					
11. REQUIREMENT: 26,000 SF ADEQUATE: 0 SUBSTANDARD: 0 PROJECT: Construct a C-130 aircraft washrack facility. (New Mission) REQUIREMENT: An adequate facility, properly sized and configured is needed for the recurring requirement to wash and clean C-130 aircraft. Effective washing (corrosion control) requires chemical agents for proper cleaning to remove built-up salts, oils, dirt and other corrosive type materials that will deteriorate the aircraft. This facility will be utilized solely to clean aircraft. Sanding aircraft in preparation for painting and repainting activities will not be performed in this facility. CURRENT SITUATION: The existing washrack facility cannot physically accommodate the new mission aircraft being assigned to the base. Environmental constraints prevent the new aircraft from being washed on the existing apron as a permanent solution for this requirement. Existing hangars throughout the flightline area are used for essential aircraft maintenance and are not available for use in meeting this requirement. In addition, there is no hangar on the base that can physically accommodate the C-130 aircraft. The workarounds for the temporary washrack include providing minimal capability to capture oils and solvents in a closed loop oil/water separator. A water supply line is being installed to provide interim capability to wash C-130's on the aircraft parking apron.

AIR FORCE		
3. INSTALLATION AND LOCATION		
MOODY AIR FORCE BASE, GEORGIA		
4. PROJECT TITLE	5. PROJECT NUMBER	
C-130 AIRCRAFT WASHRACK FACILITY	HTAC943040	
<p>Aircraft washing activities will be hampered because outdoor washing of the aircraft in the heat and sun tends to dry the cleaning agents quicker than the aircraft can be rinsed causing extra water and time for a cleaning operation. The temporary washrack will also not be provided with a heated water system thus reducing the efficiency of the washing operation. Personnel must perform the cleaning year round while exposed to extremes of heat and cold temperatures.</p> <p><u>IMPACT IF NOT PROVIDED:</u> New C-130 aircraft and support equipment will not receive adequate cleaning to ensure corrosion prevention at Moody AFB. This will subject aircraft and equipment to shorter lifespans because corrosion maintenance requirements can not be met at the base. It is not practical or cost effective to have this work accomplished at other installations.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

10. Description of Proposed Construction: Concrete foundation and floor slab, structural steel, steel siding, and built-up roof. Includes approach pavements, fire protection system, mechanical ventilation, and fume sensing and alarm system. The project includes all required utilities and site work.					
11. REQUIREMENT: 50,180 SF ADEQUATE: 15,180 SF SUBSTANDARD: 0 <u>PROJECT:</u> Construct an aircraft fuel systems maintenance dock to support the Joint Surveillance Target Attack Radar System (JSTARS). (New Mission) <u>REQUIREMENT:</u> A permanent facility of adequate size and configuration is required to provide all-weather maintenance capability for fuel systems and fuel system components of the JSTARS aircraft. This project is critical to the beddown of Joint STARS, which is an Air Force/Army program for real-time detection, tracking, and attack of moving and stationary ground targets. The system will consist of an airborne segment on board E-8C configured aircraft and a mobile ground communication segment. <u>CURRENT SITUATION:</u> There are no fuel system maintenance dock facilities large enough to support JSTARS aircraft at Robins AFB. All existing facilities are fully utilized by currently assigned aircraft at the base. <u>IMPACT IF NOT PROVIDED:</u> The base will not be able to adequately support the beddown of JSTARS aircraft. There will be no facility available to properly conduct fuel systems maintenance on new mission aircraft. Failure to maintain each aircraft in a safe and ready state will adversely affect the combat mission capability of the Air Force, Army, and Allied battle units. <u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide." However, this project does meet the criteria/scope specified in Air Force Manual

10. Description of Proposed Construction: All work necessary to repair airfield pavements including but not limited to: remove and replace existing asphaltic concrete (AC) pavement and base course, cold plane AC pavement, apply prime coat and tack coat, place 2" AC pavement overlay, seal coat AC pavement, paint pavement striping, and all other necessary support.					
11. REQUIREMENT: 1,342,200 SY ADEQUATE: 258,700 SY SUBSTANDARD: 1,083,500 SY PROJECT: Repair airfield pavements. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. Adequate airfield aprons and taxiways in good condition are required for the safe operation of assigned and transient aircraft. The main apron must be able to accommodate wide body aircraft. CURRENT SITUATION: The original airfield aprons were constructed in 1938 based on the prevailing wheel loads at that time. Piecemeal efforts to maintain, repair and reconstruct the pavements over the years have created a diverse pavement system, causing considerable maintenance and operational problems. The January 1993 Airfield Pavement Evaluation Report by the Air Force Civil Engineering Support Agency rated the apron parking areas fair to poor. It indicated that these areas have medium to high severity distresses and near-term maintenance, repair and reconstruction are required. The airfield pavement evaluation revealed that the existing apron is structurally inadequate for assigned and transient aircraft; and pavement failure has progressed to the point where deteriorating asphalt is a major source of foreign object damage (FOD) to aircraft. IMPACT IF NOT PROVIDED: This project is urgent and its deferral will

REPAIR AIRFIELD PAVEMENTS		KNMD963006
<p>result in further deterioration to the existing pavement causing continuous FOD problems to aircraft. The parking apron and taxiway deterioration will continue to a point where they can no longer safely support aircraft. Failure to repair these essential airfield pavements will prolong a dangerous situation that may lead to aircraft damage and prevent the base from accomplishing its mission.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, relocate, replace in kind, and repair) was done. It indicates there is only one option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Electrical, structural, architectural, and mechanical alterations. Convert dormitory from central latrine to room-bath-room configuration; includes exterior entrances, lounges, storage, fire protection, handicapped access to first floor common areas, landscaping, and all other necessary support. Air Conditioning: 85 Tons. Grade Mix: 36 E5-E6.					
11. REQUIREMENT: As required. PROJECT: Alter dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing that promotes proper rest, relaxation, and personal well-being. Properly designed and furnished quarters which provide some degree of individual privacy are essential to successfully accomplish the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 36 personnel: 36 E5-E6, with a maximum utilization of 72 personnel. CURRENT SITUATION: The facility to be altered was constructed in 1965 to standards in effect at that time. It has central latrines, no private entrances, insufficient noise attenuation for shift workers resting at various hours, and it lacks the necessary amenities found in modern dormitories. IMPACT IF NOT PROVIDED: Substandard living conditions will continue to degrade the morale, productivity and career satisfaction of the enlisted force. ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. An economic analysis has been prepared comparing the alternatives of new construction,

10. Description of Proposed Construction: Develop a 10 acre site to include two steel frame, metal-sided facilities on concrete pads. Include diesel generator, waterwell, pump, piping and storage, and wastewater septic system. Construct helicopter pad, gravel parking lot, gravel access roads, firebreaks, security fencing, target areas and other necessary support.						
11. REQUIREMENT: As required. PROJECT: Construct Idaho Training Range (North Site). (New Mission) REQUIREMENT: A new range is required to provide realistic training for aircrews to maintain combat capability. The range must provide a variety of near-real targets to simulate conditions that can be expected in a real combat scenario. The Class B range at north site will consist of 2 target areas with four target sites. A Class B range can be manned or unmanned and has a scoring capability from the ground, but does not have a Range Control Officer on the ground controlling aircraft. Facilities are required to provide vehicle and range maintenance, and administrative space. The training infrastructure must provide realistic simulated battlefield conditions. To maximize combat efficiency, cost effectiveness and unit readiness, the training infrastructure must be locally available. CURRENT SITUATION: Saylor Creek Range (SCR) is approximately 40 miles southeast of Mt Home AFB and has limited capability for composite wing training. Due to its size, the SCR can not be used in the training of composite force formations, which is a basic composite wing requirement. Composite wing aircraft must fly to distant ranges for other training such as defense indepth, flag exercises, or first look targets. Aircraft must refuel in-flight or refuel at other bases before and/or after the mission. Approximately 3000 hours of flying time are now used in transit to the

4. PROJECT TITLE IDAHO TRAINING RANGE (NORTH SITE)	5. PROJECT NUMBER QYZH963014	
<p>more distant ranges in Utah and Nevada. Because of the increased flight time required for these training activities and the additional fuel consumed, obtaining this training on a routine basis is neither practical nor cost-effective. The distant locations of these aircrew training ranges necessitate not only additional flying time but also the associated requirement and cost for additional tanker missions for in-flight refueling, when needed. The SCR can not support the full scale composite force training requirement because it does not provide the air space and range infrastructure to allow the use of the full range of target options such as: forward edge of the battle area, battlefield air interdiction, and deep interdiction.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The composite wing will not have the required local training facilities to meet their current combat training needs. The wing will be forced to continue using distant training ranges, and this necessitates increased sortie lengths, adds associated tanker missions for in-flight refueling when required, causes extra fuel consumption, and reduces total training time on the ranges for aircrew members to improve and maintain combat proficiency.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". The land is being obtained through a land exchange between The State of Idaho and the Bureau of Land Management. Some private land may be purchased using funds provided in the Military Construction Appropriations Act, of 1994. A companion project to develop the south site of the ITR is being programmed in FY 97. A preliminary analysis of reasonable options for accomplishing this project (status quo, upgrade, new construction) was done. New construction is the only option that can meet mission requirements. As a result, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Construct a 0.85 million gallon per day (MGD) wastewater treatment plant to provide advance wastewater treatment and sludge disposal. Provide construction, operation and discharge permits, operations and maintenance (O&M) manuals and a one year start-up contract.					
11. REQUIREMENT: As required. PROJECT: Construct a wastewater treatment and disposal plant.(Current Mission) REQUIREMENT: This is a Level I environmental compliance requirement. The current wastewater system does not provide the level of treatment required to maintain regulatory compliance. The proposed wastewater treatment plant will provide advance treatment to meet local, state and federal water pollution control and Resource Conservation and Recovery Act (RCRA) requirements. Pretreatment facilities will be constructed upstream of the new wastewater treatment plant to protect the wastewater treatment plant from the discharge of heavy metals and toxic organics in excess of the limits established by the Clean Water Act (CWA) and RCRA regulations. CURRENT SITUATION: Mt Home AFB is on EPA's National Priority List. Domestic and industrial wastewaters are being treated on base in unpermitted lagoons. These lagoons were partially constructed over abandoned sanitary landfill trenches. The base does not have a state of Idaho land application permit. A 1989 utilities survey estimated that the percolation rate of the existing lagoons is on the order of 0.40 to 0.45 in/day. The state of Idaho leakage standard for existing lagoons is a maximum of 0.125 in/day. During the winter, water inflow into the lagoons exceeds water outflow through percolation/evaporation. The lagoons gradually fill up. In the spring the lagoons are drawn down by pumping

<p>the wastewater from the lagoons into three infiltration basins until the percolation/evaporation rate of the lagoons once again exceeds inflow and the annual cycle repeats itself. Mt Home AFB has little control over operational parameters of the current treatment system and cannot control or contain prohibited material from reaching the environment.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Continued operation of the base's existing unlined lagoons can result in enforcement actions by the state and the Environmental Protection Agency (EPA) under either the solid and hazardous waste regulations or ground water protection regulations. Continued violations may result in fines and penalties up to \$25,000 per day per violation.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: A three-story structure with reinforced concrete foundation and floor slabs, masonry walls, roof, fire protection, and site improvements. Includes room-bath-room modules, laundry, storage and lounge areas, and all necessary support. Air Conditioning: 100 Tons. Grade Mix: 144 E1-E4.					
11. REQUIREMENT: As required. PROJECT: Construct a dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 144 personnel: 144 E1-E4, with a maximum utilization of 144 personnel. CURRENT SITUATION: Currently there are not enough adequate dormitories to meet the requirements of unaccompanied enlisted personnel at this installation. In addition to the personnel living in existing substandard facilities, there are currently in excess of 200 E-1 through E-4 enlisted personnel living off-base due to lack of on-base quarters. This project will significantly reduce this existing deficit and reduce the need for \$1.2 million payment of BAQ/VHA/BAS annually. IMPACT IF NOT PROVIDED: Unaccompanied enlisted personnel will have to continue living off-base resulting in excess of \$1.2 million payment of BAQ/VHA/BAS annually. ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. An economic analysis has

<p>been prepared comparing alternatives of new construction or status quo (housing enlisted personnel off-base paying BAQ/VHA/BAS). Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost-effective over the life of the project. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection for Facilities. Cost for fire protection is shown separately since this new standard is not yet reflected in OSD approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: A two-story structure with reinforced concrete foundation and floor slab, masonry walls, and roof deck system, sprinkler protection, site improvements, and all necessary support. Includes demolition of two facilities and asbestos removal/disposal. Air Conditioning: 65 Tons. Grade Mix: 60 04-010.					
11. REQUIREMENT: 184 PN ADEQUATE: 124 PN SUBSTANDARD: 0 PROJECT: Construct a global reach planning center visiting quarters. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment (CFA) project. Adequate living quarters are required to accommodate TDY personnel at the Global Reach Planning Center. On-base quarters are essential to insure that the TDY personnel attending conferences at HQ AMC are provided an environment conducive to successful accomplishment of the increasingly complicated and important jobs these personnel must perform. Areas required include living, administrative, housekeeping, guest laundry, reception, and lobby. In addition, an elevator is required to comply with the Americans With Disabilities Act of 1990. CURRENT SITUATION: The creation of HQ AMC at Scott AFB from the Military Airlift and Strategic Air Commands has generated an increase in TDYs to Scott. Since the stand up of AMC on 1 Jun 93, the Headquarters has sponsored over 160 conferences. The larger conferences include over 225 participants. The existing VOQs cannot accommodate the high volume of visitors to USTRANSCOM, HQ AMC, and Air Force Command and Control Communication Computer Agency (AFC4A). In order to meet this requirement, an average of 100 off-base quarters are contracted each day, which cost approximately \$4,000 per day. The average distance to the off-base

GLOBAL REACH PLANNING CENTER VISITING QUARTERS	VDYD953019	
<p>quarters is eleven miles. Two substandard facilities totaling 51,000 SF will be demolished as a result of this project.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Personnel attending conferences at the Global Reach Planning Center will continue to be housed off-base at a cost of \$2,400 per day. Splitting up conference attendees/TDY personnel in separate on-base and/or off-base quarters will continue to greatly complicate planning and scheduling activities and increase logistical costs.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of the Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of new construction, revitalization, and contract quarters. Based on the net present value and benefits of the respective alternatives, new construction was found to be the most efficient over the life of the project. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection for Facilities, published 15 January 1994. Cost for fire protection is shown separately since this new standard is not yet reflected in OSD approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Two-story facility with concrete foundation, masonry walls, structural steel frame, sloping roof system, fire protection system, utilities, elevator, site improvements, and necessary support. Air Conditioning: 85 Tons.					
11. REQUIREMENT: As required. <u>PROJECT:</u> Construct a KC-135 Squadron Operations/Aircraft Maintenance Unit (Sq Ops/AMU) facility. (New Mission) <u>REQUIREMENT:</u> This project is required to comply with Air Force guidance to build Objective Wing squadrons by combining aircraft operators with flightline maintainers. The consolidation relocates flyers and maintainers out of undersized and dispersed facilities into a functional and adequately sized structure to support the beddown of 18 additional KC-135s in the 2nd quarter of FY94. A total of 48 KC-135s will be in place by the 4th quarter of FY95. Space is required for Ops/AMU management support, briefing/debriefing, flight planning, training and testing, flying/ground safety, tool rooms, bench stock, mobility office, technical order library, standardization/evaluation, life support, locker rooms, and scheduling. In addition, an elevator is required to comply with the Americans With Disabilities Act of 1990. This consolidation is consistent with the Air Mobility Command (AMC) initiative to bring the Sq Ops/AMU facilities up to minimum Air Force standards. These efficiencies are essential to maintain mission tasking rates in AMC. <u>CURRENT SITUATION:</u> Squadron operations and the aircraft maintenance units are dispersed among three severely undersized and physically separated facilities. These facilities have historically suffered overcrowding, a condition further exasperated with the beddown of additional KC-135s and

4. PROJECT TITLE	5. PROJECT NUMBER	
KC-135 SQUADRON OPERATIONS/ AIRCRAFT MAINTENANCE UNIT FAC	PRQE963500	
<p>the unification of the operators and maintainers. The physical separation creates fragmented lines of communications/authority. Aircrews and maintenance personnel spend many hours away from their duty location in an effort to obtain parts, organizational and mobility equipment, and required training. These facilities are inadequately sized and not properly configured to support requirements.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Operations, maintenance, and support personnel will remain in scattered and undersized buildings and will never develop the cohesiveness and efficiency required by an operational organization. Full implementation of the more effective Objective Wing squadron and beddown of KC-135s will be degraded. Essential squadron operations and logistic functions will continue to require additional work-arounds that will degrade mission performance.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of the Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, addition/alteration, and new construction) was done. It indicates new construction is the only option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Alter a three-story dormitory. Includes upgrading the mechanical and electrical system, interior finishes, installation of individual storage lockers, converting flat roof to a sloped roof, providing game/lounge rooms, laundry rooms, site improvements, asbestos abatement, and necessary support.
Air Conditioning: 50 Tons. Grade Mix: 62 E1-E4.

11. REQUIREMENT: As required.

PROJECT: Alter dormitory. (Current Mission)

REQUIREMENT: This is a Level I Commander's Facility Assessment project. It is a major Air Force objective to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 62 personnel: 62 E1-E4, with a maximum utilization of 62 personnel.

CURRENT SITUATION: The facility to be upgraded was constructed in 1970. Inefficiencies include inadequate lighting, poor insulation and sound attenuation, and obsolete electrical and mechanical systems. No major maintenance, repairs or improvements have been made to the interior finishes since the facility was constructed 24 years ago.

IMPACT IF NOT PROVIDED: Substandard living conditions will persist and morale, productivity, and career satisfaction of the enlisted force will continue to be degraded.

ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. An economic analysis has been prepared comparing the alternatives of new construction,

<p>revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, alteration was found to be the most cost effective over the life of the project. Fire protection system for this project meets new standards established in MIL-HNBK 1008B, Fire Protection for Facilities, published 15 January 1994. Cost for fire protection is shown separately since this new standard is not yet reflected in OSD approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Provide facilities to deice aircraft and recover, recycle, and dispose of the used deicing fluid. Includes sloped pad to drain to center catch basin, pumps to a storage tank, and necessary support.						
11. REQUIREMENT: 1 SY ADEQUATE: 0 SUBSTANDARD: 0 <u>PROJECT:</u> Construct a deicing pad. (Current Mission) <u>REQUIREMENT:</u> This is a Level I environmental compliance requirement. Construction of an aircraft deicing chemical recovery facility will provide a centralized deicing location for the aircraft and a means to recover the used deicing fluid. This will prevent the deicing fluid from being released into the waterways of the base which would violate the Kansas Department of Health and Environment (KDHE) limit of seven mg/L for propylene glycol and prevent the inevitable Notice of Violation. <u>CURRENT SITUATION:</u> During deicing operations, a section of the ramp is closed to other aircraft traffic, a trench drain serving the area is blocked, and deicing fluid is pumped out of the trench. A pavement sweeper is also used to recover the surface fluid which does not enter the trench. The used deicer chemical is disposed of through Defense Reutilization and Marketing Office. Aircraft deicing operations in 1991 resulted in excess levels of propylene glycol in the waterways flowing off base One sample indicated a level of 293 mg/L. Excessive levels of propylene glycol severely impacted the waterways, resulting in strong odors from the creek, complaints from residents near the creek, investigation by KDHE and the Environmental Protection Agency, and the issuance of a 7 mg/L limit on the propylene glycol levels in waterways flowing off base. A Notice of Violation has been issued but action by the KDHE is being held in abeyance as a result of programming this project in

10. Description of Proposed Construction: Reinforced concrete foundations for several facilities, concrete paved bomb assembly area, metal walls with maintenance free exterior, insulated roof, renovate facility for academic training, and all necessary support. Air Conditioning: 40 Tons.				
11. REQUIREMENT: As required. PROJECT: Construct a B-52 Training Complex. (New Mission) REQUIREMENT: This project is part of a HQ ACC initiative to consolidate all B-52 crew training at one location. The base requires these facilities to perform its strategic bomber training mission. Special conference/vault areas are required to conduct secret cleared briefings. Additional munitions facilities are required to store and generate weapons to support training missions. Renovation of an existing facility is required to provide sufficient classroom, conference areas, and laboratories. CURRENT SITUATION: Current facilities are already dedicated towards supporting existing mission requirements. Facilities to support the academic requirement are available, however they need to be converted into conference/classroom configurations. In addition, security restrictions require special conference/vault areas. IMPACT IF NOT PROVIDED: The strategic mission training program will not be administered. Bomber crew members will not be provided the training and experience necessary to insure mission success. Sufficient munitions facilities are absolutely essential to support the mission of the formal training program. ADDITIONAL: There is no criteria/scope for this project in Part II of the Military Handbook 1190, "Facility Planning and Design Guide". However,

10. Description of Proposed Construction: Remove 41 underground storage tanks, upgrade 6 underground storage tanks, install 24 new underground storage tanks and 17 new aboveground storage tanks (ASTs). Work includes providing leak detection, corrosion protection and spill/overflow prevention systems, screen filters, site work, utilities and necessary support.					
11. REQUIREMENT: As required. PROJECT: Remove, replace, and upgrade underground fuel storage tanks. (Current Mission) REQUIREMENT: This is a Level II environmental compliance project. This project is required to upgrade all underground storage tanks (USTs) regulated by 40 CFR 280 to new standards by December 1998. The Environmental Protection Agency (EPA) has set standards that require all regulated USTs to have leak detection and corrosion protection, and all ASTs to have spill/overflow prevention systems. If USTs are to be replaced, Air Force policy is to replace them with aboveground tanks or to relocate them into underground vaults wherever possible. CURRENT SITUATION: The underground fuel tanks at Andrews AFB do not meet federal law (40 CFR 280) and state requirements for leak detection and cathodic protection. All of the regulated USTs require annual integrity (tightness) testing, daily fluid level monitoring and monthly inventory reconciliation and control. The existing deficiencies must be corrected by December 1998 to prevent violation of federal regulation. IMPACT IF NOT PROVIDED: Failure to bring the USTs into environmental compliance will result in Andrews AFB receiving a Notice of Violation (NOV) from the EPA. This will ultimately result in fines and unfavorable publicity for the Air Force and DoD. All tanks must meet regulations or

10. Description of Proposed Construction: A three-story structure with reinforced concrete foundation and floor slabs, masonry walls, roof, fire protection, and site improvements. Includes room-bath-room modules, laundry, storage, and lounge areas, demolition of five dorms and all necessary support. Air Conditioning: 80 Tons. Grade Mix: 108 E1-E4.					
11. REQUIREMENT: As required. PROJECT: Construct a dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment project. It is a major Air Force objective to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 108 personnel: 108 E1-E4, with a maximum utilization of 108 personnel. CURRENT SITUATION: There are currently not enough adequate dormitories to accommodate the unaccompanied enlisted personnel at this installation. Existing substandard facilities with interior hallways and central latrines do not provide semi-private baths, adequate control of heating and air conditioning, and sufficient room-to-room noise attenuation to adequately house enlisted personnel. This project for 192 personnel allows for the demolition of five small disfunctional, and substandard dormitories totalling 67,500 square feet. These five substandard facilities currently house 140 personnel who will be relocated to the new dormitory. To further reduce the substandard condition, an alteration project for two dormitories is programmed in FY97.

10. Description of Proposed Construction: Construct a fire training facility to include: a lined and environmentally acceptable fire training pit; aircraft mockup; tank for propane gas; pumps, piping, and storage system for fuel and water; lighting; fencing; roads; and necessary support.					
11. REQUIREMENT: 1 EA ADEQUATE: 0 SUBSTANDARD: 1 EA <u>PROJECT:</u> Construct a fire training facility. (Current Mission) <u>REQUIREMENT:</u> This is a level I environmental compliance requirement. The existing fire training pit does not meet the Clean Water Act (CWA) requirements (40 CFR 122). Construct a fire training facility which meets CWA, Clean Air Act and Resource Conservation and Recovery Act requirements as applicable. Provide an impermeable liner below the burn area, and a holding pond to prevent contamination of soil and groundwater. Live fire training is an established Federal Aviation Administration (FAA) quarterly training requirement for fire fighters to maintain a high level of proficiency. It is Air Force policy to have a facility on every major Air Force installation to meet fire training requirements which complies with all applicable criteria and environmental requirements. <u>CURRENT SITUATION:</u> The existing facility does not meet the CWA requirements and has been closed since January 1994; thus, live fire training cannot currently be conducted. Minimal training is conducted using a mock-up structure with no fire or heat capability. This training does not comply with Air Force or FAA requirements. There are no environmentally approved live fire training facilities in the local area. The existing site is currently designated as an Installation Restoration Program site and is undergoing remedial investigation funded by Defense Environmental Restoration Account.

3. INSTALLATION AND LOCATION		
COLUMBUS AIR FORCE BASE, MISSISSIPPI		
4. PROJECT TITLE		5. PROJECT NUMBER
FIRE TRAINING FACILITY		EEPZ963006
<p><u>IMPACT IF NOT PROVIDED:</u> Fire fighters will not be able to meet Air Force and FAA quarterly training requirements for remaining proficient in aircraft crash fire fighting and rescue techniques. The safety of both the firefighters and aircraft accident victims will continue to be compromised by lack of proper training. Traveling to other installations to conduct the fire training exercises is not feasible for the fire fighters because of cost and the level of manning required to remain at the installation to support the mission.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

10. Description of Proposed Construction: Three-story structure with reinforced concrete foundation and floor slabs, masonry walls and roof system. Includes storage and laundry areas, and all utilities, HVAC, landscaping, fire protection, and support as required. Air Conditioning: 350 Tons. Grade Mix: 120 E1-E4.				
11. REQUIREMENT: As required. PROJECT: Construct a student dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Adequate on-base living quarters are required to accommodate enlisted students and to ensure that an environment conducive to studying is available. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 120 personnel: 120 E1-E4, with a maximum utilization of 120 personnel. CURRENT SITUATION: There are currently not enough adequate dormitories to accommodate the unaccompanied enlisted personnel at this installation. Existing substandard facilities were constructed 40 years ago to design standards and criteria in effect at that time. These facilities have central latrines, inadequate lighting, poor insulation and sound attenuation, obsolete electrical and mechanical systems, and foundation problems. IMPACT IF NOT PROVIDED: Adequate living quarters will continue to be unavailable and result in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel. High building

<p>maintenance and operation costs will continue to impact limited base resources and affect the accomplishment of mission related tasks.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection for Facilities. Cost for fire protection is shown separately since this new standard is not yet reflected in OSD approved unit cost factors for dormitories. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost effective over the life of the project.</p>

10. Description of Proposed Construction: Level and grade site; install drainage tile and pipe, and tie into drainage system; construct rigid pavement aprons and taxiway and a munitions convoy route rated for heavy loading. Install hydrant fueling outlets and other necessary support.					
11. REQUIREMENT: 773,141 SY ADEQUATE: 758,141 SY SUBSTANDARD: 0 PROJECT: Add to B-2 aircraft apron, convoy road, and taxiway. (New Mission) REQUIREMENT: This project constructs access pavements to the new FY96 maintenance docks (docks 11 & 12) from existing taxiway. It also provides access pavement for munitions trailers to enter the back side of the new maintenance docks from an existing convoy road. Munitions must be loaded from the back of the aircraft per system design. Two hydrant outlets are required to support refueling operations for the aircraft. CURRENT SITUATION: There are no existing access aprons, taxiways, or munitions convoy roads for providing access to the new aircraft maintenance docks #11 and #12, which are being constructed in FY96. No refueling outlets are currently available to support refueling for the aircraft. IMPACT IF NOT PROVIDED: There will be no pavement areas surrounding the new maintenance docks to allow access by the aircraft or munitions vehicles and trailers. There will also be no hydrant refueling outlets to support the aircraft which are sheltered and maintained in the new docks. ADDITIONAL: There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". The scope of this project was developed with participation by the prime contractor.

10. Description of Proposed Construction: Addition to an existing simulator facility which will include site improvements, foundations, reinforced concrete, masonry and steel structure, electric, water, high bay simulator area with overhead crane, fire protection, security and communication systems, raised computer floors, pavements, red/black power separation, and other necessary support. Air Conditioning: 150 Tons.					
11. REQUIREMENT: 35,000 SF ADEQUATE: 20,000 SF SUBSTANDARD: 0 PROJECT: Add to a B-2 flight simulator training facility. (New Mission) REQUIREMENT: The B-2 mission requires an adequate facility, properly sized and configured, to house three flight simulators for classified mission qualification and continued flight training. This addition to the existing simulator facility will house the third flight simulator and associated areas to support B-2 classified advanced upgrade training. Associated support spaces include instructor offices, administrative support areas, environmentally controlled computer support, weapon systems operator training areas, security control, mechanical and equipment maintenance rooms, and contractor support areas. A secure facility is required for highly classified materials and training simulations. Red/black electrical power separation is necessary to prevent the unauthorized access to classified signal emissions. CURRENT SITUATION: The existing Combat Crew Training Squadron (CCTS) facility currently houses two equipment simulators and cannot accommodate the third equipment simulator that has been purchased as part of the initial buy of B-2 aircraft. The simulator is in development and is scheduled for delivery in FY 97. The first two simulators support the day-to-day training requirements of the B-2 combat crew training unit and

<p>one operational squadron. The third simulator will be used to provide advanced B-2 training for the second operational squadron. There is no other existing facility available to house the simulator for operation. The simulator will be stored in a secure warehouse until the construction of this project is complete.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Without this project, a facility will not be available for the third simulator. The third simulator will not be available to provide B-2 training. This action will restrict the units ability to meet operational training requirements. Combat training, flight qualification, and emergency and safety procedures training will not be fully performed. The unit's mission readiness will be severely degraded.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of the Military Handbook 1190, "Facility Planning and Design Guide." The scope of this project was developed with participation by the prime contractor. The simulator will be installed by a contractor, with funds from other B-2 appropriations. A preliminary analysis of reasonable options for accomplishing this project (status quo, renovation, new construction) was done. New construction is the only option that can meet mission requirements. Because of this a full economic analysis was not performed. A certificate of exception has been prepared.</p>

Integrated Technical Data System (ITDS), Consolidated Aircraft Maintenance System (CAMS) and security, oil/water separator, fuel piping from hydrant loop, blast deflectors, Consolidated Aircraft Support Systems (CASS), and all support. Retrofit 14 existing B-2 docks with humidity control and utility outlets. Air Conditioning: 130 Tons.					
11. REQUIREMENT: 414,160 SF ADEQUATE: 256,660 SF SUBSTANDARD: 52,500 SF PROJECT: Construct two B-2 aircraft maintenance docks and hydrant fueling system. (New Mission) REQUIREMENT: This project will provide two maintenance docks, a hydrant fueling system, and retrofit existing docks with humidity control and utility outlets. A total of 18 enclosed maintenance spaces are required (14 maintenance docks, 2 maintenance hangars, 1 fuel cell, and 1 corrosion control facility). Fourteen spaces have already been provided and the final 2 docks (13 and 14) will be programmed in a future program. The B-2 maintenance docks are constructed in pairs because they share a common hydrant fuel/CASS area. Covered spaces are required to protect the composite materials used on low observable aircraft. The rear of the dock must be constructed to withstand the jet blast of the aircraft as it taxis out. Rear doors are sized for access by munitions loading trailers. The dock must be securable to prevent unauthorized access. These docks are being constructed in phases to accommodate aircraft delivery and to take advantage of economies of scale. Refueling and CASS provisions are required at each space. CURRENT SITUATION: Three maintenance spaces (fuel cell, corrosion control

<p>and one dock) were provided through the FY 88 MILCON and three in FY 89 MILCON (alter existing hangar = 2 spaces, and 1 dock). Two maintenance docks are in FY 91, two in FY 93, two in FY 94, and two in FY 95. This project constructs two docks and two additional spaces will be programmed in future programs. No additional facilities are available to convert to covered spaces for aircraft already authorized.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Without complete capability to service the aircraft while on the ground, aircraft availability will be reduced and mission effectiveness will suffer. Such tasks as structural and propulsion maintenance, which have to be performed frequently, will take much longer. Repaint downtimes will also increase. Turn-around times will be adversely affected.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". The scope of this project was developed with participation from the prime aircraft contractor. A preliminary analysis of reasonable options for accomplishing this project (status quo, renovation, upgrade/removal, new constuction, leasing) was done. New construction is the only option that could meet mission requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Retrofit two existing B-2 maintenance docks for advanced technology fire protection by installing the inverted deluge system (IDS). Includes utilities, telemetry, fire department tie-ins and necessary support.				
11. REQUIREMENT: As required. <u>PROJECT:</u> Add to and alter dock fire protection systems with installation of IDS advanced technology fire suppression in two of the eight existing docks. (New Mission) <u>REQUIREMENT:</u> National Fire Protection Association (NFPA) and implementing Air Force Policy require aircraft maintenance areas be provided with a pre-action closed-head aqueous film forming foam (AFFF) sprinkler system with rate compensation devices. The IDS is required in all B-2 maintenance docks. A fire must be detected and extinguished within 17-20 seconds to prevent damage or delamination of the composite materials used on the exterior surfaces of the B-2 bomber. <u>CURRENT SITUATION:</u> The development of advanced technology (stealth) composite materials for the exterior surfaces of the B-2 bomber has introduced a shorter time factor for detection and suppression of a fire before damage occurs. Fire protection/suppression technology has been developed and tested to react to this new requirement and must be retrofitted into eight existing B-2 maintenance docks. Two docks were programmed for retrofitting with IDS in FY95 and two more docks will be completed with this project. Another project in a future year will be programmed to complete installation of IDS in the remaining four docks. All future maintenance docks will include IDS during construction. <u>IMPACT IF NOT PROVIDED:</u> The most effective available fire protection technology will not be in place to protect a very valuable and limited Air

10. Description of Proposed Construction: Reinforced concrete foundation and floor slabs, masonry walls, and metal roof. Includes room with private bath modules, laundry facilities, small exercise area, lounge area, TDY processing center, and other necessary support. Air Conditioning: 150 Tons. Grade Mix: 10 O4-O10; 100 E1-E4; 100 E5-E6.						
11. REQUIREMENT: 1,058 PN ADEQUATE: 498 PN SUBSTANDARD: 0 PROJECT: Construct visiting quarters. (Current Mission) REQUIREMENT: This is a Level I Commanders' Facility Assessment requirement. Nellis AFB hosts major exercises designed to maintain and enhance the combat-readiness of Air Force fighter and bomber aircrew and aircraft support personnel. These exercises include Red Flag, Green Flag, and Air Warrior. During these exercises, large numbers of personnel stationed at other installations throughout the United States are temporarily assigned to Nellis AFB, generating a significant demand for temporary quarters. CURRENT SITUATION: Nellis AFB has a severe shortage of transient quarters and is able to accommodate less than half the average nightly demand. Additionally, the demand for rooms exceeds the supply more than 75 percent of the time. The average number of bedspaces required per night is 1058 (officers and enlisted combined) and the on-base capacity is only 498. Personnel who cannot be accommodated on-base are sent to hotels and motels in the Las Vegas area. Personnel assigned to these off-base accommodations require transportation to the base and typically spend an average of one hour daily commuting back and forth from the hotel to the flightline/exercise area. Flag exercises are held an average of five times per year and run for six weeks, generating approximately half the

VISITING QUARTERS		RKMF953008
<p>total transient population at Nellis AFB. The number of personnel participating in these exercises often brings the nightly demand for bedspaces up to 2,000, resulting in a need to house up to 1,500 persons off base. While this project will not provide a facility capable of housing all exercise personnel during these peak periods, the numbers of key and essential personnel sent off base will be considerably reduced. Currently, Nellis AFB annually contracts for over 218,000 bed-nights in the Las Vegas area at a cost of approximately \$4.2 million per year, not including increased costs for transportation and food allowance. At the completion of this project, the annual requirement for off-base accommodations will be reduced to 71,000 bed-nights, a net reduction of 67 percent.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Large numbers of exercise participants will continue to be housed off-base at increased costs. The Air Force will continue to pay lodging and per diem to the personnel housed off-base, resulting in a much higher annual cost than on-base accommodations.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of MIL-HNBK 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of new construction, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, "Fire Protection for Facilities". Cost for fire protection systems is shown separately since this new standard is not yet reflected in OSD approved unit cost factors for dormitories.</p>

10. Description of Proposed Construction: Two-story facility with concrete foundation, masonry walls, structural steel frame, sloping roof system, fire protection system, utilities, elevator, demolition, asbestos removal/disposal, site improvements, and necessary support. Air Conditioning: 85 Tons.						
11. REQUIREMENT: As required. PROJECT: Construct a KC-10 Squadron Operations/Aircraft Maintenance Unit (Sq Ops/AMU) facility. (New Mission) REQUIREMENT: This project is required to comply with Air Force guidance to build Objective Wing squadrons by combining aircraft operators with flightline maintainers. The consolidation relocates flyers and maintainers out of undersized and dispersed facilities into a functional and adequately sized structure to support the addition of 10 KC-10s expected in the 4th quarter of FY94. A total of 24 KC-10s will be in place by the 4th quarter of FY95. Space is required for Ops/AMU management support, briefing/debriefing, flight planning, training and testing, standardization/evaluation, locker rooms, life support, flying/ground safety, tool rooms, bench stock, mobility office, scheduling, and a technical order library. In addition, an elevator is required to comply with the Americans With Disabilities Act of 1990. This consolidation is consistent with the Air Mobility Command (AMC) initiative to bring the Sq Ops/AMU facilities up to minimum Air Force standards. These efficiencies are essential to maintain mission tasking rates in AMC. CURRENT SITUATION: There are no adequate facilities to support consolidated Sq Ops/AMU operations in support of wide framed aircraft at McGuire AFB. Currently there are eight operations and maintenance facilities in use. These facilities provide only half of the required

MCGUIRE AIR FORCE BASE, NEW JERSEY		
4. PROJECT TITLE	5. PROJECT NUMBER	
KC-10 SQUADRON OPERATIONS/ AIRCRAFT MAINTENANCE UNIT FAC	PTFL953012	
<p>space to support the much larger unified KC-10 operations and maintenance functions. The operations' facilities are also overcrowded, improperly configured, and physically separated from the squadron maintenance personnel on the flightline. This creates fragmented lines of communications/authority. Aircrews and maintainers spend many hours away from duty location in an effort to obtain parts, organizational and mobility equipment, and required training. Other inefficiencies include lack of space for mission planning and briefings, inadequate space for storage and equipment storage, and inadequate electrical and mechanical systems. Most of the existing facilities will be reused to meet other mission requirements.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Operations, maintenance, and support personnel will remain in separated buildings and will never develop the cohesiveness necessary to become an efficient and effective operational organization. The physical separation will continue to hamper the lines of authority and communication throughout the squadron. Essential squadron operations and logistic functions will continue to require additional work-arounds that will degrade mission performance.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, addition/alteration, and new construction) was done. It indicates new construction is the only option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Construct a fire training facility to include, a 100 foot diameter environmentally approved fire training area with a large frame aircraft simulator, 1,000 gallon water capacity LPG tank, a fuel water separator, a lined effluent holding pond, pumps, piping system, and necessary support.					
11. REQUIREMENT: 1 EA ADEQUATE: 0 SUBSTANDARD: 1 EA <u>PROJECT:</u> Construct a fire training facility. (Current Mission) <u>REQUIREMENT:</u> This is a Level I environmental compliance project. The existing fire training pit does not meet the Clean Water Act (CWA) requirements (40 CFR 122.26). This project constructs a fire training facility which meets CWA, Clean Air Act, and the Resource Conservation and Recovery Act requirements. The following features must be provided; impermeable liner below the burn area, fuel/water separator and nondischarging effluent holding pond to prevent contamination of soil and groundwater. Live fire training is an FAA established quarterly training requirement for the fire fighters to maintain a high level of proficiency. It is Air Force policy to have a facility on every major Air Force installation to meet fire training requirements which complies with all applicable environmental requirements. <u>CURRENT SITUATION:</u> The existing live fire training facility does not meet the CWA requirements and has been closed since Oct 1982. Live fire training requirements defined by Air Force regulations are not being met. An undersized aircraft mock-up structure with no fire or heat capability is used to provide minimal training. There are no environmentally approved live fire training facilities in the local area. Structural fire training is provided only when facilities are burned for purposes of demolition.

AIR FORCE		
3. INSTALLATION AND LOCATION		
MCGUIRE AIR FORCE BASE, NEW JERSEY		
4. PROJECT TITLE	5. PROJECT NUMBER	
FIRE TRAINING FACILITY	PTFL963501	
<p><u>IMPACT IF NOT PROVIDED:</u> Fire fighters will not be able to meet Air Force and FAA quarterly training requirements for remaining proficient in aircraft crash fire fighting and rescue techniques. The safety of both the fire fighter and aircraft accident victims will continue to be compromised by lack of proper training. Traveling to other installations to conduct fire training exercises is not feasible for the fire fighters because of cost and the level of manning required to remain at the installation to support the mission.</p> <p><u>ADDITIONAL:</u> There are no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

10. Description of Proposed Construction: Construct a one million gallon per day (MGD) wastewater treatment plant to provide advance wastewater treatment and sludge disposal. Sitework will include construction of a wetlands area and other necessary support. Provide construction, operation and discharge permits, operation and maintenance (O&M) manual and one year start-up contract.					
11. REQUIREMENT: As required. <u>PROJECT:</u> Construct a wastewater treatment and disposal plant. (Current Mission) <u>REQUIREMENT:</u> This is a Level I environmental compliance requirement. Existing unlined, unpermitted lagoons do not meet the requirements for either surface impoundments, under the Resource Conservation and Recovery Act (RCRA), or wastewater discharge, under the Clean Water Act (CWA). This construction will bring the base into compliance. <u>CURRENT SITUATION:</u> The existing wastewater treatment facilities (lagoons) were built in 1966 and 1967, and provide primary and secondary treatment. The lagoons discharge to an on-base lake that provides storage, evaporation and percolation. A local farmer uses water from this lake for irrigation of non direct human food chain crops. The current system does not have a National Pollution Discharge Elimination System (NPDES) permit, and discharge of untreated industrial process wastewater can cause the existing lagoons to be designated as Solid Waste Management Units (SWMUs) and require their cleanup under RCRA. <u>IMPACT IF NOT PROVIDED:</u> Continued operation of the base's existing unlined lagoons could result in a Notice of Violation (NOV) of federal or state regulations, and in fines and penalties of up to \$25,000 per day per violation. Closure of the lagoons will effectively prevent the use of the

10. Description of Proposed Construction: Upgrade electric distribution systems by replacing 5 KV and 15 KV overhead distribution lines with 15 KV underground lines, and placing street lighting and building service lines underground; upgrade substations, replace switches and sectionalizers; provide fuel containment; upgrade supervisory control and data acquisition (SCADA) system and provide necessary support.					
11. REQUIREMENT: As required. PROJECT: Upgrade eastside electrical distribution system. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A reliable electrical distribution system is required to provide continuous electrical service to various base operations and missions at Kirtland Air Force Base. The existing system must be upgraded to meet National Electric Safety Code standards. Replacing low voltage lines and transformers and the installation of underground distribution lines is needed to improve system reliability and to reduce maintenance costs. The electrical distribution system must be capable of handling electrical harmonics (interference) so that computer and data systems operating within various base facilities are not corrupted. Failing utility poles must be disposed of and oil and fuel-fed generators require containment measures meeting EPA regulations. CURRENT SITUATION: The electrical distribution system is rapidly failing and electrical power requirements exceed capacity to the extent that mission requirements are not being met. Maintenance and repairs to the system consume dwindling base operations and maintenance funds and manpower. Many utility poles and lines are failing and are susceptible to storm and wind damage. Electrical lines must be placed underground for

<p>safety, reliability and for ease of maintenance. Electrical interference (harmonics) travels within buildings, thereby corrupting the collection and transmission of data gathered during special weapon system testing. There are also many oil and fuel-filled generators which do not have the appropriate containment measures required by the EPA.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The continued deterioration and failure of electric distribution system components will result in additional power outages, brownouts and low voltage situations, which negatively impact mission accomplishment and quality of life for personnel located within this area of the base.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. 10. Description of Proposed Construction: Redirect storm drainage channel by installing culvert, pipe, and outlet structure. Includes necessary support.						
11. REQUIREMENT: As required. PROJECT: Upgrade storm drainage system. (Current Mission) REQUIREMENT: This is a Level I environmental compliance requirement. This project is required to comply with Clean Water Act requirements under 40 CFR 122.26 for storm water discharge. Kirtland Air Force Base is required to meet Section 2-201 of the New Mexico Water Quality Control Commission (WQCC) regulations, which do not allow disposal of refuse in a natural water course. A redirected storm drainage channel is required to preclude runoff through an existing closed landfill located in the Tijeros Arroyo. Rerouting the channel will prevent contamination of the water table and storm waters which flow through a closed landfill. A new culvert is needed to divert storm water around the landfill and minimize erosion and subsequent contamination of the Tijeros Arroyo below the landfill as recommended by the WQCC. CURRENT SITUATION: The base is in violation of Section 2-201 of the WQCC Regulation and received a Notice of Violation (NOV) on 4 Sep 90 for a similar uncontrolled discharge and for allowing refuse to enter Tijeros Arroyo. This landfill is located in the Arroyo and contains hazardous materials. A drainage channel from the base industrial area and runway empties into the Arroyo above the landfill. During heavy rains, storm waters uncover hazardous materials and wash them off base. The cap of the landfill has been breeched and storm waters leach through the landfill, possibly contaminating the water table. IMPACT IF NOT PROVIDED: Hazardous materials and debris will continue to

10. Description of Proposed Construction: Materials and labor to construct a 44,000 SF steel frame structure with concrete masonry walls, reinforced concrete flooring, and standing seam metal roof. Includes fire suppression systems, and other necessary support. Construct a 4,200 SF facility of similar construction materials to relocate an existing Audiovisual Services Center. Demolish two existing facilities. Air Conditioning: 120 Tons.					
11. REQUIREMENT: 86,000 SF ADEQUATE: 36,000 SF SUBSTANDARD: 0 PROJECT: Construct a consolidated C-130 squadron operations, aircraft maintenance unit (AMU), and an audiovisual services center. (New Mission) REQUIREMENT: This project is required to support the beddown of an additional C-130 squadron at Pope AFB. An adequate facility is required to plan, brief, and critique combat crews, direct flight operations, perform aircraft maintenance functions, and provide space for aircrew life support equipment storage, inspection, and servicing. A new audiovisual services center facility is also required. The existing substandard audiovisual center and a substandard AMU facility will be demolished as part of this requirement to provide a suitable site on the flightline for the new squadron operations facility. The C-130 AMU function will be housed in interim facilities during construction of the new facility. CURRENT SITUATION: There are no adequate facilities or sites available to house the new squadron operations/aircraft maintenance unit requirement. All existing facilities which can support this requirement are currently being used to full capacity for newly formed F-16, A-10, and C-130 composite wing squadrons. The only logical site which can support this requirement is currently the site for two inadequate facilities, one of which houses an aircraft maintenance unit, and the other an audiovisual

<p>services center. This C-130 squadron was initially supposed to relocate to another installation and was using temporary facilities until the relocation was implemented. In 1993, the DoD force structure realignment action authorized the C-130 squadron to remain assigned to Pope AFB. This action created a facility shortage at Pope AFB and the squadron does not have adequate space to fully support operations, maintenance, and life support functions. Facilities under temporary use by the squadron must be returned to their original use by composite wing functions.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The squadron will remain scattered in temporary facilities and will be unable to conduct operations efficiently due to the lack of adequate space. This unacceptable arrangement will also not be conducive to the functional operation and organizational concept of the unit and will prevent the squadron from conducting operations, maintenance, and life support functions in a manner required for wartime missions.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, renovation, upgrade, new construction, leasing) was done. Because it indicates new construction is the only option that will meet operational requirements, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Excavate/remove 29 underground storage tanks (USTs). Dispose of tank residue and test soil at each site. Remediate contaminated soil. Install 18 above ground storage tanks (ASTs), with all associated mechanical equipment to meet Federal and State compliance standards.						
11. REQUIREMENT: As required. PROJECT: Remove and replace underground fuel storage tanks. (Current Mission) REQUIREMENT: This is a Level II environmental compliance requirement. Upgrade all underground storage tanks (USTs) regulated by 40 CFR 280 to new standards by Dec 1998. The Environmental Protection Agency (EPA) has set standards that require all regulated underground storage tanks to have leak detection, corrosion protection, and spill/overfill prevention systems. CURRENT SITUATION: Underground storage tanks at Pope AFB do not meet federal law (40 CFR 280.21) and state requirements for cathodic protection, leak detection monitoring and overfill/spill protection. These deficiencies must be corrected to prevent violation of federal UST regulations. IMPACT IF NOT PROVIDED: Failure to replace these tanks will result in an unacceptable risk of pollution. Additionally, Pope AFB will not be in compliance with federal and state environmental requirements thereby subjecting the base to enforcement action and monetary penalties. If project is not accomplished by the established deadline, the base will be in violation of the law subject to receiving Notices of Violation, fines and significant adverse publicity. ADDITIONAL: There is no criteria/scope for this project in Part II of

10. Description of Proposed Construction: Two-story facility with concrete foundation, masonry walls with exterior brick veneer, sloped roof system, fire protection system, utilities, elevator, demolition, site improvements, and all necessary support. Air Conditioning: 80 Tons.					
11. REQUIREMENT: As required. PROJECT: Construct a KC-135 Squadron Operations/Aircraft Maintenance Unit (Sq Ops/AMU) facility. (New Mission) REQUIREMENT: This project is required to comply with Air Force guidance to build Objective Wing squadrons by combining aircraft operators with flightline maintainers. The consolidation relocates flyers and maintainers out of undersized and dispersed facilities into a functional and adequately sized structure to support the beddown of 26 additional KC-135s in the 3rd quarter of FY94. A total of 48 KC-135s will be in place by the 4th quarter of FY95. Space is required for Ops/AMU management support, briefing/debriefing, flight planning, training and testing, flying/ground safety, tool rooms, bench stock, mobility office, life support, technical order library, scheduling, standardization/evaluation, and locker rooms. In addition, an elevator is required to comply with the Americans With Disabilities Act of 1990. This consolidation is consistent with the Air Mobility Command (AMC) initiative to bring the Sq Ops/AMU facilities up to minimum Air Force standards. These efficiencies are essential to maintain mission tasking rates in AMC. CURRENT SITUATION: There are no adequate facilities to support KC-135 consolidated Sq Ops/AMU operations at Grand Forks AFB. Existing Sq Ops/AMU operations are conducted in five facilities which are substandard, inadequately sized, and not properly configured to accommodate

<p>consolidated operations. They are widely scattered creating fragmented lines of communications/authority. Aircrews and aircraft maintainers spend many hours away from their duty location in an effort to obtain parts, organizational and mobility equipment, and required training. One facility totalling 2,900 square feet will be demolished as a result of this project. The remaining four existing facilities will be reused as interim facilities for other requirements.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Operations, maintenance, and support personnel will remain in separated substandard buildings and will never develop the cohesiveness necessary to become an efficient and effective operational organization. Essential squadron operations and logistic functions will continue to require additional work-arounds that will degrade mission performance. The physical separation will continue to hamper the lines of authority and communications throughout the squadron.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of the Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, addition/alteration, and new construction) was done. It indicates new construction is the only option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: A three-story structure with reinforced concrete foundation and floor slabs, structural frame, masonry walls, sloped metal roof, fire protection, and site improvements. Includes room-bath-room modules, laundries, storage and lounge areas, and necessary support. Air Conditioning: 120 Tons. Grade Mix: 180 E1-E4.					
11. REQUIREMENT: As required. <u>PROJECT</u> : Construct a dormitory. (Current Mission) <u>REQUIREMENT</u> : This is a Level I Commander's Facility Assessment project. It is a major Air Force objective to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 180 personnel: 180 E1-E4, with a maximum utilization of 180 personnel. <u>CURRENT SITUATION</u> : There are currently not enough adequate dormitories to meet the billeting requirements for unaccompanied enlisted personnel at this installation. There are over 320 enlisted personnel living off base due to lack of on-base quarters. This project will significantly reduce the base dormitory deficiency. <u>IMPACT IF NOT PROVIDED</u> : Substandard living conditions will persist and morale, productivity, and career satisfaction for the enlisted force will continue to be degraded. Unaccompanied enlisted personnel will also have to continue living off-base resulting in a payment of \$873,000 of BAQ/VHA/BAS allowances annually. <u>ADDITIONAL</u> : This project meets the criteria/scope specified in the new

<p>uniform barracks standard established by OSD. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, sending enlisted personnel off base, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection for Facilities. Cost for fire protection is shown separately since this new standard is not yet reflected in OSD-approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Remove 11 underground storage tanks (USTs). Dispose of tank, sludge, and test soil at each site. Remediate contaminated soil. Install 10 new double-walled underground tanks & upgrade 5 existing tanks with double-wall piping, interstitial leak detectors, cathodic protection and spill/overfill protection.					
11. REQUIREMENT: As required. PROJECT: Remove, replace and upgrade underground fuel storage tanks (USTs). (Current Mission) REQUIREMENT: This is a Level II environmental compliance requirement. Upgrade all USTs regulated by 40 CFR 280 to new standards by Dec 1998. The Environmental Protection Agency (EPA) has set standards that require all regulated USTs to have leak detection, corrosion protection, and spill/overfill prevention systems. Adequate fuel storage, properly designed and located, is required to comply with wing mission requirements. All petroleum dispensing and operating facilities must be provided with a positive means for preventing release of pollutants into the surrounding environment. CURRENT SITUATION: USTs at Minot AFB facilities do not meet federal law (40 CFR 280) and state requirements for leak detection, cathodic protection, and spill/overfill protection. These deficiencies must be corrected by December 1998 to prevent violation of federal UST regulations. IMPACT IF NOT PROVIDED: Failure to replace these tanks at Minot AFB will result in an unacceptable risk of pollution. Additionally, Minot AFB will fail to be in compliance with federal and state environmental requirements, thereby subjecting the base to enforcement actions and monetary penalties. If this project is not accomplished by the

10. Description of Proposed Construction: Replace 6.9KV transformers at two substations with 12KV transformers and stepdown transformers at various facilities. Includes replacement of switches, relays, ancillary items and partial replacement of distribution lines.					
11. REQUIREMENT: As required. PROJECT: Upgrade an electrical distribution system. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A reliable electrical distribution system is required to provide continuous electric service to various mission essential facilities, most of which support research and development activities. The existing system must be upgraded to meet current electrical codes, improve system reliability and efficiency, and to replace obsolete equipment which is no longer in production. CURRENT SITUATION: Most of the base electrical distribution has been converted to 12KV system consisting of efficient and reliable components. However, some of the facilities are still served by a forty-year-old system which operates at 6.9KV, which is inefficient and unreliable. Replacement transformers are not commercially available and must be custom manufactured at a premium price. A recent transformer failure resulted in a laboratory being without power for three days before a connection to a 12KV line could be completed. Another leaking but operational transformer was used for a year before a replacement could be obtained and installed. IMPACT IF NOT PROVIDED: Transformer failures will lead to longer power outages for facilities such as system program offices and laboratories. This will result long delays in laboratories activities and increased operation and maintenance cost. ADDITIONAL: There is no criteria/scope for this project in Part II of

10. Description of Proposed Construction: Construct a fire training facility to include: a lined and environmentally acceptable fire training pit; aircraft mockup; tank for propane gas; pumps, piping, and storage system for fuel and water; lighting; fencing; roads; and necessary support.						
11. REQUIREMENT: 1 EA ADEQUATE: 0 SUBSTANDARD: 1 EA PROJECT: Construct a fire training facility. (Current Mission) REQUIREMENT: This is a level I environmental compliance requirement. The existing fire training pit does not meet the Clean Water Act (CWA) requirements (40 CFR 122). Construct a fire training facility which meets CWA, Clean Air Act and Resource Conservation and Recovery Act requirements as applicable. Provide an impermeable liner below the burn area, and a holding pond to prevent contamination of soil and groundwater. Live fire training is an established Federal Aviation Administration (FAA) quarterly training requirement for fire fighters to maintain a high level of proficiency. It is Air Force policy to have a facility on every major Air Force installation to meet fire training requirements which complies with all applicable criteria and environmental requirements. CURRENT SITUATION: The existing facility does not meet the CWA requirements and has been closed since April 1990; thus, live fire training cannot currently be conducted. Presently, minimal training is conducted using a mock-up structure with no fire or heat capability. However, this training does not fulfill Air Force or FAA requirements. There are no environmentally approved live fire training facilities in the local area. The existing site is currently designated as an Installation Restoration Program site and is undergoing remedial investigation funded by Defense Environmental Restoration Account.

FIRE TRAINING FACILITY		AGGN953002
<p><u>IMPACT IF NOT PROVIDED:</u> Fire fighters will not be able to meet Air Force and FAA quarterly training requirements for remaining proficient in aircraft crash fire fighting and rescue techniques. The safety of both the firefighters and aircraft accident victims will continue to be compromised by lack of proper training. Traveling to other installations to conduct the fire training exercises is not feasible for the fire fighters because of cost and the level of manning required to remain at the installation to support the mission.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

10. Description of Proposed Construction: Alter interior partitioning to provide room-bath-room modules, exterior entrances and balconies; extend roofline and upgrade exterior; install cable TV system; upgrade laundry rooms, HVAC and utility systems, remove asbestos and provide necessary support. Air Conditioning: 150 Tons. Grade Mix: 140 E1-E4.					
11. REQUIREMENT: As required. PROJECT: Add to and alter two dormitories. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs which these people must perform. Estimated intended utilization is 140 personnel: 140 E1-E4, with a maximum utilization of 140 personnel. CURRENT SITUATION: The buildings were constructed in 1960 when functional criteria and standards of construction for bachelor quarters were considerably lower. Common latrines, inadequate lighting, poor insulation and sound attenuation, obsolete electrical and mechanical systems, and lack of privacy are major deficiencies of these facilities. IMPACT IF NOT PROVIDED: Substandard living conditions will continue to degrade the morale, productivity and career satisfaction of enlisted personnel assigned to this base. ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. An economic analysis has been prepared comparing the alternatives of new construction,

<p>revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, revitalization was found to be the most cost efficient over the life of the project. Fire protection systems for this project meet new standards established in Military Handbook 1008-B, "Fire Protection for Facilities", dated 15 January 1994. Cost for fire protection is shown separately since this new standard is not yet reflected in OSD approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Two-story facility with concrete foundation, masonry walls with exterior brick veneer, sloped roof system, fire protection system, utilities, elevator, demolition, asbestos removal/disposal, site improvements, and necessary support. Air Conditioning: 65 Tons.					
11. REQUIREMENT: As required. <u>PROJECT:</u> Construct a C-17 Squadron Operations/Aircraft Maintenance Unit (Sq Ops/AMU) facility. (New Mission) <u>REQUIREMENT:</u> This project is required to comply with Air Force guidance to build Objective Wing squadrons by combining aircraft operators with flightline maintainers. The consolidation relocates flyers and maintainers out of undersized and dispersed facilities into a functional and adequately sized structure to support the beddown of the C-17 aircraft. The first C-17s arrived in 1993 and will total 40 by September 1998. Space is required for Ops/AMU management support, briefing/debriefing, flight planning, training and testing, flying/ground safety, tool rooms, bench stock, standardization/evaluation, locker rooms, mobility office, scheduling, and a technical order library. In addition, an elevator is required to comply with the Americans With Disabilities Act of 1990. This consolidation is consistent with the Air Mobility Command initiative to bring the command's Sq Ops/AMU facilities up to minimum Air Force standards. These efficiencies are essential to maintain mission tasking rates in the Air Mobility Command. <u>CURRENT SITUATION:</u> The existing squadron operations and aircraft maintenance facilities were designed to support C-141 aircraft. They are undersized and not configured to support the much larger unified squadrons supporting the new and larger C-17 aircraft. The squadron operations and

<p>maintenance personnel operate out of two small separated buildings. The physical separation creates fragmented lines of communications/authority. They are overcrowded and inadequately configured. Inefficiencies include lack of space for planning, briefing, administration, storage and issue of parts, flying clothing and equipment. Upon completion of this project, one substandard facility totalling 8,900 SF will be demolished. Interim relocatable facilities have been purchased to support the new C-17 squadron operations/AMU facility requirements until this project is completed.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Operations, maintenance, and support personnel will remain in separated, undersized, and interim facilities and will never develop the cohesiveness necessary to become an efficient and effective operational organization. The physical separation will continue to hamper the lines of authority and communications throughout the squadron. Essential squadron operations and logistic functions will continue to require additional work-arounds that will degrade mission performance. Full implementation of the more effective Objective Wing squadron and adequate beddown of the C-17s will be degraded.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, addition/alteration, and new construction) was done. It indicates new construction is the only option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Demolition of existing exterior wall, construction of two-story addition to existing simulator facility with high bay area, sloped roof, concrete foundation and floor slab, exterior masonry walls with brick veneer to match existing facility, and necessary support. Air Conditioning: 25 Tons.					
11. REQUIREMENT: 22,879 SF ADEQUATE: 18,179 SF SUBSTANDARD: 0 PROJECT: Add to a C-17 flight simulator facility. (New Mission) REQUIREMENT: An addition to the existing C-17 flight simulator facility is required to house the last of three C-17 flight simulators to be delivered to Charleston AFB. This simulator will provide initial training, proficiency, and effective mission procedures training. It is essential for providing hazardous emergency training procedures that cannot otherwise be provided. Required areas include a simulator bay, computer room, briefing room, and an associated hydraulic area. Facility construction is required in FY96 to support simulator equipment delivery date in Sep 1997. CURRENT SITUATION: This project is the second phase of a two-phase program to construct a flight simulator addition for the beddown of the C-17 aircraft at this installation. The first phase which provided two bays was approved in the FY89 MILCON program to support initial delivery of the new aircraft. This addition will provide the final bay needed to support C-17 aircrew training requirements associated with the acquisition of 40 C-17 aircraft. The first C-17s arrived in 1993 and will total 40 by September 1998. IMPACT IF NOT PROVIDED: A complete beddown of the C-17 aircraft cannot be accomplished without providing required flight simulator facilities for

10. Description of Proposed Construction: Three-story structure with reinforced concrete foundation and floor slabs, masonry walls, and roof. Includes room-bath-room modules, laundry areas, storage, chiller plant, lounge areas, and all necessary support. Air Conditioning: 100 Tons. Grade Mix: 136 E1-E4.					
11. REQUIREMENT: As required. PROJECT: Construct a dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment project. It is a major Air Force objective to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 136 personnel: 136 E1-E4, with a maximum utilization of 136 personnel. CURRENT SITUATION: There are currently not enough adequate dormitories to accommodate the unaccompanied enlisted personnel at this base. Existing dorms are fully occupied. There are currently in excess of 240 E-1 through E-4 enlisted personnel living off-base due to lack of adequate on-base quarters. Requested construction will greatly reduce this existing deficit. IMPACT IF NOT PROVIDED: Unaccompanied enlisted personnel will have to continue living off-base resulting in a \$1.9 million payment of BAQ/VHA/BAS allowances annually. ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. An economic analysis has been prepared comparing alternatives of new construction and status quo

10. Description of Proposed Construction: Provide improvement of storm water quality by elimination of cross-connections (sanitary to storm sewer connections, process/nonprocess waters entering the storm drainage system), elimination of storm water runoff from potential contaminant areas, and construction of berming/containment at potential spill/leak areas to prevent these contaminants from entering the storm drain.					
11. REQUIREMENT: As required. PROJECT: Upgrade storm drainage system. (Current Mission) REQUIREMENT: This is a Level II environmental compliance requirement. This project is necessary to satisfy the Clean Water Act requirement under 40 CFR 122.26 for storm water discharge. The Storm Water National Pollution Discharge Elimination System (NPDES) Permit was issued in 1994. As part of the permit, the base is required to be in compliance with their Storm Water Pollution Prevention Plan by 1997. Shaw AFB will be required to certify that non-storm water discharges are not connected to the storm drainage system. Corrective actions are necessary to eliminate these non-storm water discharges. CURRENT SITUATION: Shaw AFB does not provide storm water runoff control measures from the industrial areas of the base, as required by the NPDES permit. There are industrial buildings where floor drains are connected to the storm drainage system, and areas with oil-water separators connected to the storm drainage system. The lack of containment and berming allow drainage from potential spill sites in heavy industrial areas to discharge into various waterways and watersheds. These existing non-storm water discharges into the storm drainage system are not allowed by the NPDES permit. Control of storm water runoff is essential to prevent contamination of Long Branch Creek, Mush Branch Creek and the

<p>Pocotaligo River. Control measures proposed for this plan are in accordance with the base's Storm Water Pollution Prevention Plan.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Shaw AFB will continue to risk contaminating its storm water runoff, thereby subjecting the base to enforcement action, monetary penalties and significant adverse publicity. If the project is not accomplished by the established deadline, the base will be in violation of the law and subject to receiving Notices of Violation (NOVs) and fines up to \$25,000 per day per violation.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

10. Description of Proposed Construction: Convert the engine test facilities, plant B, refrigeration systems from R-12 to R-134a refrigerant; retrofit systems to retain desired operational capability; provide refrigerant storage, valves, transfer piping, asbestos removal and necessary support.					
11. REQUIREMENT: As required. PROJECT: Upgrade engine test facilities refrigeration system, plant B. (Current Mission) REQUIREMENT: This is a level II environmental compliance requirement. This project is required to prevent continued release of unacceptable levels of R-12 refrigerant, an ozone depleting chemical (ODC) into the atmosphere. It also eliminates the risk of mission shut-down of nationally critical aircraft and missile turbine engine test facilities due to non-availability or excessive replenishment costs of R-12 refrigerant. These facilities provide a unique test capability critical for aircraft development and production (F-22, B-2, C-17.) and for retrofit of current aircraft such as the F-15 and F-16. Ground testing at extremely cold and hot temperatures (-24 to 650 degrees F) is required to simulate high altitude flight conditions critical to engine design and production decisions. CURRENT SITUATION: The existing system has been maintained over time, but major component repair, upgrade, reconfiguration, and refrigerant conversion is now required to preclude continued release of ODC. Refrigeration plants which provide refrigerated air to 17 engine test cells at the Arnold Air Force Base leaked 90,000 pounds (24% of plant capacity) of ozone depleting refrigerant (R-12) into the atmosphere last year. An emergency \$1 million repair project using base operations and

4. PROJECT TITLE		5. PROJECT NUMBER
UPGRADE ENGINE TEST FACILITIES REFRIGERATION SYSTEM, PLANT B		ANZY900286
<p>maintenance funds was executed to stop this loss. Production of R-12 is ending by international agreement and executive order in December 1995. Without R-12, the current refrigeration system cannot operate, preventing cold flight conditions in the engine test facilities. Conversion to R-134a, a non-ozone depleting refrigerant, will allow continued plant operation. Since mission test requirements preclude closure of all test facilities simultaneously, emergency funding of the first refrigeration plant, which services 13 engine test cells, was funded as an emergency construction project in the FY94. The remaining two plants must be funded before the R-12 refrigerant supply/stockpile is exhausted. This project will convert the refrigerant system in plant B. Plant C will be converted in the FY97 program. Phasing is required to avoid degradation of mission capability if simultaneous shut-down of all engine test cells were to occur. With the projected closure of the Naval Air Warfare Center, Aircraft Division at Trenton, New Jersey, all DoD ground testing of aircraft and missile propulsion systems over the full range of flight conditions must be conducted at Arnold AFB.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The United States will lose all national capability to ground test propulsion systems at simulated flight conditions. This will result in major delays and cost increases for the development and testing of F-18 and F-22 aircraft, cruise missile propulsion systems, and improvements to existing propulsion systems.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide" or in Air Force Manual 86-2, "Standard Facility Requirements". All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Install automatic fire detection, alarm, and suppression systems in 43 buildings and extend water mains to form a looped system. Includes asbestos removal and necessary support.					
11. REQUIREMENT: As required.					
PROJECT: Upgrade fire protection systems. (Current Mission)					
REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. Correction of fire deficiencies, including installation of fire detection and suppression systems, is required to provide protection for up to 2,100 occupants and government assets in 43 buildings, and to minimize damage to these mission essential facilities in the event of fire. A looped water system is needed to provide adequate water flow and maintain the reliability of the water system by permitting back feed in the event of a water line break.					
CURRENT SITUATION: Fire detection, alarm, and suppression systems are inoperable, unreliable or nonexistent at many locations. This situation requires building occupants to detect fires and summon the fire department. When a facility is unoccupied, fires could cause extensive damage to base assets before being detected. Replacement costs for these 43 buildings and their contents is approximately \$800 million. The water supply system is a single-feed, branch system. A break in the main line can disable the entire water system and result in a complete loss of water for fire protection in the affected areas.					
IMPACT IF NOT PROVIDED: The possibility of rapid spread of fire will continue, placing personnel and valuable assets at risk, and possibly cause the extended interruption of various systems testing.					
ADDITIONAL: There is no criteria/scope for this project in Part II of

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab with masonry walls, structural steel frame and metal roof system. Includes an elevator, utilities, parking, and all necessary support. Demolish two sub-standard facilities (23,588 SF). Air Conditioning: 40 Tons.						
11. REQUIREMENT: 65,300 SF ADEQUATE: 25,300 SF SUBSTANDARD: 64,318 SF PROJECT: Construct a Wing Headquarters facility. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. An adequate and functional facility is required to support reorganization and consolidation activities of Air Intelligence Agency (AIA). As part of the re-organization, geographically separated functions in the Pacific and European Theaters were downsized, functions eliminated and redistributed, and have been redesignated Intelligence Groups. Wing functional responsibilities have been centralized and consolidated with existing intelligence activities at Kelly Air Force Base. Composite functions include the wing operations, engineering, logistics maintenance, plans and programs, wing information systems, contracting, and security. A sensitive compartmented information facility (SCIF) is required to support processing and transmission of classified information. In addition, an elevator is required to comply with the Americans with Disabilities Act of 1990. CURRENT SITUATION: Wing facility requirements are continuing to grow as field offices arrive at the installation. All personnel are scheduled to be on-station by the end of FY96. The Wing is currently housed in interim substandard facilities that are inadequate to support intelligence operations. Once this project is completed other agencies will be relocated to the Wing's present facility. Upon completion of this move

<p>two old wood frame facilities, occupied by these functions, will be demolished.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The Wing and associated mission functions will continue to remain in inadequate facilities that prevent efficient operations and compromise security. Headquarters functions will remain dispersed in facilities that are not configured and conducive to Wing organizational requirements. SCIF space will not be available to support classified network systems for preparing, reviewing, and processing classified messages and to transmit classified information to AIA units.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this facility in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". An economic analysis has been prepared comparing the alternatives of status quo plus addition, new construction, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project.</p>

10. Description of Proposed Construction: Construct a fire training facility to include: a lined and environmentally acceptable fire training pit; aircraft mockup; tank for propane gas; pumps, piping, and storage system for fuel and water; lighting; fencing; roads; and necessary support.					
11. REQUIREMENT: 1 EA ADEQUATE: 0 SUBSTANDARD: 1 EA <u>PROJECT:</u> Construct a fire training facility. (Current Mission) <u>REQUIREMENT:</u> This is a level I environmental compliance requirement. The existing fire training pit does not meet the Clean Water Act (CWA) requirements (40 CFR 122). Construct a fire training facility which meets CWA, Clean Air Act and Resource Conservation and Recovery Act requirements as applicable. Provide an impermeable liner below the burn area, and a holding pond to prevent contamination of soil and groundwater. Live fire training is an established Federal Aviation Administration (FAA) quarterly training requirement for fire fighters to maintain a high level of proficiency. It is Air Force policy to have a facility on every major Air Force installation to meet fire training requirements which complies with all applicable criteria and environmental requirements. <u>CURRENT SITUATION:</u> The existing facility does not meet the CWA requirements and has been closed since November 1993; thus, live fire training cannot currently be conducted. Presently, minimal training is conducted using mock-up structures with no fire or heat capability. However, this training does not fulfill Air Force or FAA requirements. There are no environmentally approved live fire training facilities in the local area. The existing site is currently designated as an Installation Restoration Program site and is undergoing remedial investigation funded by Defense Environmental Restoration Account.

AIR FORCE		
3. INSTALLATION AND LOCATION		
LAUGHLIN AIR FORCE BASE, TEXAS		
4. PROJECT TITLE		5. PROJECT NUMBER
FIRE TRAINING FACILITY		MXDP963001
<p><u>IMPACT IF NOT PROVIDED:</u> Fire fighters will not be able to meet Air Force and FAA quarterly training requirements for remaining proficient in aircraft crash fire fighting and rescue techniques. The safety of both the firefighters and aircraft accident victims will continue to be compromised by lack of proper training. Traveling to other installations to conduct the fire training exercises is not feasible for the fire fighters because of cost and the level of manning required to remain at the installation to support the mission.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

10. Description of Proposed Construction: Upgrade the west airfield lighting system. Work includes upgrade of the runway and overrun lights, cables, threshold lights, distance markers, taxiway lights, visual glideslope indicators, ductbanks and manholes, wind cones, and necessary support.					
11. REQUIREMENT: 79,200 LF ADEQUATE: 39,600 LF SUBSTANDARD: 39,600 LF PROJECT: Upgrade airfield lighting. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. This project is required to properly modify, upgrade and standardize existing airfield lighting systems and visual navigational aids to meet FAA and Air Force standards. This will improve operational safety, reliability, and efficiency of the airfield through the use of equipment, fixtures and materials that can be adequately maintained. This lighting upgrade was identified in the 1988 MAJCOM Master Planning Study of Airfield Lighting Systems and is required for the proper training and safety of inexperienced pilots. CURRENT SITUATION: Instructor pilot students fly 124 sorties per day to comply with the flying syllabus. The majority of the airfield lighting system has been in place since 1951. Piecemeal repair projects have not eliminated major problems. The Major Command lighting study revealed the following major operational problem areas: (1) lighting intensities do not meet FAA or Air Force standards, (2) excessive current losses in cables resulting from advanced stages of insulation deterioration and (3) existing visual approach slope indicator lights do not meet current flight safety requirements. The base has experienced three outages of the west airfield lighting system within the past year. IMPACT IF NOT PROVIDED: Random outages will continue to occur. Airfield

10. Description of Proposed Construction: Construct a fire training facility to include: a lined and environmentally acceptable fire training pit; aircraft mockup; tank for propane gas; pumps, piping, and storage system for fuel and water; lighting; fencing; roads; and necessary support.					
11. REQUIREMENT: 1 EA ADEQUATE: 0 SUBSTANDARD: 1 EA PROJECT: Construct a fire training facility. (Current Mission) REQUIREMENT: This is a level I environmental compliance requirement. The existing fire training pit does not meet the Clean Water Act (CWA) requirements (40 CFR 122). Construct a fire training facility which meets CWA, Clean Air Act and Resource Conservation and Recovery Act requirements as applicable. Provide an impermeable liner below the burn area, and a holding pond to prevent contamination of soil and groundwater. Live fire training is an established Federal Aviation Administration (FAA) quarterly training requirement for fire fighters to maintain a high level of proficiency. It is Air Force policy to have a facility on every major Air Force installation to meet fire training requirements which complies with all applicable criteria and environmental requirements. CURRENT SITUATION: The existing facility does not meet the CWA requirements and has been closed since November 1993; thus, live fire training cannot currently be conducted. Minimal training is conducted using mock-up structures with no fire or heat capability. This training does not fulfill Air Force or FAA requirements. There are no environmentally approved live fire training facilities in the local area that can support this requirement. The existing site is currently designated as an Installation Restoration Program site and is undergoing remedial investigation funded by Defense Environmental Restoration

10. Description of Proposed Construction: Upgrade airfield lighting system. Work includes modernizing airfield lighting vault, replacing light fixtures, handhole covers, distance markers, wind cones, approach supports and flashers, visual glideslope indicator, and necessary support.					
11. REQUIREMENT: 28,900 LF ADEQUATE: 0 SUBSTANDARD: 28,900 LF PROJECT: Upgrade airfield lighting. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. This project is required to properly modify, upgrade and standardize existing airfield lighting systems and visual navigational aids to meet FAA and Air Force standards. This will improve operational safety, reliability, and efficiency of the airfield through the use of equipment, fixtures and materials that can be adequately maintained. This lighting upgrade was identified in the 1988 MAJCOM Planning Study of Airfield Lighting Systems and is required for the proper training and safety of inexperienced student pilots. CURRENT SITUATION: Instructor pilot students fly 300 sorties per day to comply with the strict flying syllabus. A majority of the airfield lighting system has been in place since 1952. Piecemeal repair projects have not eliminated major problems. The lighting study revealed the following major operational problem areas: (1) the 2400 volt exposed conductor system in the lighting vault presents a serious safety hazard, (2) unavailability of parts for antiquated voltage regulators, and (3) lighting intensities do not meet FAA or Air Force standards. The current lease agreement with the City of Wichita Falls, joint users of the airfield, runs through the year 2009 and states the Air Force will maintain the airfield lighting system. IMPACT IF NOT PROVIDED: Airfield will be non-operational during inclement

10. Description of Proposed Construction: Alter three, two-story dormitories. Includes upgrading mechanical and electrical systems, interior finishes, bathroom fixtures, installation of individual storage lockers, converting flat roof to a sloped roof, providing game/lounge rooms, laundry rooms, fire protection, asbestos abatement, site improvements, and necessary support. Air Conditioning: 65 Tons. Grade Mix: 216 E1-E4.					
11. REQUIREMENT: As required. PROJECT: Alter dormitories. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment project. It is a major Air Force objective to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 216 personnel: 216 E1-E4, with a maximum utilization of 216 personnel. CURRENT SITUATION: The facilities to be upgraded were constructed in 1953 and have had no major repairs in over 10 years. These dormitories are substandard when compared to the current living standards. Inadequate lighting and electrical power, substandard mechanical and plumbing systems, and deteriorated interior and exterior finishes are all major inefficiencies of the buildings. IMPACT IF NOT PROVIDED: Substandard living conditions will persist and morale, productivity, and career satisfaction of the enlisted force will continue to be degraded. ADDITIONAL: This project meets the criteria/scope specified in the new

<p>uniform barracks standard established by OSD. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, alteration was found to be the most cost effective over the life of the project. The fire protection system for this project meets new standards established in MIL-HNBK 1008B, Fire Protection for Facilities, published 15 January 94. Cost for fire protection is shown separately since this new standard is not yet reflected in the OSD approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Two-story facility with concrete foundation, masonry walls, structural steel frame, sloping roof system, fire protection system, utilities, elevator, site improvements, and necessary support. Air Conditioning: 65 Tons.					
11. REQUIREMENT: As required. <u>PROJECT:</u> Construct a Squadron Operations/Aircraft Maintenance Unit (Sq Ops/AMU) facility. (Current Mission) <u>REQUIREMENT:</u> This is a Level I Commander's Facility Assessment (CFA) project. It is required to comply with Air Force guidance to build Objective Wing squadrons by combining aircraft operators with flightline maintainers. The consolidation relocates flyers and maintainers out of undersized, interim, and dispersed facilities into a functional and adequately sized structure to support large framed aircraft. Space is required for Ops/AMU management support, briefing/debriefing, flight planning, training and testing, tool rooms, standardization/evaluation, locker rooms, flying/ground safety, bench stock, mobility office, scheduling, and a technical order library. In addition, an elevator is required to comply with the Americans With Disabilities Act of 1990. This consolidation is consistent with the Air Mobility Command initiative to bring the command's Sq Ops/AMU facilities up to minimum Air Force standards. These efficiencies are essential to maintain mission tasking rates in the Air Mobility Command. <u>CURRENT SITUATION:</u> There are no adequate facilities to support wide framed aircraft consolidated Sq Ops/AMU operations at McChord AFB. Currently there are three operations and two maintenance facilities in use. These facilities provide less than half of the required space and

<p>are scattered throughout McChord AFB. The operations personnel of the flying squadron currently operate in an overcrowded, improperly configured facility far from the squadron maintenance personnel on the flightline. The supporting AMU occupies an overcrowded, improperly configured, and temporary modular facility approved for use only until completion of this project. The squadron life support functions are shoehorned in with two other squadron life support elements in a single overcrowded facility at a third location on base. This physical separation creates fragmented lines of communications and authority..</p> <p><u>IMPACT IF NOT PROVIDED:</u> Operations, maintenance, and support personnel will remain in separate, undersized, and interim buildings and will never develop the cohesiveness necessary to become an efficient and effective operational squadron. The geographic separation will continue to hamper the lines of authority and communication throughout the squadron. Essential squadron operations and logistic functions will continue to require additional work-arounds that will degrade mission performance.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, addition/alteration, and new construction) was done. It indicates new construction is the only option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: A three-story structure with reinforced concrete foundation and floor slabs, masonry walls and roof. Includes room-bath-room modules, laundries, storage and lounge areas and all supporting facilities. Demolition of one dormitory and necessary support. Air Conditioning: 65 Tons. Grade Mix: 92 E1-E4.				
11. REQUIREMENT: As required. PROJECT: Construct a dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment project. It is a major Air Force objective to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 92 personnel: 92 E1-E4, with a maximum utilization of 92 personnel. CURRENT SITUATION: There are currently not enough adequate dormitories to meet the billeting requirements of unaccompanied enlisted personnel at this installation. Currently there are in excess of 250 E-1 through E-4 enlisted personnel living off base due to lack of adequate on-base quarters. Adequate off base rentals cost an average of \$550 per month. This project will significantly reduce this existing deficit and reduce the need for \$949,043 payment of BAQ/VHA/BAS annually. Substandard facilities to be replaced do not provide semi-private baths, adequate control of heating and air conditioning, sufficient noise attenuation or necessary amenities to adequately house enlisted personnel. One substandard facility totalling 24,800 square feet will be demolished upon

<p>completion of this project.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Adequate living quarters will continue to be unavailable resulting in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel. Unaccompanied enlisted personnel will have to continue living off-base resulting in an annual payment of \$626,369 of BAQ/VHA/BAS.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, sending personnel off base paying BAQ/VHA, and status quo. Based on the present value and benefits of the respective alternatives, new construction was found to be the most cost effective over the life of the project. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection for Facilities, published 15 January 1994. Cost for fire protection is shown separately since this new standard is not yet reflected in OSD approved unit cost factor for dormitories.</p>

<p>10. Description of Proposed Construction: Alter three, two-story dormitory facilities to provide room-bath-room configuration. Includes electrical, structural, and mechanical modifications; asbestos and lead-based paint removal; fire sprinkler system; site improvements and all other necessary support.</p> <p>Air Conditioning: 150 Tons. Grade Mix: 200 E1-E4.</p>				
<p>11. REQUIREMENT: As required.</p> <p>PROJECT: Alter dormitories. (Current Mission)</p> <p>REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation, and personal well being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 200 personnel: 200 E1-E4, with a maximum utilization of 200 personnel.</p> <p>CURRENT SITUATION: These three historic buildings require upgrading to meet current dormitory standards. They are structurally sound, red brick, two-story (with basement) facilities constructed in 1906 as open bay cavalry barracks. The facilities are listed on the National Register of Historic Places. They were previously converted from open-bay to individual bedrooms with central latrines in 1959, but do not meet current DoD dormitory standards or local building code requirements. Existing central latrine facilities offer residents little or no privacy. Antiquated plumbing, heating and electrical systems have exceeded their life expectancy and require replacement. No fire sprinkler system exists in individual rooms as required by life safety code.</p>

10. Description of Proposed Construction: Remove two coal stokers and generators and replace with gas fired units; replace one gas-fired generator, operating controls and circulating pumps. Replace catwalks, platforms, ladders, and opacity and water flow meters. Includes some interior maintenance. Repair retaining wall outside heat plant. Demolish coal feed and ash handling system, reverse air system, and baghouse.					
11. REQUIREMENT: As required.					
PROJECT: Upgrade central heat plant. (Current Mission)					
REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. Provide space heating and domestic hot water for 112 base buildings (80% of total base building square footage). Dual-fuel capability (natural gas/propane) is required to provide backup in the event of interruption of primary fuel source. Each generator is required to output 55 million BTUs. Temperatures can dip to minus 36 degrees with wind chill to minus 70 degrees, requiring two generators to operate at 70% capacity with the third as backup. Conversion to natural gas is needed to eliminate sulfur oxide emissions, pollution of a nearby tributary from coal fines, and the possibility of violations of the Clean Air Act associated with disposal of fly ash. Permanent catwalks, work platforms, and ladders are required to provide safe access to equipment needing periodic maintenance and repair. Provide operating controls, valves, pumps, generators, convective tube sections, flow meters, and other items of installed equipment are essential to operation of the heating plant.					
CURRENT SITUATION: The central heating plant is the only source of heat for the base buildings served. The three plant generators produce high temperature water at high pressure, and the water is then distributed through insulated mains to base buildings. One generator has been

4. PROJECT TITLE	5. PROJECT NUMBER	
UPGRADE CENTRAL HEAT PLANT	GHLN961002	
<p>converted to natural gas, but the other two are still coal fired and have vibrating stokers. Continuous vibration from the stokers has caused serious cutting and scoring of the convective section tubes. An inspection revealed scoring has penetrated two-thirds of the way through the majority of tubes in each section. Radiant walls are buckling from off-center firing, and circulating pumps are operating at peak capacity but are still inadequate. This is the first installation where these generators and stokers were used together and they are not compatible; the stoker and most parts for it are no longer made. The two coal-fired generators are used only in emergencies to preclude further damage to the tubes. Normal life expectancy of generators should be 25-30 years; however, due to incompatibility of components these units require replacement after only 13 years. In addition, the control systems and access for maintenance are deficient. Instrument air compressor and operating controls are unreliable and unserviceable. Temporary catwalks and wooden platforms are a safety hazard, and there is no access to certain essential equipment. Permanent catwalks, platforms and ladders must be installed to permit safe maintenance and repair of high equipment.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Generators are particularly vulnerable to failure at any time. When two generators fail there will be insufficient capacity to heat base buildings to usable temperatures, and base personnel will be sent home. If all three generators fail there will be no heat for base buildings, pipes will freeze, facilities will be seriously damaged, and repairs to the heat plant and 112 facilities could run into the hundreds of millions of dollars. The primary mission would be severely impacted for weeks while critical repairs were being made. Mission support could be impacted for several months awaiting permanent repairs. Operations and maintenance costs will remain higher if this project is not provided.</p> <p><u>ADDITIONAL:</u> An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, revitalization was found to be the alternative which is most cost efficient over the life of the project. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

10. Description of Proposed Construction: Constructs a pre-engineered metal and masonry building on a concrete foundation with environmental control systems, restrooms, administrative and shop spaces, required utilities, and supporting facilities, including pavements and site improvements. Air Conditioning: 25 Tons.					
11. REQUIREMENT: 13,000 SF ADEQUATE: 0 SUBSTANDARD: 0 PROJECT: Construct a vehicle maintenance facility. (New Mission) REQUIREMENT: A war readiness materiel (WRM) vehicle maintenance shop and management facility are required to support OPPLAN 1002-95 for prepositioning and long-term storage of WRM vehicle assets. These assets must be ready for use by US Central Command (CENTCOM) forces. This facility will support the management and reconstitution of 1,600 vehicles. CURRENT SITUATION: Facilities in the host country are unavailable for adequate WRM storage and maintenance requirements. WRM assets moved into the region during Desert Shield/Storm are exposed to extremely high temperatures, sand, and wind which are causing accelerated deterioration of the vehicles' tires, gaskets, hoses, seats, and paint finish. These vehicles are deteriorating at an estimated rate of 15% per year and must either be reconstituted and stored in country or returned to the CONUS. CONUS storage and roundtrip transportation will exceed storage cost in host country. Four hundred sixty C-141 sorties are required to move these materials one-way from CONUS. This airlift alternative does not meet the readiness requirements or provide operational flexibility for OPPLAN 1002-95 execution. IMPACT IF NOT PROVIDED: The 1,600-vehicle fleet, valued at \$42 million, will continue to deteriorate at a cost of \$6 million per year and no

<p>ADDITIONAL: There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide." However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". This project does not qualify for Host Nation construction funding. A preliminary analysis of reasonable options for accomplishing this project (status quo, new construction) was done. It indicates that new construction is the only option that will meet mission requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: Three-story facility with concrete foundations and floor slabs, masonry walls and roof. Includes room-bath-room modules, lounges, laundry rooms, storage rooms, and all supporting facilities. Demolish existing dormitories. Grade Mix: 90 E1-E4.					
11. REQUIREMENT: As required. PROJECT: Construct a dormitory. (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 90 personnel: 90 E1-E4, with a maximum utilization of 90 personnel. CURRENT SITUATION: There are currently not enough adequate dormitories to accommodate the unaccompanied enlisted personnel at this base. Existing substandard facilities do not provide semi-private baths and adequate noise attenuation to adequately house enlisted personnel. With the increase in manpower from the new wing, the shortfall will be even greater. Local rentals and utilities are so expensive enlisted personnel cannot afford to live off base. Demolish two existing substandard dormitories (42,000 sf). IMPACT IF NOT PROVIDED: Substandard living conditions will persist and morale, productivity, and career satisfaction of the enlisted force will continue to be degraded. ADDITIONAL: This project is not eligible for NATO funding. A

<p>precautionary prefinancing statement will be issued in the event this project becomes eligible in the future. This project meets the criteria/scope specified in the new barracks standard established by OSD. An economic analysis was prepared comparing the alternatives of new construction, alteration, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Fire protection systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection for Facilities. Cost for fire protection is shown separately since this new standard is not reflected in OSD approved unit cost factor for dormitories.</p>

10. Description of Proposed Construction: Reinforced concrete foundation, floor slab, masonry walls, roof system, fire protection, all utilities, and necessary support. Functional areas include reception area, multi-purpose child care rooms, restrooms, storage area, isolation room, office space, laundry room, mechanical room, kitchen, and playground areas.					
11. REQUIREMENT: 118,115 SF ADEQUATE: 13,455 SF SUBSTANDARD: 35,001 SF PROJECT: Construct a child development center (CDC). (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. This facility requirement is in accordance with the Military Child Care Act of 1989. Adequate facilities are essential for providing supervised care and a developmental experience for dependent children aged six weeks to twelve years. This facility will provide for children up to age five--the most critical shortfall at Vogelweh. The facilities must provide a comfortable, clean, educational environment where military service members and DoD civilians can leave their children on an hourly, daily, or drop-in basis without worrying about the level or nature of care. With service members on call for duty continuously, varied shifts and flex-time, it is imperative that they have reliable child care available. CURRENT SITUATION: The existing Child Development Center is adequate to accommodate a maximum of 258 children, and daily attendance at the center averages 250, or 97%. At the present time, 350 children are on the waiting list. This project will result in a facility which will serve a total of 120 children. The Kaiserslautern Military Community (KMC), which includes Ramstein Air Base and the Vogelweh Annex, receives child development services at both locations. The total requirement is based on

4. PROJECT TITLE		5. PROJECT NUMBER	
CHILD DEVELOPMENT CENTER		TYFR953523	
<p>the needs of the entire KMC area. Since the areas are separated geographically and have respective housing areas, CDC services are provided at both locations. Critical deficiencies are being corrected by this project and a companion FY94 MILCON project at Ramstein Air Base. An October 1991 inspection found that two of the three existing child development center facilities at Vogelweh did not meet safety and security standards for child care. The two facilities were built in 1953 and 1957. Both facilities will meet all current standards and requirements after base O&M renovation projects are completed. However, this will not satisfy the requirement for the Vogelweh/Ramstein community. The people on the waiting list currently rely on the local communities for their child care, which may be unlicensed and are generally more expensive. Financial hardship and scheduling difficulties are common, since local care providers' hours may not be consistent with shift or long working hours. The cost of CDC care ranges from \$44 to \$86 per week.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Lack of quality child care contributes to employee absenteeism, low morale and has a negative impact on the military and civilian work forces. Without adequate child care for the dependents of active duty military and DoD civilians, readiness will decline. Parents that have the extra burden of worrying about the care of their children simply will not operate as effectively as those who know their families are well cared for. Families will continue to be forced to use expensive child care programs or place children in unlicensed care in the local communities, or spouses will not be able to work.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide" and DoDI 6060.2, "Child Development Center Programs", published in January 1993. This project is not eligible for NATO funding. This type of facility is not within an established NATO infrastructure category for common funding and will most likely continue to be a user responsibility. However, a precautionary prefinancing statement will be submitted to NATO in the event that the criteria changes for facilities of this type. An economic analysis has been prepared comparing alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost-effective over the life of the project.</p>

10. Description of Proposed Construction: Reinforced concrete foundation and floor slabs, masonry walls and pitched tile roof. Includes room-bath-room modules, laundries, storage and lounge areas and all utilities, HVAC, landscaping and fire protection. Air Conditioning: 85 Tons. Grade Mix: 40 E1-E4.				
11. REQUIREMENT: As required. <u>PROJECT:</u> Construct dormitory. (Current Mission) <u>REQUIREMENT:</u> This is a Level I Commander's Facility Assessment project. It is a major Air Force objective to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. Estimated intended utilization is 40 personnel: 40 E1-E4, with an intended utilization of 40 personnel. <u>CURRENT SITUATION:</u> All personnel assigned to Araxos serve 12 month unaccompanied tours and are not authorized to ship automobiles. The existing dormitories are substandard and accommodate less than half of the base personnel. All of the existing dormitories are failing structurally, and the plumbing systems are no longer maintainable. Enlisted personnel, who do not reside on base, live several miles from the base in inadequate quarters. These personnel are totally dependent on a base bus service for transportation, and very few are able to have telephones in their apartments. This is an unacceptable situation for an installation with 24 hour operations and a short-notice recall mission requirement. Response times are unacceptably long because the bus must visit each member, first, to notify him of the recall and, second, to pick him up and take him to

<p>the base. An additional concern is the terrorist threat to those individuals residing off base.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Response times during contingencies will be unacceptably long, resulting in critical mission impairment. Personnel will continue to reside in unacceptable quarters resulting in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel. Most personnel will continue to be isolated in unsatisfactory quarters off-base.</p> <p><u>ADDITIONAL:</u> This project is not eligible for NATO funding. A precautionary prefinancing statement will be issued in the event this project becomes eligible in the future. This project meets the criteria/scope specified in the new uniform barracks standard established by OSD. A preliminary analysis of reasonable options for accomplishing this project (status quo, leasing, new construction) was done. It indicates new construction is the only option that will meet the requirements. Because of this, a full economic analysis was not performed. Fire Protection Systems for this project meet new standards established in MIL-HNBK 1008B, Fire Protection Facilities, published 15 January 1994. No additional cost for fire protection was included in this project since it is less than three stories with exterior entrances.</p>

10. Description of Proposed Construction: Provide load bearing walls and steel framing; roof; reinforced spread footings, designed to seismic zone 2; brick exterior facing; roll-up doors; slab on grade. Special electrical power requirements, special secure maintenance room; and all utilities, latrines and administration offices. Air Conditioning: 50 Tons.					
11. REQUIREMENT: 8,800 SF ADEQUATE: 0 SUBSTANDARD: 0 PROJECT: Construct a communications maintenance facility. (New Mission) REQUIREMENT: This facility is required to accommodate the move of the 603 Air Control Squadron (ACS) from Sembach AB, Germany, to Aviano AB. The squadron maintains 1500-2000 pieces of communications/electronic equipment per month. Shop space is required for the centralized field repair of ACS CE equipment, including a controlled and secure environment to inspect, maintain and repair C/E equipment. Space is also required for the following activities: computer maintenance, secure communications and radar maintenance, technical and material control, tool and equipment storage, maintenance management administration, restrooms, and a mechanical/electrical equipment room. CURRENT SITUATION: The 603 ACS move to Aviano Air Base from Sembach Air Base, Germany, was completed in July 1994. The ACS requires a TEMPEST secure facility for maintenance of its extensive stock of communications and radar equipment, and it requires administrative and vehicle maintenance space. Relocatable facilities and existing on-base facilities are available to support most of these functions. However, they cannot be used for the maintenance of the communications and radar equipment because they do not meet the security requirements. As a temporary solution, the unit will have to continue to use wartime mobile maintenance vehicles for

<p>the maintenance and tests. Also, the relocatable facility will not have any infrastructure support -- running water, bathrooms, or foundations. <u>IMPACT IF NOT PROVIDED:</u> The ACS will have to continue to operate out of their wartime mobile maintenance units and in inadequate temporary buildings. When the ACS unit is given a mobility tasker supporting contingencies such as Operation Deny Flight, they will not be able to perform their base mission. Additionally, the wear and tear of 24 hours per day and 7 days per week operations on their wartime assets is limiting availability of these assets to support wartime taskers. All assets needed for deployments will be either unavailable or out of commission. <u>ADDITIONAL:</u> All known alternative options were considered during the development of this project. No other option could meet the mission requirements. This project is not eligible for NATO funding. This type of facility is not within an established NATO infrastructure category for common funding and will most likely continue to be a user responsibility. However, a precautionary prefinancing statement will be submitted to NATO in the event that criteria change for these types of facilities. This project does not meet the criteria/scope specified in Part II of MILHNBK 1190, "Facility Planning and Design Guide."</p>

10. Description of Proposed Construction: Drill seven long period (LP) boreholes and encase to a depth of 220 feet. Construct seven 100 SF underground remote operations facilities to house seismic equipment. Provide associated antenna towers to house data transmission equipment. Includes gravel access roads, electrical service and fencing.					
11. REQUIREMENT: 7 EA ADEQUATE: 0 SUBSTANDARD: 7 EA PROJECT: Construct Long Period Seismic Array. (Current Mission) REQUIREMENT: Project provides facilities for the installation of seismic instruments used to transmit continual seismic data transmission using data link. The long period array focuses on seismic events which propagate horizontally. Includes the installation of seven boreholes to house sensitive LP seismic array elements. Each of the new seven array elements will be positioned approximately 20 kilometers from the central recording building located at Belbasi, near Ankara Turkey to form a radial with seven legs. The seismic array is required in direct support of the Air Force Technical Applications Center requirement to monitor provisions of "Safeguard D of the limited Nuclear Test Ban Treaty of 1963" and the upcoming taskings associated with the Comprehensive Test Ban Treaty. Major tasking is verification of subsurface disturbances and to determine if the disturbance was natural or man-made. The Belbasi location remains extremely critical in the performance of this assigned tasking. CURRENT SITUATION: The Belbasi Seismic Research Station was established in the mid-1950's. Cultural encroachment and construction within the existing array has decreased the detection capability of the array by approximately 50%. This reduced data accumulation capability means the loss of critical information. Only one seismometer is available on site since all others have been rendered useless due to encroachment. The city

4. PROJECT TITLE	5. PROJECT NUMBER	
LONG PERIOD SEISMIC ARRAY	ANKR963001	
<p>of Ankara has grown by a factor of four since the original array system became operational and increased congestion and noise levels will only get worse. In fact, additional encroachment has been experienced due to the construction of a new Turkish Military Academy within the adjacent compound area.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Continued encroachment will further degrade seismic operations. Mission shut down will be a "show-stopper" for AFTAC's global network of nuclear monitoring responsibilities. Failure to execute this project will eliminate the seismic data sharing arrangement established with the host nation. Also, it would preclude Turkey from being added to the ranks of the Comprehensive Test Ban Treaty monitoring participants. Finally, it will eliminate a strategic vantage point providing surveillance of neighboring countries which desire to develop or expand nuclear weapons capabilities.</p> <p><u>ADDITIONAL:</u> A preliminary analysis of reasonable options for accomplishing this project was done. It indicates there is only one option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide." However, this project does meet the criteria/scope specified in Air Force Manual 86-2 "Standard Facility Requirements." This project is not eligible for NATO funding.</p>

10. Description of Proposed Construction: Drill six new short period (SP) boreholes and encase. Drill one new broadband borehole and encase. Construct seven 100 SF underground remote operations facilities to house seismic equipment and a 100 SF central communications facility. Provide associated communications towers. Includes required access roads, electrical service and fencing.					
11. REQUIREMENT: 7 EA ADEQUATE: 0 SUBSTANDARD: 7 EA <u>PROJECT:</u> Construct Short Period Array. (Current Mission) <u>REQUIREMENT:</u> Provides the facilities for the installation of seismic instruments for continual seismic data transmission using radio data link. The short period array focuses on seismic events which propagate vertically. Includes the installation of six boreholes to house sensitive seismic array elements. Each of the six array elements will be positioned 2 kilometers from the central recording building located in Keskin, Turkey to form a radial with six legs. Also, installation of one borehole to house broadband seismic elements will be provided. This seismic array is required in direct support of the Air Force Technical Applications Center (AFTAC) requirement to monitor provisions of "Safeguard D of the Limited Nuclear Test Ban treaty of 1963" and the upcoming taskings associated with the Comprehensive Test Ban Treaty. Improved mission capability will also be achieved by providing seismic data with adequate signal-to-noise ration and installation of digital equipment with wider bandwidth and greater dynamic range. <u>CURRENT SITUATION:</u> Seismic data is currently being collected through an existing short period array near Ankara, Turkey; however, the size and position of this array is ineffective and severely limits the amount of useful information that can be obtained. Furthermore, the city of Ankara

SHORT PERIOD SEISMIC ARRAY		ANKR963002
<p>has grown by a factor of four since this system became operational as background noise from cultural encroachment has reduced the collection capability by 50 percent. Construction at the nearby Turkish Military Academy, adjoining residential area and a nearby quarry are also reducing the effectiveness of the research station. To avoid this encroachment, AFTAC found it necessary to reduce the instrumentation from 16 SP seismometers to just 7 to eliminate the high noise locations. Additionally, the data transmission poles and cabling had to be relocated due to construction in the area thus further reducing the overall capability of the system.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Continued encroachment will further degrade seismic operations. Mission shut down will be a "Show-stopper" for AFTAC's global network of nuclear monitoring responsibilities. Failure to complete this project will eliminate the seismic data sharing arrangement currently established with the host nation. Also, it would preclude Turkey from being added to the ranks of the Comprehensive Test Ban Treaty monitoring participants. Finally, it would eliminate a strategic vantage point to provide surveillance of neighboring countries which desire to develop or expand nuclear weapons capabilities.</p> <p><u>ADDITIONAL:</u> A preliminary analysis of reasonable options for accomplishing this project was done. It indicates there is only one option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide." However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements." This project is not eligible for NATO funding.</p>

10. Description of Proposed Construction: Reinforced concrete foundation, floor slab, frame, masonry walls and tile roof. Includes parking, site improvements, fire sprinkler system, utilities and necessary support. Functional areas include: reception, multi-purpose rooms, restrooms, storage, isolation rooms, offices, laundry, kitchen, mechanical room and playground. Air Conditioning: 60 Tons.					
11. REQUIREMENT: 18,000 SF ADEQUATE: 0 SUBSTANDARD: 7,140 SF PROJECT: Construct a child development center (CDC). (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment requirement. This facility requirement is in accordance with the Military Child Care Act of 1989. A properly sized child development center is required to provide supervised care and a development experience for dependent children aged six weeks through twelve years. The facility must provide a comfortable, clean, educational environment where military service members and DoD civilians can leave their children on an hourly, daily, or drop-in basis without worrying about the level or nature of care. With service members on call for duty continuously, varied shifts and flex-time, it is imperative that they have reliable child care available. CURRENT SITUATION: The existing child development center is adequate to accommodate a maximum of 84 children, and daily attendance at the center averages 81, or 96%. At the present time, 150 children are on the waiting list. This project will provide a facility which will serve a total of 200 children. The existing facility is totally substandard and does not meet DOD criteria for child development centers. It is a prefabricated metal building, constructed as a temporary facility, which cannot

CHILD DEVELOPMENT CENTER		LJYC963001	
<p>accommodate infants. The overflow is turned away, and many parents have given up hope and left their children in the care of untrained, non-English speaking Turkish maids. Large numbers of single parents and dual-tasked military couples with children at Incirlik Air Base have great difficulty obtaining quality child care. After construction of this project, the existing child development center (7,140 SF) will be converted into a Morale, Welfare and Recreation storage warehouse. The cost of CDC care ranges from \$44 to \$86 per week. Licensed care is not available on the economy.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Lack of quality child care contributes to employee absenteeism, low morale and has a negative impact on the military and civilian work forces. Without adequate child care for the dependents of active duty military and DoD civilians at Incirlik Air Base, readiness will decline. Personnel that have the additional burden of worrying about the care of their children simply will not operate as effectively as those who know their families are well cared for. Families will continue to be forced to use unskilled, untrained child care providers. Lack of appropriate, caring supervision and developmental interaction is highly detrimental to the development of young children.</p> <p><u>ADDITIONAL:</u> This project is not eligible for NATO funding. This type of facility is not within an established NATO infrastructure category for common funding and will most likely continue to be a user responsibility. However, a precautionary prefinancing statement will be submitted to NATO in the event that the criteria changes for facilities of this type. Current NATO policy indicates that this item will continue to be a user responsibility. This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide" and DoDI 6060.2, "Child Development Center Programs", published in January 1993.</p>

10. Description of Proposed Construction: Upgrade sewage treatment plant. Install bar screens, comminutor, piping, sedimentation tanks, trickling filters, laboratory/workshop, sludge processing system, chlorination system, pump stations, flow meters and standby power. Repair pond liners. Demolish existing sewage treatment facilities. Provide laboratory equipment and repair effluent pipeline.					
11. REQUIREMENT: As required.					
PROJECT: Upgrade sewage treatment plant. (Current Mission)					
REQUIREMENT: This is a level I environmental compliance project. Provide a sewage treatment plant to meet DoD Final Governing Standards for wastewater discharge.					
CURRENT SITUATION: Base sewage effluent does not meet DoD Final Governing Standards (FGS) for wastewater discharge. The existing primary treatment process at the plant consists of an out-of-service clarifier and two undersized Imhoff tanks which are frequently out of service for maintenance. This results in heavy biological oxygen demand (BOD) loadings on the facultative lagoons and reduces the efficiency of the plant. Additionally, there is no laboratory or maintenance facility on the site to insure that effluents are in compliance with DoD FGS.					
IMPACT IF NOT PROVIDED: This base will not comply with the DoD Final Governing Standards for wastewater discharge. The existing plant's effluent will continue to pollute local streams. The plant will be out of compliance with the increasingly stringent host nation wastewater discharge standards. The likelihood of receiving notices of violation and fines will escalate.					
ADDITIONAL: This project is not NATO eligible. It is not within an established NATO infrastructure category for common funding, nor is it

10. Description of Proposed Construction: Construct reinforced concrete floor, foundations, walls, and roof system consistent with existing facility. Includes intrusion detection, fire detection and suppression, hoist, compressed air and work area for disassembly, maintenance and assembly. Upgrade power supply, heating and ventilation. Provide secure working/storage area.						
11. REQUIREMENT: 9,425 SF ADEQUATE: 5,094 SF SUBSTANDARD: 0 PROJECT: Add to missile maintenance shop. (New Mission) REQUIREMENT: A facility to support missile inspection, testing, assembly and repair, test and repair of ground support equipment, inspection and calibration. Includes areas for storage of supplies and equipment, administrative offices, and a ready/standby room. Provide a secure working/storage area for classified storage and training. Requires intrusion detection and controlled access. Due to the beddown of F-15 aircraft from Bitburg AB, the existing facility cannot meet the demands for additional missile maintenance. CURRENT SITUATION: The current missile maintenance shop was constructed in 1953 and expanded in 1976 to support additional munitions types. With the transition of F-15C/D aircraft to Lakenheath, there are now three additional types of munitions facilities housed in a two-bay facility. The current facility cannot adequately support the maintenance requirements with the additional air-to-air missiles added to Lakenheath's support requirement. As an interim measure, an old aircraft maintenance unit facility is currently being modified to handle the inspection workload but it does not have adequate ceiling height to install a hoist system to move munitions around the shop. This will force the maintenance crews to use forklifts to move equipment and munitions around the work

<p>area. This is a safety hazard. Additionally, the space in this facility is inadequate to meet the requirements of a missile maintenance bay. No other facility currently exists at Lakenheath to adequately support this requirement. This will force missile maintenance to be performed in a substandard workaround facility. Approximately 300 additional missiles were added to Lakenheath's support requirements by this beddown.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The maintenance crews will continue to use an inadequate workaround that will cause delays in maintenance and potentially hazardous working conditions. They will not be able to provide adequate maintenance to all the missiles in the Lakenheath inventory.</p> <p><u>ADDITIONAL:</u> This project is not eligible for NATO funding. A precautionary prefinancing statement will be issued to NATO for possible recoupment of U. S. funds, if the project becomes eligible in the future. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

10. Description of Proposed Construction: Clear site, excavate, and lay foundations; erect a brick building with pitched tile roof. Includes all necessary playgrounds, sidewalks, car parking, utilities, communications, water, electricity, and drains. Alterations to existing building to meet current standards. Provide security and fire protection. Demolish one building.					
11. REQUIREMENT: 17,100 SF ADEQUATE: 0 SUBSTANDARD: 8,350 SF PROJECT: Add to and alter child development center (CDC). (Current Mission) REQUIREMENT: This is a Level I Commander's Facility Assessment (CFA) requirement. This facility requirement is in accordance with the Military Child Care Act of 1989. Adequate facilities are essential for providing supervised care and developmental experience for dependent children aged six weeks to twelve years. The facility must provide space for multi-purpose rooms for children of different age groups, offices, storage, laundry, and support areas. The facility must provide a comfortable, clean educational environment where service members can leave their children on an hourly, daily, or drop-in basis without worrying about the level or nature of care. With service members on call for duty continuously, varied shifts and flex-time, it is imperative that they have reliable childcare available. CURRENT SITUATION: Existing facility is adequate to accommodate a maximum of 92 children. Daily attendance at the center averages 102, or 111%. At the present time, 121 children are on the waiting list. This project will result in a facility which will serve a total of 228 children. This shortfall does not include any additional spaces required to support the planned beddown in March 1995 of the 352 Special Operations Group. The

ADD TO AND ALTER CHILD DEVELOPMENT CENTER		QFQE933011R1
<p>lack of child development center space causes hardship for military and civilian families since alternatives are unreliable, inconveniently located, expensive, and do not provide the developmental opportunities available in a formal program. Child care off-base costs four times the average on-base rate and facilities do not meet standards set by the Military Child Care Act of 1989. The cost of off-base child care is between \$105 and \$150 per week and family day care is \$80 per week when licensed through the base. Demolish one 1,232 square foot facility.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Lack of quality child care contributes to employee absenteeism, low morale and has a negative impact on the military and civilian work forces. Without adequate child care for the dependents of assigned personnel, readiness will decline. Parents that have the extra burden of worrying about the care of their children simply will not operate as efficiently as those who know their families are well cared for. Families will continue to be forced to use expensive child care programs or place their children in inadequate care in the local communities, or the spouses will not be able to work.</p> <p><u>ADDITIONAL:</u> This project is not eligible for NATO funding. This type of facility is not within an established NATO infrastructure category for common funding and will most likely continue to be a user responsibility. However, a precautionary prefinancing statement will be submitted to NATO in the event that the criteria changes for facilities of this type. This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide" and DoDI 6060.2, "Child Development Center Programs", published in January 1993. A preliminary economic analysis of reasonable options for accomplishing this project (status quo, upgrade, new construction) was done. It indicates there is only one option that will meet the requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared.</p>

10. Description of Proposed Construction: The funds requested will be used to provide financing for architectural and engineering services and construction design for Air Force Military Construction Programs.					
11. REQUIREMENT: As required. REQUIREMENT: These planning and design funds are required to complete the design of facilities in the FY 97 Military Construction Program, initiate design of facilities in the FY 98 Military Construction Program and accomplish planning and design for major and complex technical projects with a long lead-time to be included in subsequent Military Construction Programs. Also provides funds for value engineering and for the support of construction management activities of projects that are funded by foreign governments and for design of classified and special programs.

ELMENDORF AFB (PAF) FXSB931012G 112-211	REPAIR AIRFIELD TAXIWAY	900
<p>Repair airfield taxiway. (Current Mission) This is a Level I Commander's Facility Assessment requirement. Adequate airfield taxiways in good condition are required for the safe operation of assigned and transient aircraft. The taxiways are required to provide aircraft access to 15 parking hardstands, two C-130 maintenance hangars, and the base fuel cell. The taxiways have deteriorated from the harsh winter climate and several years of snow removal operations. Pavement heaves are visible and spalls have developed. The old, brittle asphaltic concrete has developed a very consistent pattern of longitudinal and transverse cracks approximately every 50 feet along the taxiway lane. The damage is too extensive to repair with pavement patches. Deteriorated pavements can prove detrimental to aircraft engines and to the overall safety of aircraft operations. The taxiway pavements will continue to deteriorate. Advanced failure of the surface will eventually force closure of the taxiways, thereby impacting C-130 aircraft operations and increase the cost to repair the pavements. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

ELMENDORF AFB (MTC) FXSB949999 131-132	MILSTAR COMMUNICATIONS GROUND TERMINAL	850
<p>Construct a Milstar communications ground terminal support facility. (New Mission) A properly sized facility is required to house two 60 KW generators and an uninterruptible power supply (UPS) system for the Milstar Communications Ground Terminal located in an adjacent facility. The emergency power equipment and supporting facility must be designed to meet Milstar facility specifications. The Milstar system provides the National Command Authority (NCA) with the only worldwide, secure, two-way, anti-jam and survivable system with a low probability of detection/interception voice and data communication capability via satellites. Milstar terminal equipment for this site is scheduled for delivery in August 1996. The existing facility has no space available to house the new standby generators and uninterrupted power supply. Critical connectivity between NORAD/Space Command and other high priority users would be lost during crises, denying the ability to command and control military forces through all levels of conflict. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". Unlike Milstar ground communications terminals at other locations, this terminal requires no special shielding.</p>

<table border="1"> <thead> <tr> <th><u>STATE AND LOCATION</u></th> <th><u>PROJECT TITLE</u></th> <th><u>COST (\$000)</u></th> </tr> </thead> <tbody> <tr> <td colspan="3"><u>ARIZONA</u></td> </tr> <tr> <td>DAVIS-MONTHAN AFB (ACC) FBNV963002 211-159</td> <td>ALTER AIRCRAFT CORROSION CONTROL FACILITY</td> <td>1000</td> </tr> </tbody> </table> <p>Alter aircraft corrosion control facility. (Current Mission) This is a Level I environmental compliance project. Currently Davis-Monthan cannot comply with Title 17 of Pima County Code which requires that surface coating operations "be conducted in an enclosed area equipped with controls containing no less than 96 percent of the overspray". No more than 40 lbs per day of organic compounds containing photochemically reactive solvents may be emitted to the atmosphere. Modern corrosion control facilities are required that will support the aircraft maintenance needs without polluting the environment. This project will provide the ventilation and filtration system necessary to capture the VOCs and particulate matter, and render the facility capable of functioning within the limits of local and federal environmental regulations. The existing facility lacks adequate ventilation to capture particulates from paint overspray and paint sanding residue. The result is that particulates accumulate on the walls, floor and ceiling rather than in the exhaust air filters. This also results in increased exposure of workers to paint dust and hazardous air pollutants. The ventilation system draws in more outside air than can be filtered by the existing exhaust air filtration system. This forces the release of particulates through inadequately secured doors, windows and other openings. There are no provisions to capture and/or treat exhaust air VOCs from the exhaust air stream. The current system operates in direct violation of Pima County Code requiring capture of at least 96 percent of the overspray and limiting emission of organic compounds containing photochemically reactive solvents to less than 40 pounds per day. Davis-Monthan will be out of compliance with Pima County air quality regulations, subjecting the base to possible fines and penalties and/or closure of the aircraft corrosion control facility. Additional expenses induced in either case would be prohibitive and would jeopardize the flying support mission effectiveness. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in the Air Force Manual 86-2, "Standard Facility Requirements". This pollution control system will help reduce VOC emissions and contribute to the Air Force goal of reducing VOCs by 50% by 1999.</p>			<u>STATE AND LOCATION</u>	<u>PROJECT TITLE</u>	<u>COST (\$000)</u>	<u>ARIZONA</u>			DAVIS-MONTHAN AFB (ACC) FBNV963002 211-159	ALTER AIRCRAFT CORROSION CONTROL FACILITY	1000

(Current Mission) This is a Level I Environmental Compliance Project. Project is required to provide a storage facility meeting Federal and State Environmental Protection Agency (EPA) regulations. Facility shall be constructed so as to contain any hazardous materials spills until proper disposition of such materials can be accomplished. Travis AFB constructed a hazardous waste storage facility through the FY91 operations and maintenance (O&M) program to bring hazardous waste storage requirements into EPA compliance. The work was originally split into two companion projects (minor construction and repair) and funded accordingly with O&M funds. A subsequent Air Force Audit Agency audit recommended that the repair project was incorrectly classed and that construction funds should have been used to accomplish both requirements under a single project. The audit also determined the total construction costs to be \$600,000. Since construction costs exceed the legal limit for O&M construction, the project must now be congressionally approved and authorized through the MILCON process. The Air Force will be unable to reimburse the FY91 O&M appropriation as required by law and recommended by the auditor. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>			<u>STATE AND LOCATION</u>	<u>PROJECT TITLE</u>	<u>COST (\$000)</u>	<u>CALIFORNIA</u>			TRAVIS AFB (AMC) XDAT963800 442-257	HAZARDOUS WASTE STORAGE FACILITY	600

MOODY AFB (ACC) QSEU961000 871-183	UPGRADE STORM DRAINAGE SYSTEM	690
<p>Upgrade storm drainage system. (Current Mission) This is a Level II environmental compliance requirement. This project is necessary to satisfy the Clean Water Act requirement under 40 CFR 122.26 for storm water discharge. The Storm Water National Pollution Discharge Elimination System (NPDES) Permit was issued in 1994. As part of the permit, the base is required to be in compliance with their Storm Water Pollution Prevention Plan by 1997. Moody AFB will be required to certify that non-storm water discharges are not connected to the storm drainage system. Corrective actions are necessary to eliminate these non-storm water discharges. Moody AFB does not provide storm water runoff control measures from the industrial areas of the base. The lack of containment and berming allows drainage from potential spill sites in heavy industrial areas to discharge into various waterways and watersheds. There are existing non-storm water discharges into the storm drainage system which are not allowed by the NPDES Permit. Control of storm water runoff is essential to prevent pollution of Mission Lake and associated wetlands and Grand Bay wetlands. Control measures proposed for this plan are in accordance with the base's Storm Water Pollution Prevention Plan. Moody AFB will continue to risk contaminating its storm water runoff, thereby subjecting the base to enforcement action, monetary penalties and significant adverse publicity. If the project is not accomplished by the established deadline, the base will be in violation of the law and subject to receiving Notices of Violation (NOVs) and fines up to \$25,000 per day per violation. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

NELLIS AFB (ACC) RKMF961000 871-183	UPGRADE STORM DRAINAGE SYSTEM	600
<p>Upgrade storm drainage system. (Current Mission) This is a Level II environmental compliance requirement. This project is necessary to satisfy the Clean Water Act requirement under 40 CFR 122.26 for storm water discharge. The Storm Water National Pollution Discharge Elimination System (NPDES) Permit was issued in 1994. As part of the permit, the base is required to be in compliance with their Storm Water Pollution Prevention Plan by 1997. Installation of pollution control structures are required to divert runoff and prevent it from being contaminated. Nellis AFB does not provide adequate storm water runoff control measures from the industrial areas of the base as required by their NPDES Permit. Lack of containment and berming allow drainage from potential spill sites in heavy industrial areas to discharge into various waterways and watersheds. There are existing non-storm water discharges into the storm drainage system which are not allowed by the NPDES Permit. Control of storm water runoff is essential to prevent contamination of Sloan Channel which flows into Lake Mead. Control measures proposed for this plan are in accordance with the base's Storm Water Pollution Prevention Plan. Nellis AFB will continue to risk contaminating its storm water runoff, thereby subjecting the base to enforcement action, monetary penalties and significant adverse publicity. If the project is not accomplished by the established deadline, the base will be in violation of the law and subject to receiving Notices of Violation (NOVs) and fines up to \$25,000 per day per violation. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

CANNON AFB (ACC) CZQZ940022 871-183	UPGRADE STORM DRAINAGE SYSTEM	620
<p>Upgrade storm drainage system. (Current Mission) This is a Level II environmental compliance requirement. This project is necessary to satisfy the Clean Water Act requirements for controlling storm water runoff under 40 CFR 122.26. The Storm Water National Pollution Discharge Elimination System (NPDES) permit was issued in 1994. As part of the permit, the base is required to be in compliance with their Storm Water Pollution Prevention Plan by 1997. Cannon AFB will be required to certify that non-storm water discharges are not connected to the storm drainage system. Corrective actions are necessary to eliminate these non-storm water discharges. Installing pollution control structures will divert runoff and prevent it from being contaminated. Cannon AFB does not provide storm water runoff control measures from the industrial areas of the base. There are existing non-storm water discharges into the storm drainage system which are not allowed by the NPDES Permit. There are oil/water separators discharging underground. The lack of berms allows drainage from potential spill sites in heavy industrial areas to discharge into various waterways and watersheds. Control of storm water runoff is essential to prevent contamination of the North and South Playa Lakes on Cannon AFB. Control measures proposed for this plan are in accordance with the base's Storm Water Pollution Prevention Plan. Cannon AFB will continue to risk contaminating its storm water runoff, thereby subjecting the base to enforcement action, monetary penalties and significant adverse publicity. If the project is not accomplished by the established deadline, the base will be in violation of the law and subject to receiving Notices of Violation (NOVs) and fines up to \$25,000 per day per violation. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

SEYMOUR-JOHNSON AFB (ACC) VKAG931013 871-183	UPGRADE STORM DRAINAGE SYSTEM	830
<p>Upgrade storm drainage system. (Current Mission) This is a Level II environmental compliance requirement. This project is necessary to satisfy the Clean Water Act requirement under 40 CFR 122.26 for storm water discharge. The Storm Water National Pollution Discharge Elimination System (NPDES) Permit was issued in 1994. As part of the permit, the base is required to be in compliance with their Storm Water Pollution Prevention Plan by 1997. Seymour Johnson AFB will be required to certify that non-storm water discharges are not connected to the storm drainage system. Corrective actions are necessary to eliminate these non-storm water discharges. Seymour Johnson AFB does not provide storm water runoff control measures from the industrial areas of the base. There are oil/water separators that are hydraulically overloaded, deteriorated, and/or not functional. The lack of containment and berming allow drainage from potential spill sites in heavy industrial areas to discharge into various waterways and watersheds. There are existing non-stormwater discharges into the storm drainage system which are not allowed by the NPDES Permit. Control of storm water runoff is essential to prevent contamination of the Neuse River and Stoney Creek. Control measures proposed for this plan are in accordance with the base's Storm Water Pollution Prevention Plan. Seymour Johnson AFB will continue to risk contaminating its storm water runoff, thereby subjecting the base to enforcement action, monetary penalties and significant adverse publicity. If the project is not accomplished by the established deadline, the base will be in violation of the law and subject to receiving Notices of Violation (NOVs) and fines up to \$25,000 per day per violation. BROOKS AFB (MTC) CNBC880088 131-111	ADD TO AND ALTER COMMUNICATIONS FACILITY	233
<p>Add to and alter a communications facility. (Current Mission) A properly configured and adequately sized communications facility is required to support the Video Teleconferencing Center (VTC). The VTC provides for the real time exchange of both classified and unclassified information between HQ Air Force Material Command, Human Systems Center (HSC), and other Air Force bases throughout the United States. Brooks Air Force Base constructed a VTC through the FY 1989 operations and maintenance (O&M) program to provide for the real time exchange of information with organizations across the country. The entire project was financed with O&M funds instead of a mixture of equipment and construction funds. A subsequent Air Force Audit Agency audit recommended that construction funds should have been used to construct the facility which houses the VTC equipment. The audit also determined the total construction costs to be \$233,000. Since construction costs exceed the legal limit of \$200,000, which was in effect for O&M construction at that time, the project must now be congressionally approved and authorized through the MILCON process. The Air Force will be unable to reimburse the FY89 O&M appropriation as required by law and recommended by the auditor. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

KELLY AFB (MTC) MBPB911249 131-111	COMMUNICATIONS FACILITY	353
<p>Construct a communications facility. (Current Mission) A secure Video Teleconferencing (VTC) facility is needed to discuss classified information with representatives of Headquarters Air Force Material Command and other Air Force bases. The facility must comply with communications and electronic security requirements. The existing VTC is located on the fourth floor of the wing headquarters building. Numerous mission essential functions on this base rely heavily on the VTC to discuss and transmit defense information. However, classified information cannot be discussed in the existing VTC because utilities throughout the building emanate electronic or audio signals. The only access to the VTC is via three flights of steep and narrow stairs to the fourth floor of the wing headquarters building. These stairs make the VTC inaccessible to handicapped personnel. Also, parking lots around the headquarters building are extremely congested. These factors made it impractical to reconfigure the existing VTC, so a project for a new VTC was initially programmed in the FY91 O&M program. Design was completed and construction started; however, construction was halted when it became evident that the cost would exceed O&M construction limits set by law (\$200K at the time). Congressional approval and authorization through the MILCON process are needed so that construction can be completed. The capability to discuss and handle classified information through a VTC system will not exist at Kelly Air Force Base. Additional travel expenses will be incurred and the accomplishment of numerous mission support functions will be restricted or delayed. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

LANGLEY AFB (ACC) MUHJ910440B 610-284	ALTER AIR COMBAT COMMAND HEADQUARTERS FACILITY	263
<p>Alter an Air Combat Command Headquarters facility. (Current Mission) Provide a safe, dry, structurally stable and asbestos free facility for the support of Headquarters staff offices and functions. Include provisions for proper fire egress, low maintenance exterior finishes, adequate building and grounds run-off, and improved insect and fungi prevention measures. In addition, ensure that all improvements are in accordance with National Historic Preservation Act regulations. This project was executed in the FY91 operation and maintenance (O&M) program to eliminate numerous deficiencies. A subsequent audit by the Air Force Audit Agency stated that construction funds should have been used to alter this facility. Since construction costs exceeded the amount of \$200,000, which was the legal limit in effect for O&M construction at that time, the project must now be congressionally approved and authorized through the MILCON process. The Air Force will be unable to reimburse the FY91 O&M appropriation as required by law and recommended by the auditor. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in the Air Force Manual 86-2, "Standard Facility Requirements".</p>

SPANGDAHLEM AB (AFE) VYHK946009 211-183	SOUND SUPPRESSOR FOUNDATION	600
<p>Construct a sound suppressor foundation (T-9). (New Mission) This project is required to support the increased engine test requirements due to the relocation of F-15 aircraft from closing Bitburg AB. An adequate sound suppression facility for engine testing is required to effectively and safely perform power checks on aircraft engines after their repair. Sound suppression is required for these tests to allow full power checks with minimum annoyance to base population and the surrounding civilian communities. The T-9 sound suppressor is used for power checks on engines after they are removed from the aircraft. (A T-11 sound suppressor, requested in a separate project, is used for power checks on engines attached to the aircraft.) The base has a capacity to perform a maximum of 55 engine runs per month. Its assigned aircraft (F-16, F-15 and A-10), when all are on station, will generate a requirement to perform 70 runs per month. To meet this increased workload, the only acceptable work around will be to transport the delta (15 engines per month) to Ramstein AB for testing. At a cost of \$2,000 per engine for truck transport, and an initial start-up cost of approximately \$690,000 for the Ramstein facilities, this work around will total about \$1 million in the first year. Installation of the T-9 sound suppressor, and the companion T-11 sound suppressor proposed in another project, will cost a total of \$1.55 million. The cost avoidance of using the off-site facilities will pay back the cost of these two projects in about 18 months. The on-site testing capability will also preclude the requirement to transport engines (costing about \$4 million each) over land, on poor roads and often in poor weather conditions. Aircraft cannot be maintained and the Wing's flying mission and sortie rate will decrease to unacceptable levels. The operational requirement to perform 70 engine runs per month on base will not be possible. The only acceptable work around (off-base testing) will be initiated greatly impacting command funding. This project is partially NATO eligible. This project is programmed in the NATO Capability Package, however, the Capability Package is not yet approved. Current estimates predict a 50 percent NATO construction cost share but the estimated US cost share exceeds the O&M minor construction statutory limit. Additionally, NATO funding will not be received in time to avoid a severe mission impact. A precautionary prefinancing statement was submitted to NATO to allow recoupment of US funds. All known alternatives were considered during the development of this project. No other option could meet the mission requirements. There is no criteria/scope for this</p>

SPANGDAHLEM AB (AFE) VYHK946011 211-183	SOUND SUPPRESSOR FOUNDATION	950

Construct a sound suppressor foundation (T-11). (New Mission) This project is required to support the increased engine test requirements due to the relocation of F-15 aircraft from the closure of Bitburg AB. An adequate sound suppression facility for engine testing is required to effectively and safely perform power checks on aircraft engines after their repair. The T-11 sound suppressor is used for checks performed with the engines installed on the airframe. Sound suppression is required for these tests to allow full power checks with minimum annoyance to base population and the surrounding civilian communities. (The T-9 sound suppressor, requested in a separate project, is used for power checks on engines after they are removed from the aircraft.) The base has a capacity to perform a maximum of 55 engine runs per month. Its assigned aircraft (F-16, F-15 and A-10), when all are on station, will generate a requirement to perform 70 runs per month. To meet this increased workload, the only acceptable work around will be to transport the delta (15 engines per month) to Ramstein AB for testing. At a cost of \$2,000 per engine for truck transport, and an initial start-up cost of approximately \$690,000 for the Ramstein facilities, this work around will total about \$1 million in the first year. Installation of the T-11 sound suppressor, and the companion T-9 sound suppressor proposed in another project, will cost a total of \$1.55 million. The cost avoidance of using the off-site facilities will pay back the cost of these two projects in about 18 months. The on-site testing capability will also preclude the requirement to transport engines (costing about \$4 million each) over land, on poor roads and often in poor weather conditions. Aircraft cannot be maintained and the Wing's flying mission and sortie rate will decrease to unacceptable levels. The operational requirement to perform 70 engine runs per month on base will not be possible. The only acceptable work around (off-base testing) will be initiated greatly impacting command funding. This project is partially NATO eligible. This project is programmed in the NATO Capability package, however, the capability package is not yet approved. Current estimates predict a 54 percent NATO construction cost share but the estimated total US share exceeds the O&M minor construction statutory limit. Additionally, NATO funding will not be received in time to avoid a severe mission impact. A precautionary prefinancing statement was submitted to NATO to allow recoupment of US funds. All known alternatives were considered during the development of this project. No other option could meet the mission requirements. There is no criteria/scope for this

SPANGDAHLEM AB (AFE) VYHK946839 212-213	ADD TO MISSILE MAINTENANCE SHOP	930
<p>Add to Missile Maintenance Shop. (New Mission) An adequate facility is required to inspect, maintain, and repair the five missile types assigned. The addition of two new missile types to the Spangdahlem arsenal resulted from the beddown of F-15 aircraft from Bitburg AB. Due to the safety requirements associated with working on numerous and different weapons systems, coupled with the additional workload resulting from the increased missile inventory at the base, the existing facility requires the addition of one maintenance bay. The existing maintenance facility was barely able to support the missile maintenance workload at Spangdahlem which had only three types of missiles. The addition of the F-15 aircraft and its two new missile types has caused a severe overload, and missile maintenance at acceptable production and safety levels is not possible. The operation required 24 hour per day, seven days per week shift work to meet the workload for three missile types in an acceptably safe manner. The space available in the existing structure makes it impossible to work on more than one missile type at a time, resulting in labor intensive work arounds to satisfy safety requirements associated with keeping these weapons systems properly segregated. No other work arounds are available that will allow the existing facility to safely support the workload that has resulted from the addition of two new missile types. The availability and reliability of missiles will continue to degrade, thereby increasing the risk of a catastrophic accident. Without this addition, the risks to which personnel are exposed will remain unacceptable. The missile maintenance function will not be able to support the base mission. All known alternative options were considered during the development of this project. No other option could meet the mission requirements. This project is partially NATO eligible. This project is programmed in the NATO Capability Package, however, the Capability Package is not yet approved. Current estimates predict a 53 percent NATO construction cost share but the estimated total US cost share exceeds the O&M minor construction statutory limit. A prefinancing statement was issued. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

AVIANO AB (AFE) ASHE983004 141-489	SQUADRON OPERATIONS FACILITY	950
<p>Construct a squadron operations facility. (New Mission) This facility is required to accommodate the move of the 603d Air Control Squadron (ACS) from Sembach AB, Germany to Aviano AB, Italy. Space is required for squadron management, mission planning, briefing/debriefing, training, mobility operations, and logistics functions. The 603 ACS move from Sembach AB, Germany to Aviano AB, Italy was completed in July 1994. The squadron occupied existing facilities to the maximum extent possible at Aviano, but available space is 6000 SF short of the total required. The shortfall has been satisfied by acquiring temporary facilities, but a permanent structure must be provided as soon as possible to allow the 603 ACS to complete its beddown and resume efficient operations. The base was unable to provide permanent foundations or provide plumbing for the temporary facilities, forcing personnel to use temporary rest rooms. There are no other permanent facilities available on or off base to accommodate these functions. The 603 ACS will not be able to adequately and efficiently meet its mission requirements. It will continue to use temporary facilities, degrading its efficiency and impacting the morale of its personnel. All known alternative options were considered during the development of this project. No other option could meet the mission requirements. This project is not eligible for NATO funding. This type of facility is not within an established NATO infrastructure category for common funding and will most likely continue to be a user responsibility. However, a precautionary prefinancing statement will be submitted to NATO in the event criteria change for these type of facilities. There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project does meet the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements".</p>

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

FY 1996 NARRATIVE SUMMARY

This Military Family Housing request supports the policy that excellent housing facilities be provided for all military members and their families and that continual improvement in quality is the measure of excellence. We depend first on the local community to meet our housing needs. When local community housing is not available, military family housing will meet contemporary community living standards. Our housing inventory is operated and maintained at a standard that protects from deterioration, and maintains the quality level established by previous Congressional appropriations. Our goal is to provide quality homes that meet contemporary whole-house standards.

Family housing is one of the most important quality of life issues in the Air Force. Improving or replacing our aging housing inventory is our top facility priority. Our military members and their families expect and deserve homes which meet current standards of livability. In the era of downsizing, we cannot afford to lose highly trained Air Force members because adequate housing on or near our military installations is not available. Also, we cannot afford to let our existing military family housing inventory deteriorate, or fail to modernize it to reduce operating costs.

This budget provides a balanced program between construction, operations, maintenance, and leasing. Construction projects will replace worn-out and substandard homes in areas which violate airfield clearance and noise exposure criteria. We continue to propose projects to provide new support facilities at installations with the greatest need. The total construction funding level indicates the Air Force's commitment to replace or revitalize our existing inventory to meet contemporary standards. We are concentrating on our oldest homes and replacing or improving as economic analysis indicates.

The operations, maintenance, and leasing accounts predominately support "must pay" requirements such as civilian pay, service contracts, lease contracts, utilities, and required maintenance to keep existing housing units from further deteriorating. The maintenance account also supports our goal to arrest the deferred maintenance and repair (DMAR) growth as much as possible within our fiscal constraints.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

Also, the furnishings account provides for required government furniture overseas and initial issue of appliances to support new housing throughout the Air Force.

We believe this funding profile represents a well balanced program to achieve quality of life goals for military families within the fiscal constraints imposed. We respectfully request full and complete support for the Air Force family housing needs presented in this request.

Guam	Andersen AFB	Housing Office	\$ 1,700,000
Turkey	Incirlik AFB	150 Units	\$ 10,146,000

(b) PLANNING AND DESIGN. - Using amounts appropriated pursuant to the authorization of appropriations in section 2304(a)(5)(A), the Secretary of the Air Force may carry out architectural and engineering services and construction design activities with respect to the construction or improvement of military family housing units in an amount not to exceed \$8,989,000.

SEC. 2303. IMPROVEMENT TO MILITARY FAMILY HOUSING UNITS

Subject to section 2825 of title 10, United States Code, and using amounts appropriated pursuant to the authorization of appropriations in section 2304(a)(5)(A), the Secretary of the Air Force may improve existing military family housing units in an amount not to exceed \$85,059,000.

SEC. 2304. AUTHORIZATION OF APPROPRIATIONS, AIR FORCE

(a) IN GENERAL

(5) for Military Family Housing functions -

(A) For construction and acquisition of military family housing and facilities, \$249,003,000.

(B) For support of military family housing (including functions described in section 2833 of title 10, United States Code), \$849,213,000 of which not more than \$115,665,000 may be obligated or expended for leasing of military units worldwide.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

Appropriation Language

For expenses of family housing for the Air Force for construction, including acquisition, replacement, addition, expansion, extension and alteration and for operations and maintenance, including debt payment, leasing, minor construction, and insurance premiums, as authorized by law as follows: for [FY95] and FY96 Construction,[\$277,444,000] \$249,003,000, for Operations and Maintenance, and Debt Payment[\$824,845,000] \$849,213,000; in all [\$1,102,289,000] \$1,098,216,000: Provided: That the amount for construction shall remain available until September 30, [1999] 2000.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

NEW/CURRENT MISSION ACTIVITIES

In compliance with the Senate Appropriations Committee Report (100-380) on the FY 1989 Military Construction Appropriation Act, the Air Force has included the following exhibit that displays construction projects requested in two separate categories: new mission and current mission. "New Mission" projects are projects that support deployment and beddown of new weapon systems, new program initiatives, and major mission expansions. "Current mission" projects are projects that either replace inadequate existing facilities or construct new facilities which are not available to meet current requirements.

NEW CONSTRUCTION

NEW CONSTRUCTION

Program (In Thousands)
FY 1996 Program \$154,955
FY 1995 Program \$206,399

Purpose and Scope

This program provides for the construction of new homes where the local community cannot provide adequate housing and replacement of existing homes, where improvements are not economically feasible for Air Force personnel, and support facilities where existing facilities are inadequate. Cost reflect all amounts necessary to provide complete and usable facilities.

Program Summary

Authorization is requested for:

Construction of 176 new units, replacement of 1,027 units and 13 support facilities.

A summary of the funding program for FY 1996 is as follows:

<u>LOCATIONS</u> <u>NEW HOUSING</u>	<u>MISSION</u>	<u>NUMBER OF</u> <u>UNITS</u>	<u>REQUESTED AUTHORIZATION</u> <u>AMOUNT (\$000)</u>

10. Description of Proposed Construction: Reinforced concrete structure, concrete slab foundation and roofing system. Facility includes space for housing management and maintenance functions. Includes utilities, fire suppression system, prewiring for workstations, parking, site improvements and environmental compliance.					
11. REQUIREMENT: 13,800 SF ADEQUATE: 0 SUBSTANDARD: 14,419 SF PROJECT: Housing Management and Maintenance Facility. (Current Mission). REQUIREMENT: An adequate facility is required for managing base owned and operated family housing assets and for assisting all arriving personnel in finding on/off-base housing. The facility will contain all management functions including administration, operation, inspection, counseling and referrals. It must be located for convenient access by arriving personnel and other customers. It must be accessible by disabled/special needs personnel. Play areas will provide a safe, secure, and attractive environment for children of customers. A housing maintenance facility is required to provide for the care and repair of family housing units owned or under control of the Air Force. The facility will contain workshops, office, supply/storage, and self help services. A larger facility is required because of the long winter season and the remoteness of Alaska which increases the storage space requirements. Typical design criteria is provided in the AF MFH Support Facilities Design Guide which suggests 11,500 SF, but provides flexibility for more space where needed. CURRENT SITUATION: Housing management is currently located in a WWII, condition code 3, wooden building which is expensive to heat and requires an excessive amount of maintenance. This office is one of the first stop that incoming personnel come in contact with. The facility does not leave a good first impression of the base. The maintenance facility which the

<p>maintenance contractor was located in burnt down on 16 April 1994. As an interim measure, the contractor is operating out of an old indoor firing range which has been committed for disposal. The facility is inadequate in size to properly operate an efficient and effective maintenance operation.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The Air Force will continue to spend an excessive amount on utilities and maintenance on a facility which has outlived its usefull life. The housing maintenance function will continue to occupy a facility which is committed for disposal and inadequate for the maintenance contractor's use. Housing management and customer service personnel will continue to work in an inadequate facility which degrades the level of performance and service they are capable of providing.</p> <p><u>ADDITIONAL:</u> There is no criteria/scope for this project in Part II of Military Handbook 1190, "Facility Planning and Design Guide". However, this project meets the criteria/scope specified in Air Force Manual 86-2, "Standard Facility Requirements". An economic analysis has been prepared comparing the alternatives of new construction, renovate existing facilities and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project.</p>

<p>11. REQUIREMENT: 3,168 UN ADEQUATE: 2,021 UN SUBSTANDARD: 1,105 UN PROJECT: Replace Military Family Housing (Phase 3). (Current Mission) REQUIREMENT: This project is required to provide modern and efficient replacement housing for military members and their dependents stationed at Davis-Monthan AFB. All units will meet "whole house" standards and are programmed in accordance with Phase "A" of the Housing Community Plan. Replacement housing will provide a safe, comfortable, and appealing living environment comparable to the off-base civilian community. This is the third of multiple phases to provide adequate housing for base personnel. Of the units to be replaced in this multi-phase initiative, 134 are completed or included in prior programs. The replacement housing will provide a modern kitchen, living room, family room, and bath configuration, with ample interior and exterior storage and garages. The basic neighborhood support infrastructure will be upgraded to meet modern</p>

REPLACE MILITARY FAMILY HOUSING (PHASE 3)	FBNV950011	
<p>housing needs. 82 units are to be replaced with 80 with units in order to provide a less dense housing area and make room for community recreational and landscaped areas.</p> <p><u>CURRENT SITUATION:</u> This project replaces appropriated housing units which were constructed in 1975. These poorly/cheaply constructed units are deteriorating rapidly. While these are the newest units on base, they are in the worst condition because of the poor quality construction, and do not meet the needs of today's families, nor do they provide a modern home environment. Roofs, walls, foundations and exterior pavements require major repair or replacement due to the effects of age and the environment.. Pavements are showing signs of failure due to settlement. Plumbing and electrical systems are antiquated and do not meet current standards for efficiency or safety. Housing interiors are generally inadequate by any modern criteria. Bedrooms are small and lack adequate closet space. Bathrooms are small, and fixtures are outdated and energy inefficient. Kitchens have inadequate storage and counter space, cabinets are old and unsightly, countertops and sinks are badly worn. Flooring throughout the house is outdated, and contains evidence of asbestos. Plumbing and electrical systems are outdated and require abnormal maintenance and repair. Electrical circuits do not meet National Electric Code requirements. Lighting systems throughout the houses are inefficient and do not meet modern needs. Exterior storage is inadequate. There are no patios for outside living or entertaining. Some units fall short of authorized living space.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Major morale problems will result because some people will continue to occupy substandard housing while neighbors and friends are in upgraded units. The housing will continue to be occupied until it becomes uninhabitable because adequate, affordable off-base housing is not available. The current Housing Market Analyses for the base shows a projected deficit of 40 units, thus adequate or affordable off-base housing is unavailable and not an option for military families. Without this and subsequent phases of this initiative, repairs of these units will continue out of necessity, in a costly, piecemeal fashion, with no improvement in living quality.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, replacement was found to be the most cost efficient over the life of the project. Improvement costs represent 76% of the replacement costs. Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents. This project will be executed as a Request For Proposal. This project demolishes 82 housing units and constructs 80 to permit a reduction of density.</p>

REPLACE GENERAL OFFICER HOUSING	NKAK964002	
<p>Quarters (GOQ) was built in the mid-1950s for senior officer housing. The house does not meet GOQ space requirements, and is totally inadequate for the position and entertainment responsibilities of the Installation Commander. The kitchen configuration creates a circulation problem. Three of the four bedrooms and their closets are undersize. Bathrooms have outdated ceramic tile floors, wainscot, and vanity cabinets. Dining area is undersize. Heat pumps, water heater, and plumbing fixtures are at the end of their useful life. The garbage disposal is in poor condition. Below slab sanitary lines have deteriorated and need to be replaced. Bathroom receptacles lack ground-fault circuit interrupters, unit wiring lacks ground conductor and does not meet codes. The flat carport roof is leaking, causing the plywood deck to rot. Paint on wood fascias is peeling. Windows are energy inefficient and require replacement. Net square footage will be increased to authorized amount.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The base will continue to have substandard housing to support its most senior leader. The condition of the house will reflect poorly to the many dignitaries entertained in the house. As the house continues to age, accelerated deterioration of electrical, plumbing, mechanical, and other systems can be expected, with increasing and unacceptable maintenance and repair costs to the base. The housing occupant will continue to reside in an environment not compatible with his/her leadership position and entertainment responsibilities.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing, and status quo operation. Based on the net present values and benefits of the respective alternatives, replacement was found to be the most cost effective over the life of the project. The cost to improve the existing house represents 81% of the replacement cost. (An FY95 Improvement project for this house was determined to be inappropriate and too costly as additional structural deficiencies were identified during the planning and design process.)</p>

CONSTRUCT FAMILY HOUSING MANAGEMENT OFFICE	BAEY879003P2	
<p>The current office provides provides 1,920 SF of space for seven employees. This is less than 40% of the required space, and falls far short of providing minimum customer support. It is located five miles from the housing area it serves. Facility space limitations have forced four housing inspectors to locate in a separate facility 1/2 mile from the main office. The dispersed nature of personnel and housing functions complicates and delays operations and reduces effectiveness of personnel and programs. The office does not have a conference room to conduct training or meetings, nor is there a lounge area for customer use. No interior or exterior play areas are provided. The waiting area is extremely cramped and noisy due to computer printers which share the same space. The office has no private area for counseling. Restrooms are located in another part of the building which is assigned to totally different (non-housing) functions, and can only be accessed by traversing congested work areas. Customer parking is extremely limited, and is shared with the Services Squadron, Accounting and Finance, Civilian Personnel, Transportation Management, and an Airman Dining Hall. The result is a crowded parking area with little space for housing customers to park or maneuver moving trucks or vehicles with trailers. Existing housing management space will revert to Transportation and Services functions which currently occupy the majority of space in the existing facility.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Thousands of customers will continue to be served in a facility which is less than half the required size and totally inadequate for the purpose of greeting newly arrived personnel and assisting them in finding adequate living accommodations. All newly arriving personnel and many family members will essentially get the first "introduction" to their new location in a cramped, deteriorated and unprofessional working environment. Customer service will be substandard, and employee and customer morale will suffer due to the poor service environment.</p> <p><u>ADDITIONAL:</u> This project meets the criteria and scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide."</p>

11. REQUIREMENT: 2,411 UN ADEQUATE: 944 UN SUBSTANDARD: 1,443 UN PROJECT: Replace 67 Wherry Family Housing units. (Current Mission) REQUIREMENT: This project is required to provide quality of life improvements and energy efficient housing units to the existing area to enhance standards of livability for the residents. All units will meet "whole house" standards and are programmed in accordance with Phase 1 of the Housing Community Plan. Irrigation systems in common are required to provide a usable and aesthetic environment for the neighborhood. Replacement of housing will provide a safe, comfortable living environment comparable to the off-base civilian community. CURRENT SITUATION: These family housing units were originally built in the 1950's. They have not received any major renovations since that time

<p>period. The two bedroom units are more than 120 Net Square Feet under the authorized net floor area. The three bedroom units lack entry foyers and have at least one undersized bedroom. The harsh environment has taken its toll and the units have deteriorated beyond economical repair.</p> <p>Asbestos-containing building materials contribute significantly to the extremely high repair cost. The exteriors of these facilities have deteriorated to the point that all wooden surfaces need to be replaced. Plumbing and electrical systems are in such poor repair that constant maintenance is required to maintain operability. This housing area is very congested and presents a traffic flow safety hazard when cars park on the streets because the units lack driveways and garages.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The harsh desert environment will continue to take its toll on these old and deteriorated units. Asbestos will continue to limit maintainability, and future repair costs will be exorbitant due to environmental abatement requirements. Exterior surfaces will continue to deteriorate and huge maintenance costs will be incurred. Mechanical and electrical systems will fail, adding to the already heavy workload and high cost to maintain. The units will continue to be occupied until they become uninhabitable because adequate, affordable housing is not available. The current Housing Market Analysis shows a projected family housing deficit of 24 units.</p> <p><u>ADDITIONAL:</u> An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, replacement construction was found to be the most cost efficient over the life of the project. This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents.</p>

REPLACE MILITARY FAMILY HOUSING (PHASE 3)	XUMU964003	
<p>parking for guests. Also, basic neighborhood support infrastructure will be upgraded to modern standards. Neighborhood improvements will include landscaping, playgrounds, walks, handicap access ramps, signs, street lights, irrigation, recreation areas, fitness course and utility upgrades.</p> <p><u>CURRENT SITUATION:</u> These units are over 30 years old and have deteriorated to the point where replacement is the most economical alternative. Wiring and fixtures have been identified by the Fire Department and Base Safety as a fire hazard; wiring is brittle and exposed. There are no Ground Fault Interrupters (a life safety hazard). Fixtures are energy inefficient. Plumbing systems have succumbed to the effects of hard water and corrosion, resulting in severe constriction and pipe leakage. Overhead pipes in the attics leak, causing ceiling and property damage and irritation to occupants. Corroded sewers in and under the floor slab leak. Some roof structures are sagging. There is no family room and there is inadequate bulk storage. Kitchens have inefficient work space, poor circulation, worn out/insufficient cabinets. Bathroom fixtures, vanities, and appointments are worn and outmoded. Plumbing fixtures are worn and unattractive. Main and master baths are deteriorated and outdated, having shower enclosures and medicine cabinets which are corroded, discolored, and pitted. Additionally, the way the units are presently configured is inefficient. These houses have had no major upgrades since construction, and do not meet the needs of today's families, nor do they provide a modern home environment. Roofs, walls, foundations, and sidewalks require major repair or replacement due to the effects of age and the environment. Housing interiors are generally inadequate by any modern criteria. Unsightly utility wires and poles clutter the streetscape. There is a lack of trees on streets, lawns, and open spaces. Based on an increased requirement for 2-bedroom units, we will need to convert some of the 3-bedroom units into 2-bedroom units.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Air Force members and their families will continue to be housed without minimal water and electrical service. The occupants will suffer continual water leaks in their ceilings (due to leaking overhead pipes) causing damage to the ceiling, light fixtures, and furniture under the leaks. We would not be providing a living environment that promotes pride, professionalism, and individual dignity. The current Housing Market Analysis shows an on-base housing surplus of 276 units. None of the units being replaced are surplus units. Without this and subsequent phases of this initiative, costly piecemeal repairs will continue out of necessity with no improvement in the living quality.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of new construction, revitalization, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents.</p>

10. Description of Proposed Construction: Reinforced concrete floor slab and foundation, split-faced concrete block masonry walls, steel-trussed roof system, and tile roof. The project provides offices, restrooms, counseling and meeting rooms, customer waiting area, computer equipment room, and interior and exterior child play areas. Includes utilities, parking, landscaping, and all appurtenant work for a complete facility.				
11. REQUIREMENT: 5,200 SF ADEQUATE: 0 SUBSTANDARD: 3,133 SF PROJECT: Family Housing Management Facility. (Current Mission) REQUIREMENT: An adequate facility is required to serve customers and to provide for more efficient housing management. The facility must be handicapped accessible and have adequate parking for vehicles pulling trailers and small trucks which may be used by arriving personnel. The facility must provide office space, a conference room, private counseling rooms, administrative space, a reception and customer waiting area with multiple telephones, a computer room and storage space for equipment and publications, a kitchen area for use by families, and interior and exterior play areas for children of customers. Exterior areas must be provided with recreation equipment and be fenced for security. The facility exterior requires landscaping to enhance customer appeal. CURRENT SITUATION: Annually, this Family Housing Management Office houses or assists over 9,000 families and unaccompanied personnel living on-base and off-base. This includes service to a large number of DoD civilians as well. This housing office manages the assignment, termination, and maintenance of 2,076 family housing units and 172 mobile home spaces. Also, it manages 1164 dorm bed spaces. The existing Military Family Housing Office is in a substandard WWII-era wooden-frame structure, which was constructed in 1942 and does not meet the seismic code for earth

<p>quakes. This is one of the few remaining WWII-era facilities left in its area of the base. Age and the environment have taken their toll on the structure. The structure has dry rot and is termite-infested. The roof leaks and there are water stains on the ceilings. Wiring is old and does not meet electrical code. The underground utilities are original and are deteriorated. The facility is energy-inefficient, and the heating system is inadequate so that one-third of the facility is without heat. Restrooms are too small. The poor facility presents a very unfavorable impression to the thousands of customers who transit the facility each year. The present office is not large enough and is poorly configured to provide space for proper services and a proper atmosphere for both workers and customers. There is inadequate storage space. Existing space affords little privacy to families in counseling. There is no interior play area for children to use while parents are being counselled on housing opportunities and requirements. The facility will be demolished upon completion of this replacement project.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Customers will continue to be served in a substandard, inadequate facility. Workers, as well, will continue to work in the same inadequate facility. These factors, in turn, affect morale which, in turn, affects work performance. Work performance, in turn, affects the mission. The liability of having people in a structure that does not meet seismic code will remain.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide".</p>

10. Description of Proposed Construction: Work to include site utilities, paving, concrete walks, landscaping, concrete foundation, steel super structure, load bearing concrete block walls, masonry veneer, built-up roofing, decorative interior finishes. Project provides offices, restrooms, counseling and meeting rooms, customer waiting, computer equipment room, and interior and exterior child play areas. Air Conditioning: 6 Tons.					
11. REQUIREMENT: 3,250 SF ADEQUATE: 0 SUBSTANDARD: 1,188 SF PROJECT: Construct new 3250 sf Family Housing Management Office at Peterson AFB. (Current mission). REQUIREMENT: A new Family Housing Management Office to provide adequate space for managing Base family housing assets, for assisting all arriving personnel in finding adequate on or off base housing, and for managing furnishings for authorized base personnel. The facility must be handicapped accessible and have adequate parking for vehicles pulling trailers, and small trucks which may be used by arriving personnel. The facility must provide office space, a conference room, private counseling rooms, administrative space, a reception and customer waiting area, a customer referral area with multiple telephones, a computer room and storage space for equipment and publications, and interior play area for children of customers. CURRENT SITUATION: The existing Family Housing Management Office occupies a portion (1188 sf) of building 1042. This is 2062 sf less than what is required for this Base function to operate properly. Expansion of this facility is not feasible because of its growing responsibility to its customers. The facility does not have adequate space to accomodate housing management functions and newly assigned unaccompanied housing and

<p>furnishings management responsibilities. Existing space affords little privacy to families in counseling because there are no private offices for this purpose. There is no interior play area for children to use while parents are being counseled on housing opportunities and requirements. The parking, reception area and storage for this facility is substandard and well below what they need.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The existing operation will continue to lack adequate space and not be able to serve the Peterson Complex's military personnel with adequate housing assistance. The base has grown increasing the number of personnel (7,058) this office assists; customers will continue to be served in an extremely substandard, cramped and unprofessional environment. The housing office will not be able to provide the quality service to Peterson personnel.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190 "Facility and Planning and Design Guide".</p>

REPLACE MILITARY FAMILY HOUSING (PHASE 4)	BXUR964003	
<p>members.</p> <p><u>CURRENT SITUATION:</u> Housing units included in this project were constructed in 1975 under a low, constrained budget. Materials used in construction were of inferior quality, therefore, the units are suffering obsolescence and dilapidation. Existing units do not meet Air Force minimum space standards. Space deficiencies range from 100 to 200 square feet in various types of units. Floor layouts are dysfunctional, and do not allow maximum use of existing space. Family rooms are currently being used as family/secondary eating rooms. Living/dining areas are not defined. Due to limited space in the living and dining rooms the entire area is generally used as a living room. Fire safety and handicap requirements are not met in existing housing units. Doors and windows are of the original construction and do not meet current energy standards. Exterior living areas are inadequate. Due to the high density of the housing area it doesn't lend itself to privacy, therefore fencing and landscaping is required to provide privacy in the rear yards. The general appearance of the front yards is cluttered and unorganized. Carport structures are oriented in front of the housing units which blocks the view of the entrances. Also, lack of adequate outdoor storage has forced occupants to use the carports to store bikes, lawn furniture and other items, which detracts from the existing, cluttered state. Common areas are deficient of ample play yards and other amenities to serve the housing population. Due to the extensive amount of work required to correct deficiencies, modernize to contemporary standards and repair existing units, it has proven to be more cost effective to replace the units.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The lack of affordable housing in the Metropolitan Washington area and the lack of housing on base has forced lower ranking members into unsuitable dwellings in the less desirable neighborhoods. Affordable, adequate housing for military members is essential to mission readiness. Failure to correct deficiencies and modernize to current standards impacts the quality of life for the occupants, government resources and inadvertently impacts the mission.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project.</p>

10. Description of Proposed Construction: Includes tilt up masonry panels on steel frame, concrete floor slab, built-up roof, comprehensive interior design, utilities, parking and fencing. Area includes offices for counselors, inspectors, housing officer and assistant; storage and waiting/display area. Air Conditioning: 5 Tons.					
11. REQUIREMENT: 5,600 SF ADEQUATE: 0 SUBSTANDARD: 4,183 SF PROJECT: Family Housing Management Facility. (Current Mission) REQUIREMENT: An adequate facility is required to provide complete referral services and a full range of personal assistance to all eligible DOD personnel in locating suitable nondiscriminatory community housing. A relaxing environment is desired since this is usually the first stop for arriving travel-worn personnel and their dependents. The facility must be located for convenient access by arriving personnel and those already assigned to base housing. It must be handicap-accessible and have adequate parking for vehicles pulling and trailers and small trucks which may be used by arriving personnel. The facility must provide office space, a conference room, private counselling rooms, administrative space, a reception and customer waiting area, a customer referral area with multiple telephones, a computer room, storage space for equipment and publications, and interior and exterior play areas for children of customers. The facility exterior requires landscaping to enhance customer appeal. CURRENT SITUATION: The family housing management office provides service to over 12,900 families and unaccompanied personnel living off-base and manages the assignment, termination, and maintenance of 2,359 family housing units. In FY93 they assisted over 3,670 personnel in finding

HOUSING MANAGEMENT FACILITY	FTFA944009	
<p>off-base housing. The existing housing management office is a converted Wherry housing unit that was built in 1948. This facility does not provide the privacy necessary for the housing officer of the Housing Referral Office and counselors. Customers awaiting service must stand in the hallway because of lack of space. The run down condition of the building does not provide a professional atmosphere to personnel visiting the Housing Office, and degrades employee morale. Realtors, brokers, builders, apartment managers, and families arranging moves or filing complaints also use this facility. Because of the lack of space, the Housing Facilities Section has been relocated to a temporarily converted Wherry unit across the street. The average customer is in the office for 30-45 minutes and is assisted in all aspects of housing. Maintenance problems in the facility are a recurring nightmare, as the age of the facility and its mechanical and electrical systems are such that economical repairs are not possible.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Morale of housing office employees will continue to degrade. Customers will not receive the necessary privacy when dealing with housing office personnel and will continue to be served in an extremely cramped, deteriorated, and unprofessional environment. Lack of space eliminates any possibility of establishing private counseling areas. Unusual and costly resource commitment will be necessary to keep the existing facility habitable. Major repairs or improvements are not an option because of the age and condition of the facility and extensive investment required.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide", and the Air Force Housing Support Facilities Guide.</p>

10. Description of Proposed Construction: Provide a new family housing management center and new maintenance facility. Work includes reinforced concrete foundation and floor slab, masonry walls, and sloped roof. Includes offices, restrooms, counseling and meeting rooms, customer waiting area, computer room, and child play areas. Maintenance facility includes office space, equipment room and supply storage. Air Conditioning: 15 Tons.					
11. REQUIREMENT: 9,471 SF ADEQUATE: 2,771 SF SUBSTANDARD: 0 PROJECT: Family Housing Management Center and Maintenance Facility. (Current Mission) REQUIREMENT: Adequate facility is required for managing base owned/operated family housing and unaccompanied housing assets. Space is urgently required to assist all personnel in finding acceptable on or off base housing. Also required is a new maintenance facility to support the tremendous task of keeping all family housing units up to the highest Air Force standards. The requested size of both facilities is based upon the existing 680 family housing units. Per the new Air Force Housing Support Facilities Guide, the total of 680 family housing units authorizes small size housing office at 3215SF and small housing maintenance facility at 3532SF. This project complies with this guidance and the Housing Community Plan (HCP). CURRENT SITUATION: The Hurlburt Housing Management Office provides a vital service to over 6,500 military personnel and manages 680 family housing units. The existing housing office shares a building with the base billeting office. The building is over-crowded with no space for children's play area or separate rooms for private discussions. The housing maintenance functions are currently located in old trailers which

HOUSING MANAGEMENT FACILITY		NVZR940033
<p>half the size required and cannot adequately accommodate customers. The lobby is extremely small, which forces customers to wait (stand) in the entrance way until they can be served. No space is provided for a children's play area, which greatly adds to the confused environment as children tire and become restless as their parents await service. Some files have had to be located one mile from the office due to inadequate space and in an attempt to improve customer service. Three individuals are forced to share a 100 SF office. Two other individuals share a desk, and furnishings management and GOQ management personnel are forced to work in a different building which results in inefficient communications and a poor working environment. There is no private space for counseling or receiving complaints. The housing management office provides a vital service to over 6,000 permanent party families and manages 804 family housing units. In addition, the office serves all base unaccompanied personnel and manages 1,040 dormitory rooms. The existing facility will be demolished upon completion of this project.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Thousands of customers will continue to be served in a facility which is less than half the required size and totally inadequate for the purpose of greeting newly arrived personnel and assisting them in finding adequate living accommodations. All newly arriving personnel and many family members will essentially get their first "introduction" to their new location in a cramped, deteriorated and unprofessional working environment. Costly and wasteful resource commitment will be necessary to keep the existing facility habitable and useable.</p> <p><u>ADDITIONAL:</u> This project meets the criteria and scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide" and the Air Force Housing Support Facilities Guide."</p>

10. Description of Proposed Construction: Replace 70 housing units. Includes the demolition of 49 units, asbestos and lead base paint removal, site clearing, replacement/upgrade of utility systems and roads. Provides 2 bedroom units with attached garages, normal amenities to include parking, air conditioning, exterior patios, recreational areas, and whole neighborhood improvements.

11. REQUIREMENT: 2,136 UN ADEQUATE: 1,991 UN SUBSTANDARD: 145 UN PROJECT: Replace Military Family Housing (Phase 4). (Current Mission) REQUIREMENT: This project is required to provide modern and efficient replacement housing for military members and their dependents stationed at Patrick AFB, Florida. All units will meet "whole house" standards and are programmed in accordance with phase 4 of the North and Central Wherry Housing Replacement phasing plan of the Housing Community Plan. The housing replacement will provide a safe, comfortable, and appealing living environment comparable to off-base civilian communities. This is the last of four replacement phases replacing 550 Wherry units to provide adequate housing to base personnel. The replacement housing will provide a modern kitchen, living/dining room, bedrooms and baths, with adequate interior and exterior storage, and a single garage. Exterior parking will be provided for a second occupant vehicle and guest. The basic neighborhood support infrastructure will be replaced to meet modern

REPLACE FAMILY HOUSING PHASE 4	SXHT964005	
<p>housing needs. Neighborhood enhancements will include landscaping and recreational areas.</p> <p><u>CURRENT SITUATION:</u> This project replaces 70 Patrick AFB housing units that were constructed between 1952 and 1958. The existing units are one story, concrete block with flat roofs and detached garages (up to 170 feet away from housing units). The unit facades are stark and monotonous. The relationship of the garages to the units is poor, and private backyard space is poorly defined. The housing area is open, lacks any sense of human scale, and portrays a very barren and unappealing visual image. These houses are showing the effects of age, continuous heavy use, and the degradation due to the corrosive environment on Florida's coast. The built up gravel flat roofs have deteriorated to where they must be replaced. The exterior walls have developed cracks that allow water and moisture intrusion to the interiors. The infrastructure (sewer, water, electrical) have deteriorated beyond economic repair. The plumbing and heating/air conditioning systems inside the units have also deteriorated beyond economic repair. The bathrooms are small, fixtures are outdated and are energy inefficient. Bedrooms are small and lack adequate closet space. Lighting system throughout the houses are inefficient and are in need of replacement. The majority of units have asbestos in roofs, floor tiles, walls, and ceilings and lead base paint.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Air Force members and their families would continue to be housed in unsatisfactory conditions, affecting morale and the retention of quality personnel. Some personnel will continue to occupy substandard housing while neighbors are in new replaced units. The current Housing Market Analysis shows an effective housing deficit of 8 units. Without this last phase of the project, various costly repairs will be required for these units, with no improvement in the quality of life.</p> <p><u>ADDITIONAL:</u> This project is the fourth phase of the North/ Central Wherry Housing Replacement program, total breakout is as follows: FY93 (New 250, Demo 190), FY94 (New 155, Demo 215), FY95 (New 75, Demo 96) and FY96 (New 70, Demo 49). Total for the four phases are 550 new units and 550 units demolished. This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". Project has no impact on school. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project.</p>

4. PROJECT TITLE	5. PROJECT NUMBER	
REPLACE MILITARY FAMILY HOUSING (PHASE 2)	XLWU950100B	
<p>include landscaping, playgrounds, and recreation areas.</p> <p><u>CURRENT SITUATION:</u> The Wherry units to be replaced were constructed in the 1950s, and have received only routine maintenance and repair since being constructed. These houses do not meet the needs nor do they provide modern amenities for today's families. Roofs, walls, foundations, and exterior pavements require major repair or replacement. Plumbing and electrical systems are antiquated and do not meet current standards for efficiency or safety. Bedrooms are small and lack adequate closet space. Bathrooms are small, and fixtures are outdated and energy inefficient. Kitchens have inadequate storage and counter space, cabinets are old and unsightly, countertops and sinks are badly worn. Flooring materials are outdated and have evidence of asbestos. Additionally, existing Wherry Housing housing area is located within Tyndall's airfield Accident Potential Zone One (APZ I). These factors have justified the relocation of houses to be replaced.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Major morale problems will result because people will continue to occupy substandard housing. Because adequate, affordable off-base housing is not available, houses will continue to be occupied until they become uninhabitable. Current Housing Market Analyses shows a deficit of 248 units. Without this and subsequent phases, repairs of these units will continue out of necessity, in a costly, piecemeal fashion, with no improvement to the quality of life.</p> <p><u>ADDITIONAL:</u> An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Wholehouse renovation costs were found to be approximately 80% of the replacement costs. Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents.</p>

SENIOR OFFICER HOUSING	QSEU940140	
<p>Neighborhood enhancements will include landscaping of common areas. The Senior Officer housing area will be relocated to comply with the Housing Community Plan.</p> <p><u>CURRENT SITUATION:</u> The two housing units to be replaced were built in 1954 as enlisted duplex units and do not meet current standards for senior officer housing, nor do they provide the modern efficient home layout and amenities found in off-base communities. These units have never received major improvement since their conversion to SOQs and are showing the wear and tear of years of continuous use. The units are poorly configured and the utilities, cabinets and fixtures are all dated, substandard, and in need of replacement. The houses are constructed on concrete slabs, with wood frames. Service lines were placed beneath the concrete slab making replacement and repair difficult and expensive. Electrical, plumbing, mechanical, and structural systems need major repair, or complete replacement. Electrical systems are at maximum capacity. The roof structures require complete replacement, and the insulation, heating, and air conditioning systems are energy inefficient and need to be brought up to modern standards. The units are poorly located, are dislocated from the main housing area, and are within a high noise zone (80-85 Db) near the flightline. The HCP relocates these two SOQs to a site within the main housing area with the remaining four SOQ units, and constructs one new house to satisfy an existing deficit. Three "surplus" (but not upgradable) field grade units will be demolished to make room for this project.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The base will continue to have substandard housing to support senior leadership. The condition of the housing will reflect poorly to the many dignitaries frequently entertained in this housing area. As the housing continues to age, accelerated deterioration of electrical, plumbing, and other systems can be expected, with increasing and unacceptable maintenance and repair costs to the base. Housing occupants will continue to reside in an area which does not provide normal community amenities, or a living environment compatible with the leadership position and entertainment responsibilities of the occupants.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". Since this is essentially a replacement project, there will be no increase in the student population or impact on the ability of local school districts to support base dependents. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost effective over the life of the project. The cost to improve the existing housing represents 72% of the replacement cost for the same four units. This project demolishes eight housing units, replaces two, and builds one new, for a net loss of five housing units.</p>

10. Description of Proposed Construction: All site preparation, drainage improvements, slab on grade, splitface concrete masonry walls, sloped standing seam metal roof, and decorative interior finishings. Project provides offices, restrooms, counseling and meeting rooms, customer waiting area, computer equipment room, and interior and exterior child play areas. Includes all utilities, parking, landscaping, and demolition. Air Conditioning: 15 Tons.					
11. REQUIREMENT: 5,000 SF ADEQUATE: 0 SUBSTANDARD: 2,211 SF PROJECT: Construct Housing Management facility. (Current Mission) REQUIREMENT: An adequate facility is required for managing base owned/operated accompanied and unaccompanied housing assets, for assisting all arriving personnel in finding adequate on or off-base housing, and for managing furnishings for authorized base personnel. The facility must be located for convenient access by all personnel. It must be handicapped accessible and have adequate parking for vehicles pulling trailers, and small trucks which may be used by arriving personnel. The facility must provide office space, a conference room, private counseling rooms, administrative space, a reception and customer waiting area, a customer referral area with multiple telephones, a computer room, and storage space for equipment and publications, a kitchen area for use by families, and interior and exterior play areas for children of customers. Exterior play areas must be provided with recreation equipment and be fenced for security. The facility exterior requires landscaping to enhance customer appeal. CURRENT SITUATION: The existing wood frame facility was constructed in 1976. It is poorly configured for todays housing management requirements and is half the size required to support the assigned work force and

<p>accompanied and unaccompanied customers. The facility nor its restrooms are handicapped accessible or equipped. Required conference area, child play area , referral assistant area, private counselling areas, reception area, and customer areas are greatly inadequate or non-existent. The housing management office provides a vital service to over 3,500 permanent party families and manages 1,521 family housing units. In addition, the office serves all base unaccompanied personnel and manages 766 dormitory rooms. The existing facility will be demolished upon completion of the replacement structure.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Thousands of base customers will continue to be served in a facility which is half the required size and totally inadequate for the purpose of greeting newly arrived personnel and assisting them in finding adequate living accommodations. All newly arriving personnel and many family members will essentially get their first "introduction" to their new location in the existing cramped, deteriorated and unprofessional working environment. Costly and wasteful resource commitment will be necessary to keep the existing facility habitable.</p> <p><u>ADDITIONAL:</u> This project meets the criteria and scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide."</p>

11. <u>PROJECT</u> : Replace 39 family housing units (Current Mission). <u>REQUIREMENT</u> : Project will provide modern and efficient housing for military members and their families assigned to McConnell AFB. All units will meet "whole house/neighborhood" standards and provide a safe, comfortable, and appealing living environment comparable to the off-base civilian community. Construction must include tornado shelters for occupant safety. This project complies with the Housing Community Plan (HCP). <u>CURRENT SITUATION</u> : This project replaces Capehart housing units which are over 37 years old and are showing the affects of age and continuous heavy use. They have had no major upgrades since construction and do not meet the needs of today's families. Concrete carports pads and walks are cracking and heaving, and carport support posts are rotting. The exterior

4. PROJECT TITLE	5. PROJECT NUMBER	
REPLACE FAMILY HOUSING	PRQE969021	
<p>brick veneer is cracking due to foundation failure. Settlement has allowed termite intrusion, and extensive termite damage is evident. Bathroom plumbing and fixtures require replacement. Plumbing and electrical systems are antiquated and do not meet current safety codes or efficiency standards. Lighting systems throughout the houses are inefficient and do not meet modern needs. Off street parking is severely limited causing traffic congestion. Traffic flow in and around the housing area is inefficient. The units contain asbestos and lead paint which can be a health hazard to the occupants.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Air Force members and families will continue to be inadequately housed. Low morale and retention problems can be expected since suitable off-base housing is not available. The current Housing Market Analysis shows an off-base deficit of 632 units. Units will continue to deteriorate resulting in escalating operations, maintenance and repair costs to the Government.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facilities Planning and Design Guide". Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents. An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project.</p>

REPLACE MILITARY FAMILY HOUSING (PHASE 3)	AWUB967001	
<p>playgrounds, and recreation areas.</p> <p><u>CURRENT SITUATION:</u> This initiative replaces housing units to partially satisfy a housing deficit created by the prior demolition (1989) of over 600 units declared uninhabitable due to condition. The result is a severe shortage of housing on the base. According to the most recent Housing Market Analysis, a substantial number of families are unsuitably housed in off-base accommodations. Investigations determined that these families either live in housing below DoD standards, or in housing meeting DoD standards BUT exceeding their maximum housing allowance. With construction of 200 units in the FY94 and 95 programs, the base has a remaining deficit of 1286 units.</p> <p><u>IMPACT IF NOT PROVIDED:</u> There are no reasonable alternatives to living in substandard or expensive off-base housing if families wish to avoid lengthy involuntary separations pending assignment to base units. The base will continue to have a severe shortage of on-base housing which forces families to live elsewhere. The impact is major morale and/or financial problems for the affected families.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of construction, leasing, and status quo operation. Based on the net present values and benefits of the respective alternatives, construction was found to be the most cost effective over the life of the project. Since this is essentially replacement housing, and these families are already located in the community, there will be no increase in the student population or impact on the ability of the local school district to support base dependents. The local school authority concurs that no additional school construction will be required. This project will be executed as a Request For Proposal (RFP). To maximize opportunities for economy of scale, the RFP will include options for accomplishment with Phase 4 in the FY97 program.</p>

<p>11. REQUIREMENT: 5,259 UN ADEQUATE: 2,840 UN SUBSTANDARD: 1,613 UN PROJECT: Replace Military Family Housing (Ph 1). Replace 98 MFH units with all associated ancillary appurtenances, "Whole Community" facilities, and all required engineering support facilities. (Current Mission). REQUIREMENT: This work is required to replace aged housing which is inefficiently designed, inadequately appointed, improperly sited, obsolete in its configuration and engineering systems, and generally not useful. All units will meet "whole house" and are programmed in accordance with the Housing Community Plan. Replacement housing will provide a safe, comfortable, and appealing living environment comparable to the off-base civilian community. This is the first of multiple phases to provide adequate housing for base personnel. The replacement housing will provide a modern kitchen, living room, family room, bedroom and bath configuration, with ample storage and a single car garage. Neighborhood enhancements will include landscaping, playgrounds, and park areas.</p>

4. PROJECT TITLE	5. PROJECT NUMBER	
REPLACE MILITARY FAMILY HOUSING (PHASE 1)	MAHG964001	
<p><u>CURRENT SITUATION:</u> The existing units are unable to adequately meet contemporary Air Force design standards in their current configuration and condition. They are similarly unable to support efficient continued use if a major upgrade project is not implemented due to their numerous deficiencies, many of which simply cannot be overcome with improvements to existing facilities. Roofs, walls, and foundations require replacement. Plumbing and electrical systems are antiquated and do not meet current standards for safety or efficiency. All rooms are small and do not have necessary storage, cabinets, and fixtures. Heating and air conditioning systems require replacement.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Adequate housing will not be provided consistent with the requirements of the "Whole House, Whole Community" initiative for the design and construction of housing and support facilities in the housing vicinity. Major morale problems will result if this replacement initiative is not supported. People will continue to occupy substandard housing. The current Housing Market analysis shows a projected deficit of 806 units. Affordable off-base housing is not available.</p> <p><u>ADDITIONAL:</u> An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. This project is consistent with Keesler's Military Family Housing Community Development Plan and is the first phase of a multi-phased initiative to replace 34 units in Shadowlawn and 136 units in South Harrison Court. Phase 2 is programmed for FY 97. Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents.</p>

CONSTRUCT MILITARY FAMILY HOUSING (PH 1)/LAND ACQUISIT'N	YWHG969400	
<p>will be constructed to meet modern housing needs. Neighborhood enhancements will include landscaping, playgrounds, and recreation areas. Land acquisition (149 acres) is required for construction of the new housing area, and is sited directly adjacent to the existing housing area, and is an unencumbered, privately owned land parcel.</p> <p><u>CURRENT SITUATION:</u> The rural community surrounding Whiteman AFB does not have sufficient, adequate housing assets to support existing requirements. The latest Housing Market indicates a deficit of 599 housing units. The deficit is significant for Junior NCO grades. These are the families who can least afford to live off-base. Off-base housing is very difficult to find, and expensive. No land is available within current base boundaries, to support construction of additional homes.</p> <p><u>IMPACT IF NOT PROVIDED:</u> There are no reasonable alternatives to living in substandard or expensive off-base housing if families wish to avoid lengthy involuntary separations pending assignment to base units. The base will continue to have a severe shortage of on-base housing which forces families to live elsewhere. The impact is major morale and/or financial problems for the affected families.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of construction, leasing, and status quo operation. Based on the net present values and benefits of the respective alternatives, construction was found to be the most cost effective over the life of the project. The local school authority will be contacted to determine its capability to accept the increase in student population generated by this project. This project will be executed as a Request For Proposal (RFP). To maximize opportunities for economy of scale, the RFP will be included as an option for accomplishment of Phase 2 in the FY97 program.</p>

REPLACE SENIOR OFFICER HOUSING	RKMF964002	
<p>infrastructure will be upgraded to meet modern housing needs. Neighborhood enhancements will include landscaping of common areas.</p> <p><u>CURRENT SITUATION:</u> This project replaces five housing units which were constructed in 1957 and one constructed in 1968. These houses are showing the effects of age and continuous heavy use. They have had no major upgrades since construction, and do not meet the needs of today's families, nor do they provide a modern home environment. Roofs, walls, foundations and exterior pavements require major repair or replacement owing to the effects of age and the environment. The existing built-up roofing systems do not meet current roofing standards, degrade the overall appearance of the houses, have numerous leaks which have made already inadequate (by today's standards) insulation even less effective. Foundation and pavements are showing signs of failure owing to settlement. Plumbing and electrical systems are antiquated and do not meet current standards for efficiency or safety. Housing interiors are generally inadequate by any modern criteria. Bedrooms are small and lack adequate closet space. Bathrooms are small, and fixtures are outdated and energy-inefficient. Kitchens have inadequate storage and counterspace, cabinets are old and unsightly, and countertops and sinks are badly worn. Flooring throughout the houses is outdated and contains evidence of asbestos. Plumbing and electrical systems are outdated and do not meet modern building codes. There is no Ground Fault Interrupter Circuit protection, and many electrical outlets lack grounding protection. Lighting systems throughout the houses are inefficient and require replacement. The houses do not contain garage space to protect automobiles from adverse weather. Heating and air conditioning systems require replacement.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Major morale problems will result if this replacement initiative is not supported. The housing will continue to be occupied until it becomes totally uninhabitable. Generals and senior officers, who because of their responsibilities have been designated as critical for on-base housing, will be forced to move off-base diminishing their ability to perform their duties. Without this initiative, costly peacemeal repairs will continue out of necessity, with no improvement in the living quality.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, replacement was found to be the most cost effective approach to fix the units. However, since revitalization exceeded 70% of the replacement value of the houses, replacement construction was selected. Improvement costs represent 94% of the replacement value. Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents.</p>

<p>11. REQUIREMENT: 1 UN ADEQUATE: 0 SUBSTANDARD: 1 UN PROJECT: General Officer Housing. (Current Mission). REQUIREMENT: This project is required to provide modern and efficient four bedroom housing appropriate for family living and the entertainment responsibilities of the Wing Commander at Holloman AFB. This unit will meet "whole house" standards and is programmed in accordance with Phase "A" of the Housing Community Plan. The house will provide a safe, comfortable and appealing living environment comparable to the off-base civilian community. The housing will provide a modern kitchen, living room, family room, bedroom and bath configuration, with ample interior and exterior storage and two-car garage. Exterior parking will be provided for guests and an official vehicle. Neighborhood enhancements will include landscaping of common areas. CURRENT SITUATION: The existing unit was constructed in 1959 and has received no major renovation since original construction. The kitchen cabinets, carpet, walls, and ceilings are worn and in need of replacement.</p>

4. PROJECT TITLE		5. PROJECT NUMBER	
REPLACE GENERAL OFFICER HOUSING		KWRD953009	
<p>The size of the house is well below the authorized and required floor area for an Installation Commander's housing unit. The kitchen and dining areas are very small. The plumbing and electrical systems are antiquated and do not meet current standards for efficiency and safety. Electrical circuits do not meet National Electrical Code Standards. The heating and air conditioning systems require upgrade or replacement. The existing down-draft air handling system is outdated, inefficient, and difficult to keep in operation. Ceilings and exterior walls lack adequate insulation. Existing windows are single pane and not energy efficient. Floors are old, worn, and in need of replacement. Many lighting and plumbing fixtures are in need of replacement. Bedrooms are small and lack adequate closet space.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The base will continue to have substandard housing to support its most senior leader. The condition of the house will reflect poorly to the many dignitaries frequently entertained in the house. As the house continues to age, accelerated deterioration of electrical, plumbing, mechanical, and other systems can be expected, with increasing and unacceptable maintenance and repair costs to the base. The housing occupant will continue to reside in an environment not compatible with his/her leadership position and entertainment responsibilities.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, replacement was found to be the most cost efficient over the life of the project. However, since revitalization exceeded 70% of the replacement value of the houses, replacement construction was selected. Improvement costs represent 86% of the replacement value. Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents.</p>

<p>11. REQUIREMENT: 2,978 UN ADEQUATE: 1,085 UN SUBSTANDARD: 1,736 UN PROJECT: Replace 105 CGO family housing units, Phase 2. (Current Mission) REQUIREMENT: This project is required to provide modern and efficient replacement housing for military members and their dependents. All units will meet "whole house" standards and are programmed in accordance with Phase D of the Housing Community Plan. Replacement housing will provide a safe, appealing living environment comparable to that found in the civilian community. This is the second of multiple phases to provide adequate housing for base personnel. Of the 272 units to be replaced in this multi-phase initiative, 104 are completed or included in prior programs, and 63 will follow in subsequent phases.</p> <p>CURRENT SITUATION: These units were constructed in 1949 and have received only routine maintenance and repair since construction. These units are</p>

AIR FORCE		
3. INSTALLATION AND LOCATION		
KIRTLAND AIR FORCE BASE, NEW MEXICO		
4. PROJECT TITLE	5. PROJECT NUMBER	
REPLACE FAMILY HOUSING, PHASE 2	MHMV964001	
<p>undersized, energy inefficient, and would require a complete floor plan change to meet modern day standards. The fixtures in the bathrooms and kitchens are no longer reparable and must be replaced. The units lack common features found in homes off-base such as family rooms and master baths. The flat roofs require frequent emergency stop-gap maintenance. Asbestos is present in the flooring, insulation, interior walls, and roofing of each of these units. Lead-based paint is present on both the interior and exterior of the units. The neighborhood is too dense, leaving precious little privacy for families. These units have outlived their useful life; replacement is the most logical method to provide acceptable housing for these company grade officer members and their families.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Major morale problems will result if this replacement initiative is not supported. Some people will continue to occupy inadequate housing while neighbors and friends are in new, replaced units. Asbestos and lead-based paint will remain in the units, possibly exposing people to a known dangerous substance. The housing will continue to be occupied until it becomes uninhabitable because adequate, affordable housing is not available. The current Housing Market Analysis shows a family housing deficit of 147 units. Operations and maintenance of the existing units will continue at a costly rate due to deterioration of building systems and inadequate energy conservation design.</p> <p><u>ADDITIONAL:</u> An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, replacement construction was found to be the most cost efficient over the life of the project. This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents.</p>

POPE AIR FORCE BASE, NORTH CAROLINA		
4. PROJECT TITLE	5. PROJECT NUMBER	
CONSTRUCT MILITARY FAMILY HOUSING (PHASE 2)	TMKH967000	
<p>Neighborhood enhancements will include landscaping, playgrounds, and recreation areas. Land acquisition is required as no unencumbered land on Pope AFB or Ft Bragg Army Post is available to support this project.</p> <p><u>CURRENT SITUATION:</u> The community and Ft Bragg surrounding Pope AFB has insufficient, inadequate housing assets to support Pope requirements and programmed realignment actions. The latest Housing Market Analysis indicates a deficit (after completion of a companion FY95 project) of 418 housing units. The largest deficit is in 2-bedroom Junior NCO housing category. These are the families who can least afford to live off-base. Construction of off-base rental units has declined to very low levels, and available units rent for over \$400 per month. This cost drives available housing out of the price range of junior enlisted families. Land acquisition is required as no land on Pope or Ft Bragg is available to support this requirement.</p> <p><u>IMPACT IF NOT PROVIDED:</u> There are no reasonable alternatives to living in substandard or expensive off-base housing if families wish to avoid lengthy involuntary separations pending possible future assignment to base units. Families will continue to be forced to live off-base at greater distances from the base than are desirable and/or in expensive or otherwise unsuitable housing near the base. Ultimately, the mission will suffer from the effects of low morale and increased stress due to financial strains on families.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of construction, leasing, and status quo operation. Based on the net present values and benefits of the respective alternatives, construction was found to be the most cost effective over the life of the project. The local school authority will be contacted to determine its capability to accept the increase in student population generated by this project. This project will be executed as a Request For Proposal (RFP). To maximize opportunities for economy of scale, the RFP will include options for accomplishment with Phase 1 in the FY95 program to include land acquisition options.</p>

11. REQUIREMENT: 1 UN ADEQUATE: 0 SUBSTANDARD: 1 UN <u>PROJECT</u> : Replace General Officer Housing. (Current Mission) <u>REQUIREMENT</u> : This project is required to provide modern and efficient fourbedroom housing appropriate for family living and the entertainment responsibilities of the Wing Commander at Seymour Johnson AFB. This unit will meet "whole house" standards and is programmed in accordance with Phase "1" of the Housing Community Plan. The housing will provide a safe, comfortable and appealing living environment comparable to the off-base civilian community. The housing will provide a modern kitchen, living room, family room, bedroom and bath configuration, with ample interior and exterior storage and a two-car garage. Exterior parking will be provided for guests and an official vehicle. Neighborhood enhancements will include landscaping of common areas. <u>CURRENT SITUATION</u> : This project replaces a GOQ constructed in 1958. This 38-year old house is showing the effects of age and continuous heavy use and provides over 100 SF less living space than the GOQ standard. It has

4. PROJECT TITLE	5. PROJECT NUMBER	
REPLACE GENERAL OFFICER HOUSING	VKAG966002	
<p>had no major upgrade since construction and does not meet the needs of today's families nor does it provide a modern home environment. Walls, foundations, and exterior pavements require major repair or replacement due to the effects of age and the environment. Wall insulation is inadequate. Foundations and pavements are showing signs of failure due to settlement. Plumbing and electrical systems are antiquated and do not meet current standards for efficiency or safety. The interior is generally inadequate by any modern criteria. Bedrooms are small and lack adequate closet space. Bathrooms are small and fixtures are outdated and energy inefficient. The kitchen has inadequate storage and counter space, cabinets are old and unsightly, counter tops and sinks are badly worn, and plumbing and electrical systems are outdated. There are no Ground Fault Circuit Interrupters as are required by electrical codes. The number of outlets is minimal which results in the use of extension cords which can create a hazardous situation. Lighting systems throughout the house are inefficient and do not meet modern needs. Heating and air conditioning system requires upgrade or replacement.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The base will continue to have substandard housing to support its most senior leader. The condition of the house will reflect poorly to the many dignitaries frequently entertained in the house. As the house continues to age, accelerated deterioration of electrical, plumbing, mechanical, and other systems can be expected, with increasing and unacceptable maintenance and repair costs to the base. The housing occupant will continue to reside in an environment not compatible with his/her leadership position and entertainment responsibilities.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents. An economic analysis has been prepared comparing the alternatives of new construction, improvement, leasing, and status quo operation. Based on the net present values and benefits of the respective alternatives, replacement was found to be the most cost effective over the life of the project. The cost to improve the existing house represents 75% of the replacement cost.</p>

10. Description of Proposed Construction: Construct concrete foundation, metal frame structure with split block exterior and standing seam metal roof, to include all necessary finishes and utilities. Includes provisions for latrines, maintenance shop space, self-help store, controllers area, administrative offices and covered storage. Demolishes four facilities. Provides for landscaping and parking.
Air Conditioning: 10 Tons.

11. REQUIREMENT: 30,000 SF ADEQUATE: 22,194 SF SUBSTANDARD: 6,226 SF
PROJECT: Family Housing Maintenance Facility. (Current Mission)
REQUIREMENT: An adequate facility is required for conducting all housing maintenance activity for 1704 family housing units at Shaw AFB. The facility must be properly located for convenient access by housing occupants, maintenance personnel, and supply deliveries. The facility must provide space for the storage of benchstock materials, shop space for maintenance work, self-help areas for displays and customer service, maintenance work controllers, maintenance supervisor offices, latrines, and a covered nursery and storage area.
CURRENT SITUATION: The existing housing maintenance complex does not provide the required space to adequately serve housing customers. The storage area for appliances is located four miles away from the maintenance function, necessitating extra handling of appliances and resulting in wasted manhours and decreased response time to housing maintenance requirements. Existing housing maintenance facilities are poor in appearance, creating an initial substandard image of the overall housing development area. Appliance and carpenter repair functions are accomplished in two small covered sheds, hindering proper maintenance practices, especially during inclement weather. The lack of work space

AIR FORCE		
3. INSTALLATION AND LOCATION		
SHAW AIR FORCE BASE, SOUTH CAROLINA		
4. PROJECT TITLE	5. PROJECT NUMBER	
HOUSING MAINTENANCE FACILITY	VLSB950004	
<p>and appliance testing facilities necessitates taking repaired appliances to vacant housing units for proper testing. Material storage is located in a low ceiling metal structure which precludes proper and efficient storage of housing supplies. Inadequate covered storage forces open storage of valuable supplies and equipment. Existing administrative and controller offices are in a converted farmhouse, separated from the maintenance and storage facilities, creating decentralized control of housing maintenance functions. The small building does not have the layout or space to provide necessary customer support. Also, customer parking and maintenance vehicle service entrances are collocated, creating congestion and unsafe conditions for private vehicles, maintenance trucks, and housing occupants that converge into one small area. Due to antiquated heating, air conditioning, plumbing and electrical systems, as well as structural deterioration, four facilities will be demolished upon completion of the new facility.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Response to customer requirements for housing maintenance will continue to be delayed due to poorly designed and widely dispersed maintenance facilities. Movement of appliances for repair purposes or placement in back-up stocks will require extra time and handling, and will increase chances for handling damage. The housing maintenance complex will continue to detract from the overall appearance of the housing area. Major repair and improvement of existing facilities is not an option due to their deteriorated condition. Costly efforts will continue to be committed to keep the existing facilities habitable.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide" and the "Air Force Housing Support Facilities Guide."</p>

10. Description of Proposed Construction: Construct concrete foundation, metal frame structure with split block exterior and standing seam metal roof, to include all necessary finishes and utilities. Includes provisions for latrines, maintenance shop space, self-help store, controllers area, administrative offices and covered storage. Demolishes two facilities. Provides for landscaping and parking. Air Conditioning: 8 Tons.					
11. REQUIREMENT: 4,500 SF ADEQUATE: 0 SUBSTANDARD: 1,280 SF PROJECT: Construct Housing Maintenance Facility. (Current Mission) REQUIREMENT: An adequate facility is required for conducting all maintenance activity for 990 family housing units at Dyess AFB. The facility must be properly located for convenient access by housing occupants, maintenance personnel, and supply deliveries. The facility must provide space for the storage of benchstock materials, shop space for maintenance work, self-help area for displays and customer service, space for maintenance controllers, maintenance supervisor offices, latrines, and a covered nursery and storage area. Also required is secure exterior bulk and flammable storage. The convenience of collocating housing maintenance and self-help supplies will encourage housing occupants to be more active in caring for their houses. CURRENT SITUATION: The Housing Maintenance Facility serves 5,335 military members. Housing maintenance is presently performed by contract in office space located in two 30-year old, temporary wood structures which have exceeded their life expectancy. They are energy and functionally inefficient. As a result, maintenance costs are rapidly increasing. One of the 640 SF buildings is used as office space, and the other is used for storage. These unsightly structures are located in the middle of the

REPLACE MILITARY FAMILY HOUSING (PHASE 2)	MPLS964005	
<p>housing will provide a modern kitchen, living room, family room, bedroom and bath configuration, with ample interior and exterior storage and a single car garage. Exterior parking will be provided for a second occupant vehicle and guests. Neighborhood support infrastructure will be upgraded to meet modern housing needs.</p> <p><u>CURRENT SITUATION:</u> These two story units were built in 1951 and last renovated in the kitchen, bathroom, and patio areas between 1976 and 1978. These upgrades are now substandard and time-worn. Only routine change of occupancy maintenance and some HVAC repairs have since been accomplished. Roofs, exterior walls, exterior doors, and windows require major repair or replacement due to the effects of age and the environment. Plumbing and electrical systems are antiquated and do not meet current standards for efficiency or safety. Housing interiors are generally inadequate by any modern criteria. Bedrooms are small and lack adequate closet space. Bathrooms are small, and fixtures are outdated and energy inefficient. Kitchens have inadequate storage and counterspace, cabinets are old and unsightly and countertops and sinks are badly worn.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Air Force members and their families will continue to be housed in unsatisfactory conditions that affect morale, performance, and the retention of quality personnel. The current Housing Market Analysis shows an on-base housing deficit of 580 units. Without this and subsequent phases of this initiative, costly piecemeal repairs will continue out of necessity, with no improvement in the living quality.</p> <p><u>ADDITIONAL:</u> An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. This replacement housing project will not increase the student population or impact the ability of the local school district to support base dependents.</p>

10. Description of Proposed Construction: Construct management office including foundation, frame construction, HVAC system, parking lot, sidewalks, lighting, landscaping, entrance foyer, conference room, private offices for the Housing Manager, Assistant, and Facilities Chief, children's playroom, and break room. This project includes demolition of existing building.					
Air Conditioning: 8 Tons.					
11. REQUIREMENT: 3,200 SF ADEQUATE: 0 SUBSTANDARD: 3,198 SF PROJECT: Construct a Military Family Housing Management Office. (Current Mission). REQUIREMENT: Provide administrative and counseling space for the management of 1287 housing units. Must be conveniently located for accessibility by housing occupants and newly arriving personnel. Facility must include space for private counseling, offices, lounge/waiting area, conference room, and play area for children of parents awaiting service by housing personnel. Facility must have adequate parking and include provisions for access by the handicapped. CURRENT SITUATION: The Military Family Housing management office is located in a converted barracks building constructed in 1941. The structure requires excessive maintenance, is energy inefficient, projects an unfavorable appearance to military members and their families, is poorly configured for its current use, and is inconveniently sited. IMPACT IF NOT PROVIDED: The MFH Management Office will continue to require excessive maintenance and use excessive energy. Newly arriving military members and their families will continue to receive a poor first impression of Sheppard AFB. Service to the military personnel who process through and utilize the Management Office will continue to be hampered by

10. Description of Proposed Construction: All site preparation, drainage improvements, concrete footings and foundation, steel framing, masonry walls, and standing seam metal roof. Project provides administrative office space, work shops, parts/supply storage, customer waiting area, conference/break room, miscellaneous supply storage, restrooms, and mechanical room. Includes all parking, utilities, and landscaping. Air Conditioning: 15 Tons.					
11. REQUIREMENT: 5,800 SF ADEQUATE: 0 SUBSTANDARD: 3,200 SF PROJECT: Construct a Military Family Housing Maintenance Facility. (Current Mission) REQUIREMENT: An adequate facility is required for the MFH maintenance contractor to stage and conduct maintenance on all family housing units on Sheppard AFB. The facility must be located near the majority of family housing units yet visually screened to lessen the impact of an industrial facility placed adjacent to residential neighborhoods. The facility must provide handicap access, adequate parking for both employees and customers, and vehicular access for delivery trucks. CURRENT SITUATION: The MFH maintenance shop is located in a 3,200 SF wood frame facility that was built in 1952. The current facility is inadequately sized, poorly configured, energy inefficient, has inadequate parking for employees, and requires excessive maintenance due to the general deteriorated condition of the building. IMPACT IF NOT PROVIDED: The MFH maintenance contractor will be forced to continue operating from a facility that is inefficient and inconvenient to the customers of the housing maintenance operation. Cost associated with required maintenance of the existing facilities will become an increasing burden on available resources.

11. <u>PROJECT</u> : Replace substandard family housing units. (Current Mission) <u>REQUIREMENT</u> : Project will provide modern and efficient housing for military members and their families assigned at McChord AFB. All units will meet "whole house/neighborhood" standards and provide a safe, comfortable, and appealing living environment comparable to the off-base civilian community. Land acquisition of 20 acres is required. There is no land or housing available for use on Fort Lewis Army Post. <u>CURRENT SITUATION</u> : This project replaces houses constructed in 1941. These houses were identified as uneconomical to upgrade in 1972 and the FY73 Military Construction Authorization, Public Law 92-545, authorized the Secretary of Defense to declare these units substandard. These 55-year old houses are located in the high noise (65-70 LDN AICUZ) and industrial area of the base, are undersized, meet none of the "whole house/neighborhood" standards, and show effect of continuous heavy use.

AIR FORCE		
3. INSTALLATION AND LOCATION		
MCCHORD AIR FORCE BASE, WASHINGTON		
4. PROJECT TITLE	5. PROJECT NUMBER	
REPLACE FAMILY HOUSING, PHASE 1	PQWY964001	
<p>They have had no major upgrades since construction and do not meet the needs of today's families. There is no interior storage, the laundry is located in an exterior area common to two units used to house the heating system. There are no entry foyers, the only entry opens directly into the living room. Bedrooms are undersized with negligible closet space. Electrical, water and sewer systems are the original. Off street parking is limited to one paved space per unit or none due to terrain constraints.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Military members and their families will be forced to continue living in substandard, uninhabitable units because affordable off-base housing is not available. The current Housing Market Analysis, dated Apr 94, shows a deficit of 208.</p> <p><u>ADDITIONAL:</u> This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". AF/CE Ltr, undated, states, "Under no circumstances will the units be considered for improvement or upgrading", therefore, an economic analysis has not been accomplished. Since this is replacement housing, there will be no increase in the student population or impact on the ability of the local school district to support base dependents.</p>

10. Description of Proposed Construction: Reinforced concrete structure, concrete slab foundation and roofing system. Facility includes offices, restrooms, counseling and meeting rooms, customer reception area, computer/storage areas, and interior and exterior play areas. Includes utilities, fire suppression system, rewiring for workstations, parking, and site improvements. Air Conditioning: 7 Tons.					
11. REQUIREMENT: 4,500 SF ADEQUATE: 0 SUBSTANDARD: 0 PROJECT: Family housing management facility. (Current Mission) REQUIREMENT: An adequate facility is required for managing base owned and operated family housing assets, for assisting all arriving personnel in finding on or off-base housing, and for managing family housing furnishings operations (one-stop shopping concept). Facility will contain all housing management functions including administration, operation, inspection, counseling and referrals. It must be located for convenient access by arriving personnel and other customers. It must be accessible by disabled/special needs personnel. Plays areas will provide a safe, secure, and attractive environment for children of customers. CURRENT SITUATION: The existing housing management office is located in a converted family housing duplex facility. The conversion took place in 1978 when there was a surplus of housing. Over the years the housing situation has changed. Today the facility could be better utilized as a family housing unit and the base has a critical need for a facility that is designed to better accommodate the housing functions. The existing facility cannot be efficiently reconfigured to house the growth in staff. Functionally, the facility has many shortcomings and does not have many of the features required by today's standards. The existing facility will be

11. REQUIREMENT: 1,357 UN ADEQUATE: 800 UN SUBSTANDARD: 557 UN PROJECT: Repair by replacement 150 MFH units by constructing 150 new units at Incirlik AB, Turkey. (Current Mission) REQUIREMENT: This project is required to provide modern and efficient housing for military members and their dependents stationed at Incirlik Air Base. All units will meet modern housing standards. The housing will provide a safe, comfortable, and appealing living environment comparable to the standards provided in a typical American civilian community. The design will provide a modern kitchen, living room, family room, bedroom

<p>and bath configuration, with ample interior and exterior storage. Units will be provided with a car port and community parking for a second vehicle and visitor parking. The housing area will be provided with an adequate support infrastructure of roads and utilities.</p> <p><u>CURRENT SITUATION:</u> Incirlik has a large deficit in Military Family Housing facilities. The on-base MFH consists of 950 units. 800 units were constructed in 1982 thru 1985 and are adequate facilities. The remaining 150 MFH units were constructed in 1961 which are in substandard condition and beyond economical upgrade/improvement. Despite extensive maintenance and repair efforts and expenses, settlement and shifting of foundations causes continuing structural damages. Cracks in the foundation are over an inch wide and run the length of the unit with differences of 1" to 4" in elevation across the crack. Electric, mechanical, and other utility systems are outdated and do not meet energy capacity and efficiency requirements. Three (3) bedroom units do not have the second bathrooms as required by US Air Force Standards Most off-base housing in the Middle-East like in the city of Adana lacks the normal ammenities that American Military personnel and their families require, namely central HVAC. Local housing is poorly constructed and the local water does not meet potable water standards. Incirlik's geographical location in the Middle East makes it a primary target for terrorist activity. AFOSI REGION 5/EAC wrote a classified assessment titled, "SUBJECT: Threat Assessment for off-base housing at Incirlik AB, TU (U)," 5 JULY 1994. Paragraph 2 provides an Unclassified summary as follows: UNCLASSIFIED: "2. (U) Terrorist threat: Both the Department of Defense and the Department of State assess the terrorist threat to Americans throughout Turkey as high. This assessment is based upon the existence of terroist organizations operating in Turkey with demonstrated histories, capabilities, and intentions of targeting..." (See ADDITIONAL)</p> <p><u>IMPACT IF NOT PROVIDED:</u> There are no alternatives to living in substandard or expensive housing if families desire to avoid lengthy and costly (both finacially and psychologically) "voluntary" separations. The impact will be major morale and/or financial problems for the affected families. The lower quality housing off-base will worsen the quality of life for our military personnel and their familiy. Off-base housing will not provide the security against terrorism that on-base housing can. The US Government will continue to spend MFH funds conducting piecemeal maintenance and repair on outdated facilities.</p> <p><u>ADDITIONAL:</u> This project is not eligible for NATO funding. This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide". An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, replacement construction was found to be the most cost efficient over the life of the project.</p> <p>Continued from CURRENT SITUATION, UNCLASSIFIED: "... as well as attacking American personnel and resources in Turkey. This threat can be discussed under three areas: Indigenous, Separatist, and Transnational terroism."</p>

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

POST ACQUISITION CONSTRUCTION

Program (In Thousands)
FY 1996 Program \$85,059
FY 1995 Program \$61,770

Purpose and Scope

The Air Force operates approximately 120,000 family housing units. The average age of housing units in the Air Force inventory is over 30 years. Over 60,000 of these units now require improvements or renovation to meet contemporary living standards during the next decade. Many of these units require major expenditures to repair or replace deteriorated mechanical, electrical, or structural components, and to provide some of the modern amenities found in comparable community housing. The Post Acquisition Construction Program provides this needed revitalization. Each project also includes a significant amount of concurrent maintenance and repair to maximize the project cost effectiveness (average per project is 60%).

The Air Force is the acknowledged DoD leader in developing the "whole house" revitalization concept. Whole house is the combination of needed maintenance and repair together with improvements to bring the unit to contemporary standards. In addition, we are looking beyond the house to the entire housing area in our requirements plan. Our "whole neighborhood" concept is being developed and includes the development of neighborhood vehicular and pedestrian circulation concepts to consider siting, density, landscaping, parking, playgrounds, recreation area and utilities, in addition to the housing unit itself.

Consistent with Authorization and Appropriation Committees' language in FY 90, the Air Force is seeking to maintain funding in this account to continue revitalizing our aging homes. Consistent with Appropriation Committees' language in FY 85, the Air Force has gathered data on the post acquisition construction projects to detail past projects on these units and any future work being programmed within a three year period. This information is provided as a part of this submittal.

Program Summary

Authorization is requested for:

- (1) Various improvements to existing public quarters, as described on DD Form 1391.
- (2) Appropriation of \$85,059,000 to fund projects in FY96.

NOTE: Projects within the program are within the statutory limitation of \$50,000 per unit adjusted by area cost factor, except as identified by separate DD Form 1391.

TOTAL REQUEST					85,059
10. Description of Proposed Construction: Includes all work necessary to revitalize military family housing by providing: air conditioning, where authorized; modern functional layouts; soundproofing; and utility and site improvements. Energy conservation actions include new and additional insulation, storm windows, solar screens, and more efficient heating and cooling systems. (Continued on next pages.)					
11. <u>PROJECT</u> : This request is for appropriation of \$85.059 million to accomplish improvements in family housing units.					
<u>REQUIREMENT</u> : To revitalize and improve the livability of older, obsolete family housing units, to conserve energy in these older housing units, and to bring utility systems up to current safety standards. Whole-house improvements includes but are not limited to: kitchen upgrades, bathroom additions/upgrades; repair/replacement of roofs, upgrade of mechanical & electrical systems, replacement of windows, doors, floors and exterior improvements (patios, fences, etc.)					
<u>CURRENT SITUATION</u> : The majority of these housing units were constructed since the late 1940's using various design and construction criteria, with different types of material, installed equipment, appliances, livability, and appearance. Many utility and structural systems were designed and constructed during years of plentiful, inexpensive energy resources. Insulation, storm windows, etc., not previously cost effective, are now wise investments. This program will prolong the useful life of many of our older, less modern units by enhancing livability, reducing operation costs and improving safety aspects.					
<u>ADDITIONAL</u> : These projects meet the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide" unless noted on the individual DD Form 1391s.

AREA COST FACTOR					1.06
10. Description of Proposed Construction: Upgrade 76 housing units, supporting facilities, and community development improvements. Work will include alteration of interior spaces, improvement and repair of kitchens, bathrooms, and other rooms, windows, doors, finishes, lighting fixtures, new roofing, garages/carports, mechanical, electrical, and utilities systems, yards, walks, driveways, fencing, and asbestos and lead removal.					
11. REQUIREMENT: 4,743 UN ADEQUATE: 190 UN SUBSTANDARD: 301 UN PROJECT: Improve Family Housing Phase 7. This includes community development improvements. (Current Mission). REQUIREMENT: Project is required to upgrade existing housing to current construction codes and livability standards to extend usable life of the units. This will include the upgrade of 76 existing units in accordance with the Air Force "Whole House Modernization Concept". In adjacent areas, a Community Development Plan (CDP) will also be a part of this project to include paved walking paths, upgraded and new playgrounds, area landscaping, pedestrian crossings and other miscellaneous improvements. This is the seventh of multiple phases to upgrade 491 houses. A total of 245 units have been upgraded or were approved in previous phases. Also 13 GOQ's have been renovated under other Whole House projects. This project is based on and conforms in principal to the Housing Community Plan, dated 29 July 91. CURRENT SITUATION: The housing units included in this project were constructed in 1965 & 1975 using a tract housing concept, with low cost/high maintenance materials. Due to existing functional arrangement of partition walls, kitchens, dining, and laundry room areas, poor utilization of space exists. Location of kitchen appliances, counter space, and existing partition arrangements results in poor traffic flow.

3. INSTALLATION AND LOCATION		
PETERSON AIR FORCE BASE, COLORADO		
4. PROJECT TITLE	5. PROJECT NUMBER	
IMPROVE FAMILY HOUSING PHASE 7	TDKA924001P1	
<p>Lighting fixtures are poorly located and old ranging in age from 18 to 26 years old. Because of age and wear, complete renovation of the bathrooms is required. Existing surface finishes are antiquated and require upgrading. The metal windows with exterior storm windows have worn sliding sashes that are loose and binding. Most units lack adequate storage. Insulation, new roofing and new exterior siding are needed. Asbestos and lead based paint require removal. Surrounding outdoor recreation areas are inadequate and require upgrading and improvement.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Current housing units do not satisfy the current Air Force Quality of Life standards, forcing military families to live in facilities that are sub-standard and not consistent with the quality of today's housing construction. Housing units will continue to deteriorate at a rapid rate requiring high maintenance, repair and other contract work. The exterior surrounding community recreation areas will continue to be less than adequate. The most recent Housing Market Analysis shows a housing deficit of 1669 units.</p> <p><u>WORK ACCOMPLISHED IN PREVIOUS THREE YEARS:</u> None.</p> <p><u>WORK PROGRAMMED FOR NEXT THREE YEARS:</u> None.</p> <p><u>ADDITIONAL:</u> An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, improvement was found to be the most cost efficient over the life of the project. The MFH Community Plan suggested phasing plan was set up for approximately 10 years. The replacement cost of the 76 units ranges from \$101,600 to \$143,900. The work in this project does not exceed a maximum of 68% of the replacement cost of any one of these units.</p>

10. Description of Proposed Construction: Improve 62 Capehart units. Renovate kitchens and bathrooms; add family rooms, bathrooms, privacy fencing, garages, and trash enclosures. Relocate washers/dryers to main level and patios next to the family room/kitchen. Functional layouts will be modified and square footage increased as required. Repair interior and exterior features and landscape as required. Construct two playgrounds. Grade Mix: 62 O4-O10.				
11. REQUIREMENT: 1,481 UN ADEQUATE: 75 UN SUBSTANDARD: 1,154 UN <u>PROJECT</u> : Provides improvements and repairs to 62 Capehart military family housing units and constructs two playgrounds. <u>REQUIREMENT</u> : Project is required to provide adequate quarters for military members and their families assigned to this installation. All units will meet "whole house" standards and are programmed in accordance with the Housing Community Plan. <u>CURRENT SITUATION</u> : These units were constructed in 1959. Kitchens, baths, windows, and siding were partially renovated between 1977 and 1983. Units do not meet current DOD standards. Kitchens need modifications to provide adequate storage cabinet and countertop areas. Most units do not have enough bathrooms. Formal/informal dining areas are too small and very few units have family rooms. The units require maintenance and repair on plumbing, heating, and electrical systems. Closet doors are difficult to operate and most laundry areas are in the basements away from the bedrooms. Mitigation of asbestos, radon, and lead-based paint is required in some units to meet EPA and Air Force standards. Existing carports and entry foyers are inadequate for climatic conditions. Landscaping is poor to non-existent. <u>IMPACT IF NOT PROVIDED</u> : Occupants will continue to live in substandard

<p>housing in units that do not meet Air Force standards or are of comparable quality to off-base housing. Operations and maintenance costs will continue to increase due to the age and deterioration of the facilities and building systems. Energy consumption will increase and utility expenses will continue to escalate. Morale and retention of quality Air force people will be reduced. The units will become uninhabitable.</p> <p><u>WORK ACCOMPLISHED IN PREVIOUS THREE YEARS:</u> Includes some radon mitigation (average cost, \$2,700/unit), some minor roof repairs (\$1,400/unit average), and basement leak repairs (\$4,500/unit average).</p> <p><u>WORK PROGRAMMED FOR NEXT THREE YEARS:</u> None</p> <p><u>ADDITIONAL:</u> The average replacement costs for the two unit types in this project are \$129,000 and \$150,000. The total work included in this project represents a maximum of 50% of the replacement cost of an individual unit. Economic analysis demonstrates improving these units is the most economical way to continue to operate them. This project meets the criteria/scope specified in Part II of Military Handbook 1190, "Facility Planning and Design Guide".</p>

10. Description of Proposed Construction: Provides interior and exterior renovation of 128 housing units. Includes utility upgrade and additions to meet standards. Upgrades kitchens, bathrooms and flooring, improves floorplans, provides increased energy efficiency, privacy fencing, patios, playgrounds and recreation areas, and replaces carports with garages. Includes appliances, demolition, and asbestos/LBP and Radon remediation.					
11. REQUIREMENT: 1,853 UN ADEQUATE: 1,563 UN SUBSTANDARD: 304 UN PROJECT: Improve 128 Military Family Housing units (Phase 1). REQUIREMENT: This project is required to provide modern and efficient housing for military members and their dependents stationed at Moody AFB. The housing must be upgraded to meet current life safety codes and to provide a comfortable and appealing living environment comparable to the off-base civilian community. This is the first of multiple phases to upgrade 304 houses. All units will meet "whole house" standards and are programmed in accordance with phase "A" of the Housing Community Plan. Renovated housing will provide a modern kitchen, living room, dining room, bedroom and bath configuration, with ample interior and exterior storage and garages. Parking will be provided for a second vehicle and/or visitors. Neighborhood improvements are required and will include landscaping, playgrounds and recreation areas. The support infrastructure (roads and utilities) will also be upgraded to meet modern living needs. CURRENT SITUATION: This project upgrades and modernizes housing which was constructed in 1965-1972. These houses require major renovation and repair to correct deterioration resulting from age and heavy use. They have had no major upgrades since construction, and do not meet the needs of today's families, nor do they provide a modern home environment. Kitchens are small and poorly configured. Bathrooms also require

10. Description of Proposed Construction: Improve four General Officer units. Reconfigure and upgrade kitchens; upgrade bathrooms, mechanical and electrical systems. Replace doors, roofs, siding, and add insulation. Expand master bedroom, repair porches and ceilings, paint interior, and replace carpet.

11. PROJECT: Improve 4 General Officer units.

REQUIREMENT: To provide adequate quarters for the McGuire Wing Commander, Numbered Air Force Commanders, and Air Mobility Warfare Center Commanders adequate quarters commensurate with their responsibilities and duties. This project is programmed to meet "whole house" standards IAW the McGuire AFB Housing Community Plan.

CURRENT SITUATION: The existing units are over thirty years old and the scope of repairs required are beyond the capability of the scheduled yearly maintenance limits. Major renovation is required to correct deterioration resulting from age and heavy use. The units have recieved only routine maintenance and repairs and do not meet the needs of today's family nor provide a modern home environment. The climatic controls are energy inefficient and have exceeded their economic life span. The electrical system does not meet current safety codes and the panel boxes exceed capacity. The radiant hot water heating system leaks and has caused extensive damage to the ceilings and floors. The bathrooms are small and have outdated fixtures. There is insufficient closet and storage space.

IMPACT IF NOT PROVIDED: Units will continue to deteriorate resulting in escalating operations, maintenance and repair costs to the Government. Energy consumption will increase due to age and deterioration of inadequate and inefficient building systems causing utility costs to

IMPROVE MILITARY FAMILY HOUSING (HISTORICAL UNITS)	TMKH904000	
<p>major upgrades, other than kitchen remodeling, since construction, and do not meet the needs of today's families, nor do they provide a modern home environment. Interior finishes need replacement and upgrade. The heating and air conditioning systems are inefficient and require replacement, to include ducting. There is no wall or ceiling insulation. The windows, doors and framing are 63 years old and are a major cause of energy loss. Exterior finishes are deteriorated and require replacement. Electrical wiring and plumbing must be upgraded to meet modern construction codes. Asbestos and lead-based paint are evident throughout the houses. The community surrounding Pope AFB does not have sufficient, adequate housing assets to support existing requirements and programmed realignment actions. The latest Housing Market Analysis shows a deficit of 418 units.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Air Force members and their families will continue to live in extremely outdated, unsuitable and unsatisfactory housing. The housing will continue to deteriorate with age, resulting in increasing and unacceptable operations, maintenance and repair costs, and inconvenience to occupants. Costly repairs will continue, with little or no improvement in the living quality provided to occupants. Low morale and retention problems can be expected if such conditions are permitted to continue, since suitable, affordable off-base housing is not available.</p> <p><u>WORK ACCOMPLISHED IN PREVIOUS THREE YEARS:</u> None</p> <p><u>WORK PROGRAMMED FOR NEXT THREE YEARS:</u> None</p> <p><u>ADDITIONAL:</u> An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, replacement was found to be the most cost effective over the life of the project. However, the historical nature of the housing dictates that the units be improved rather than replaced. The cost to improve this housing is 81% of the replacement cost. The high cost is attributable to historical preservation/renovation requirements.</p>

10. Description of Proposed Construction: Improve 82 Wherry units and 7 SOQs. Work includes new plumbing, electrical, HVAC systems, refinishing interior surfaces, reconfiguration of functional layout. Improve exterior, install rear entry steel doors, provide patios, privacy fences, storage sheds, and correct drainage. Add parking areas throughout. Construct addition to SOQs to add authorized square footage.					
11. REQUIREMENT: 5,300 UN ADEQUATE: 3,911 UN SUBSTANDARD: 700 UN PROJECT: Improve 89 family housing units. (Current Mission) REQUIREMENT: Adequate living quarters are required for families of military members assigned to this base. Improvements needed to Wherry housing units include installation of rear entry steel doors, patios with screens for privacy, and area improvements to facilitate family recreation, safety and quality of life. Provide additional off street parking to alleviate congestion. Additional living space along with minor reconfiguration and upgrades of utilities in the existing structures are necessary to bring these units up to livability standards of similiar quarters both on and off base. Upgrades of electrical, plumbing and HVAC systems are needed to comply with building codes and to improve safety and reliability. All units will meet "whole house" standards and are programmed in accordance with the Housing Community Plan. This is the ninth of multiple phases to provide adequate housing for base personnel. Of the 1,540 units to be improved in this multi-phase initiative, 808 are completed or included in prior programs, and 643 will follow. CURRENT SITUATION: The Wherry units were constructed in the 1950's and have had no major improvements since original construction. Each building houses between four and 12 families and offers precious little privacy. Because of exposure to weather conditions and heavy usage, the rear entry

IMPROVE FAMILY HOUSING PHASE 9		ZHTV8200169	
<p>wooden doors have deteriorated. Because of high density of this development, the occupants have no outdoor privacy. The SOQs were constructed in 1935 and are located in a proposed historic district. They have had only routine repairs and minor improvements. The wiring and plumbing consist of the original systems in both Wherry and SOQ units mixed with some newer material added over the years. The SOQs are well below the authorized 1700 NSF. The proposed additions will provide a master bedroom with bath. Two types of Wherry housing units require additions of approximately 344 square feet to reach the authorized space and internal renovation and reconfiguration to meet current housing standards.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Major morale problems will result if this improvement initiative is not supported. Some Air Force members and their families will continue to be housed in unsuitable conditions, while neighbors and friends are in drastically improved units. These units will continue to deteriorate past the point of repair, resulting in loss of valuable economic assets to the Air Force. The housing will continue to be occupied until it becomes uninhabitable because adequate, affordable housing is unavailable. The current Housing Market Analysis shows a family housing deficit of 689 units.</p> <p><u>WORK ACCOMPLISHED IN PREVIOUS THREE YEARS:</u> None</p> <p><u>WORK PROGRAMMED FOR NEXT THREE YEARS:</u> None</p> <p><u>ADDITIONAL:</u> An economic analysis has been prepared comparing the alternatives for replacement construction, improvement, and status quo operation. Based on the net present value and benefits of the respective alternatives, improvement found to be the most cost effective over the life of the project. The cost to improve this housing is 65 percent of the replacement cost.</p>

10. Description of Proposed Construction: Provides general interior and exterior modernization and renovation of 52 housing units. Includes upgrading heating and plumbing systems, remodels kitchens & replaces windows. Includes demolition and asbestos/lead-based paint removal. Nieghborhood improvements include tree planting, play area fencing, off street pedestrian trail system, & nieghborhood entrances/road changes.					
11. REQUIREMENT: 2,069 UN ADEQUATE: 1,178 UN SUBSTANDARD: 462 UN PROJECT: Improve Family Housing (Phase 1). (Current Mission) REQUIREMENT: This project is required to provide modern and efficient housing for military members and their dependents stationed at F E Warren AFB. The historic housing must be upgraded to meet current life safety codes and provide a comfortable and appealing living environment comparable to the off-base civilian community. This phase of historic housing was not included in the HCP as it was to be accomplished prior to the HCP being developed. Funds were not available to award the project, so these historic units have been included in a revised HCP phasing plan. This is the first of multiple phases to upgrade 252 houses. No units have been upgraded or approved for upgrade previously. All units will meet "whole house" standards and are programmed in accordance with phase 1 of the revised Housing Community Plan. CURRENT SITUATION: This project upgrades and modernizes housing constructed between 1885 and 1932. These 100 year old houses require major renovation and repair to correct deterioration resulting from age and heavy use. No major upgrades have been made to these units for 30 years. The units do not meet the needs of today's families, nor do they provide a modern home environment. The existing heating system is the original coal fired, cast iron steam boiler, which was converted to gas.

IMPROVE FAMILY HOUSING PHASE 1	GHLN927185	
<p>The distribution system is the original one pipe steam line with cast iron radiators. Electrical & plumbing systems do not meet codes. Ground Fault Circuit Interrupter protection is not provided for bathrooms, kitchens, and exterior circuits. Kitchens are old and need remodeling. The original lath and plaster walls and ceilings are badly cracked and can no longer be repaired by patching and painting. All flashings, gutters, and downspouts require replacement. This project will bring the units to current standards, and no other improvements are required at this time.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Units will continue to deteriorate rapidly, resulting in increased operating, maintenance and repair costs to the Government and inconvenience to the residents. Construction of new officer/enlisted housing will be required if these buildings are allowed to deteriorate. Low morale and retention problems can be expected if existing conditions are allowed to continue, since suitable, affordable off-base housing is not available. The most recent Housing Market Analysis shows an on-base housing deficit of 429 units.</p> <p><u>WORK ACCOMPLISHED IN PREVIOUS THREE YEARS:</u> None</p> <p><u>WORK PROGRAMMED FOR NEXT THREE YEARS:</u> None</p> <p><u>ADDITIONAL:</u> An abbreviated economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo. Based on the net present values and benefits of the respective alternatives, plus the fact these brick units are on the National Register of Historic Places and cannot be demolished, improvement was found to be the most cost efficient over the life of the project. The cost to improve this housing is 97% of the replacement cost.</p>

10. Description of Proposed Construction: Replace heating, ventilating, and air conditioning, exterior siding, doors and windows for 3 housing units. Install wiring, repaint interior, landscape yards and install sprinkler system. Renovate downstairs bathroom.					
11. REQUIREMENT: 27 SF ADEQUATE: 24 SF SUBSTANDARD: 3 SF PROJECT: Improve Family Housing. (Current Mission) REQUIREMENT: Adequate housing for military personnel and their families as required by Air Force Quality of Life Standards consistent with the quality of today's housing construction. The housing must be upgraded to meet current life safety codes and to provide a comfortable and appealing living environment comparable to the surrounding community. No other housing is available in this remote desert environment. This project is phase 5 of 5 projects to upgrade 27 houses. All units will meet "whole house" standards. Twenty-four units have been upgraded or are approved in previous phases, and the three remaining are to be accomplished in this phase. CURRENT SITUATION: The NASA units were constructed in 1960 to then current Australian standards. The original siding has weathered 30 years in this harsh desert environment. Thermal protection is not provided by existing siding. Original window frames are difficult to operate. The reverse cycle HVAC systems were designed for use in the climate of Adelaide, South Australia (a coastal city), not the extreme temperatures found in Woomera (located in the outback). During the summer months, the temperature reaches 112 F and during the winter, below 45 F. These units do not provide sufficient heating and cooling. The galvanized gutter system is corroded. Storm water drainage piping is broken and clogged from the debris flowing through the rotted gutter system. Village

ADVANCE PLANNING AND DESIGN

Program (In Thousands)
FY 1996 Program \$8,989
FY 1995 Program \$9,275

Purpose and Scope

This program provides for preliminary studies to develop additional family housing facilities, one time multi-phase design, and housing community plan (HCP) developments; studies for site adaptation and determination of type and design of units; and working drawings, specifications, estimates, project planning reports and final design drawings of family housing construction projects. This includes the use of architectural and engineering services in connection with any family housing new or post acquisition construction program.

Program Summary

Authorization is requested for:

- (1) Advance planning and design for future year housing programs;
- (2) FY 96 Appropriation of \$8,989,000 to fund this effort as outlined in the following exhibit:

1. COMPONENT		FY 1996 MILITARY CONSTRUCTION PROJECT DATA		2. DATE

<p><u>REQUIREMENT:</u> The funds requested are necessary to procure architect-engineer services to make site and utility investigations; one time multi-phase design, and housing community plan (HCP) developments; for the preparation of design and specifications of advance plans for future year housing programs in connection with any family housing new or post acquisition construction programs.</p> <p><u>IMPACT IF NOT PROVIDED:</u> The funds requested are necessary to support the development of the Housing Community Plans and to support the new construction and post acquisition construction programs.</p>					

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

OPERATIONS, UTILITIES AND MAINTENANCE
(Excluding Leasing and Debt)

Program (In Thousands)
FY 1996 Program \$733,519
FY 1995 Program \$712,062

Purpose and Scope

a. Operations. This portion of the program provides for operating expenses in the following sub-accounts:

(1) Management. Includes installation-level management such as housing office operations, quality assurance evaluators, administrative support, community liaison, and annual service fee paid to the Corporation-Trust Company to provide the required corporate presence in Delaware. United States Air Force Housing, Inc., continues as the entity holding title to Capehart and Wherry real property. Housing referral costs are also included; the housing referral program assists personnel to find quarters in the private sector and implements the Fair Housing Act of 1968.

(2) Services. Provides basic support services such as refuse collection and disposal; fire and police protection; entomology and pest control; snow removal, street cleaning.

(3) Furnishings. Procures household equipment (primarily stoves and refrigerators) and, in limited circumstances, furniture; controls furnishings inventories; maintains and repairs such items.

(4) Miscellaneous. Includes mobile home hookups, leased office and warehouse space supporting family housing, payments to other Federal agencies or foreign governments to operate Permit Housing units occupied by Air Force personnel, and similar costs.

b. Utilities. Includes all utilities serving family housing, purchased and base produced, except telephone.

c. Maintenance. Provides upkeep of family housing real property, as follows:

(1) Maintenance/Repair of Dwellings. Service calls, routine maintenance, repairs and replacement.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

(2) Exterior Utilities. Maintenance and repair of water, sewer, electric, heat and gas lines located within family housing areas.

(3) Other Real Property. Upkeep of grounds, roads, parking areas, and other property for the exclusive use of family housing not discussed above.

(4) Alteration and Additions. Minor alterations to dwellings or housing support facilities. Larger scope or higher dollar value items are funded in the construction program.

Considering the effects of actual base closures and proposed overseas force structure draw downs, the Air Force family housing budget requests minimum essential resources to provide military families with housing either in the private market, through assistance from a housing referral office, or in government housing. Increased emphasis has been placed on the proper funding of the family housing operations and maintenance program. The Air Force's FY 1996 Operations and Maintenance program includes the following areas of emphasis:

- * Maintain the livability of the existing housing inventory worldwide.

- * Utility consumption per unit is being reduced due to a program of energy goals which places increased management emphasis on conservation and due to whole house improvement efforts.

- * Funding for government appliances and furniture consistent with cost/benefit studies, the delivery of new housing units which need government supplied appliances and the redistribution of appliances from closure bases.

- * Reduction of furnishings inventories in accordance with base closure schedules. Redistribution of excess furnishings from closure bases to the other bases remaining open.

- * Includes \$4.0 million for contract cleaning at overseas locations only. The budgeted amount will allow cleaning of approximately 17,000 units at an average per unit cost of \$256.00.

- * Continuing the special effort to lower operations and maintenance costs in high cost quarters.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996/97 BUDGET REQUEST

This budget request is for funds needed to meet must pay operations and utilities expenses, as well as the maintenance and repair of our existing housing inventory at over 110 major installations. We also provide referral services to members seeking housing in the private sector. The Air Force shares the concerns of the Congress to improve support to military families and to properly maintain the housing inventory. This budget supports a long-range program responding to Congressional desires while considering the current environment of budget restraint.

Operations and Maintenance Program Summary - Highlights

Authorization/Appropriation is requested in FY 1996 for \$733,519,000. This amount, together with estimated reimbursements of \$13,151,000, will fund the FY 1996 Operations and Maintenance program of \$746,670,000.

A summary of the funding program for FY 1996 is as follows
(\$ in thousands):

Operations (\$ in Thousands)

FY 1996 Request
\$127,009

The FY 1996 program represents Air Force family housing requirements and was developed using OSD/OMB approved inflation and foreign currency formulation rates. Adjustments have been made for actual base closures and proposed overseas force structure draw downs. Each program sub-account is described in detail in the following analysis:

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST
RECONCILIATION OF INCREASES AND DECREASES
Exhibit OP-5

Management. The Management account includes installation-level management such as housing office operations, quality assurance evaluators, administrative support, community liaison, and annual service fee paid to the Corporate-Trust Company to provide the required corporate presence in Delaware. Housing referral costs are also included; the housing referral program assists personnel to find quarters in the private sector and implements the Fair Housing Act of 1968.

Analysis of Change in Management

With fewer houses to support, the Management requirement is reduced. As a result of Round II/III Base Closure, Castle AFB, KI Sawyer AFB, Griffiss AFB, and Plattsburgh AFB were closed in FY95. March AFB will be closed in FY96 as a result of Round III Base Closure.

The Management account is not per unit specific since there is a basic level of support and manning for the housing office regardless of the number of units. The request includes increases for inflation. The increases are offset by a decrease in housing management offices as a result of base closure and drawdown actions.

There is no programmatic growth above inflation.

RECONCILIATION OF INCREASES AND DECREASES
Exhibit OP-5

Services. Provides basic support services such as refuse collection and disposal; fire and police protection; entomology and pest control; snow removal; street cleaning.

Military Family Housing Activities are effected by many new environmental standards. The environmental legislative changes from states and foreign country's have evolved quicker than planned leading to a highly uncertain ability to predict program growth. New initiatives to control lead based paint, asbestos, leak detection on underground heating fuel storage tanks, spill/overflow protection and corrosion control are also covered within this account. Increases to land fill costs are programmed however we anticipate these to continue to increase in the future.

Exhibit OP-5

Furnishings. Includes the procurement for initial issue or replacement of household equipment (primarily stoves and refrigerators) and in limited circumstances, furniture; the control, moving and handling of furnishings inventories; and the maintenance and repair of such items.

While the exact number of military families and timing of the overseas draw down is still occurring, continued support of bases will remain open as necessary to maintain adequate backup stock of appliances and furnishings for our overseas dependent families.

Also, certain furniture items will continue to be needed. Loaner sets of furniture are issued to military families overseas to let them occupy permanent quarters prior to the arrival of personally owned furniture and to let personnel stay in permanent quarters after furniture is shipped due to a change of station. Loaner sets reduce the cost of Temporary Quarters allowances which makes loaner furniture very cost effective. Other items of household furnishings normally built into U.S. houses which are limited or not available in foreign countries, such as wardrobes (clothes closets), kitchen cabinets or appliances, are issued to military families.

Leases in Europe require closets and cabinets to be issued along with the appliances since rental units overseas do not have the same accommodations as are available in the states.

The furnishings account funds essential furnishings at levels consistent with cost/benefit studies and the need of the Air Force. Much of the funding requested in the furnishings account results from an analysis of the most economical use of funds for the government and avoids costs in other accounts such as military allowance and other support appropriations.

Utilities. This project provides for all utilities consumed in government-owned family housing. Included is electricity, heating, water, and sewage and waste systems. MFH facilities consume approximately one-fifth of Air Force facility energy usage; therefore, MFH residents and management share a significant role in the achievement of Air Force energy reduction goals. Since MFH occupants are not billed for their energy consumption, conservation motivation must be rooted in other than financial incentives. The single most effective incentive is command emphasis. Energy projects to install set back thermostats, water heater jacket insulation and insulation of crawl and attic spaces have had good results toward the attainment of Air Force energy conservation goals.

13.	Program Decreases:	
a.	Energy Conservation Savings	\$ -1,694
b.	Base Closure, Drawdowns, Demolitions (-5,560 units)	\$ -9,647
14.	FY 1996 Budget Request:	\$197,539

Analysis of Changes in Utilities

With fewer houses to support, the Utility requirement is reduced. As a result of Round II/III Base Closure, Castle AFB (933 units), KI Sawyer AFB (1,655 units), Griffiss AFB (950 units), and Plattsburgh AFB (1,639 units) are removed from Air Force housing inventory in FY95. March AFB (710) units will be removed from inventory in FY96/97 as a result of Round III Base Closure.

The burdensharing adjustments with Japan stabilize in FY95 and the downward trend does not appear in FY96 and out.

The requirement for FY 1996 is based on historical obligation trends which continue to be influenced by mild weather and energy conservation savings resulting from whole house improvements and energy conservation projects. The budgeted amount in the FY95 PB was below the historical projections based on an analysis of actual FY93 and actual estimates for FY94.

We anticipate realigning \$9.0M into the Utilities Sub-Account during FY95 to fully fund the requirements based on historical trends from FY89/94. Therefore, after utility costs are corrected in FY95, percentage change from FY96 to FY97 is below inflation. The consumption usage stream shown in the following table is consistent with the Air Force goals of reducing energy consumption and costs.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST
RECONCILIATION OF INCREASES AND DECREASES (UTILITIES
CONTINUED)

Exhibit OP-5

UTILITIES (000K)

ENERGY CONSUMPTION	<u>FY 94</u>	<u>FY95</u>	<u>FY96</u>
Electricity	1,797	1,765	1,751
Fuel Oil (Bbls)	396	393	390
Natural Gas (KCF)	6,469	6,393	6,330
Coal (MBTUs)	392	360	356
Purchased Steam (MBTUs)	580	580	578

The Budget request for utilities in FY 1996 includes the costs of electricity, coal, gas, fuel oil, water and sewage treatment. Overall, utility rates are stabilizing. Continued conservation efforts are reducing consumption and costs. The primary reason for cost growth is due to inflation which is offset by continued emphasis on conservation of utilities.

Analysis of Changes in Maintenance Program

The above funding profile includes one change to the FY95 appropriated level. We anticipate realigning \$9.0M during FY95 to the Utility Sub-Account to fully fund the requirements based on historical trends from FY89/94.

With fewer houses to support, the Maintenance requirement is reduced. As a result of Round II/III Base Closure, Castle AFB (933 units), KI Sawyer AFB (1,655 units), Griffiss AFB (950 units), and Plattsburgh AFB (1,639 units) are removed from Air Force housing inventory in FY95. March AFB (710 units) will be removed from inventory in FY96 as a result of Round III Base Closure.

Previously limited maintenance funding and a high occupant turnover has accelerated deterioration of the Air Force's aging housing inventory.

Constrained funding has resulted in a greater reliance on temporary fixes which has in the long run only exacerbated the deterioration of our housing units. In addition, the infrastructure which supports the units is now beyond its projected economic life at most of our installations. Several systems have failed and many are on the verge of failure.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST
RECONCILIATION OF INCREASES AND DECREASES (MAINTENANCE
CONTINUED)

Exhibit OP-5

This budget reflects the Air Force corporate decision to increase emphasis on maintenance and repair of our dwellings to ensure availability of quarters which meet existing standards. The method we use to measure our effectiveness against these standards is to track the impact of the funded program against the Deferred Maintenance and Repair (DMAR). This year, the Air Force has made a concerted effort to scrub DMAR requirements. When funding is lower than maintenance requirements, asset deterioration accelerates and the amount of affected housing units and infrastructure grows. This growth is above inflation and also increases the scope of future programmed work. More emergency repairs occur which are disruptive, costly, and man-hour intensive. The backlog also generates other jobs (i.e., delayed roof projects require additional work to fix leaks, patch and paint ceilings, etc.). The Total Maintenance requirements reflected on the DMAR chart (on the following page), reflects only those projects which are required to meet and sustain approved standards.

This request reflects the decision to fund maintenance at a level which partially arrests DMAR growth. As reflected in the DMAR chart, this level of funding will reduce the DMAR growth beginning in FY96.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

The following chart illustrates the Backlog of Deferred Maintenance (In then Year \$M).

Fiscal Year	<u>FY 93</u>	<u>FY94</u>	<u>FY95</u>	<u>FY96</u>
Backlog Proj		1,032	800	913
Backlog Actual	1,311	755	865	TBD
Closure Offset	- 223	0	0	0
O&M Requirement*	441	431	433	424
Total Requirement	1,529	1,186	1,298	1,337
O&M Funding	497	386	385	409
O&M Backlog EOY	1,032	800	913	928
Backlog Red/ (Growth)	279	(45)	(48)	(15)
Inventory	128,083	122,077	119,389	113,829

* Adjusted to revised inflation and inventory numbers.

A one time adjustment occurred at the end of FY93. The FY93 Year-End Backlog of \$1,032M was reduced to \$755M at the start of FY94 due to three reasons: (1) A reduction of \$121M in BRAC III projects removed from the list, (2) \$42M due to bid savings (a more favorable bid environment), and (3) \$95M for projects that were dropped from the list due to a revalidation of requirements. The BRAC units will be closed between FY95 and the end of FY96.

There is an impact on M&R requirements and the DMAR when the level of investment funding is lower than the requirement. We generally have projected the investment impact but have chosen not to use these numbers in the future since the tracking of the unfunded investment program and the related interface with maintenance costs vary so greatly over time that accurate projections become subjective. While we cannot precisely track the value, there are obvious impacts to the O&M program. An investment requirement not funded results in a maintenance requirement that is exceedingly more costly than a newly renovated facility.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

If "whole house" renovations are delayed for too long, emergency projects to fix specific systems (i.e. roofs) must be accomplished in the interim, driving up life-cycle costs.

This new method of displaying DMAR has been successful in projecting costs since it requires an annual project validation. This method will bring more discipline and accuracy to our DMAR numbers.

Quality family housing has a great impact on the lives of our members and the readiness of our forces. It is for this reason that we believe the maintenance dollars the Air Force has programmed in this budget will have a payback far greater than that which can be measured in terms of average unit costs.

FY 1996 BUDGET REQUEST

FAMILY HOUSING REPAIRS
(Exceeding \$15K Threshold)

This information is provided to comply with the 1984 House Appropriations Committee language that requires the Services to report any expenditures from the maintenance account which will exceed \$15,000 per unit.

The number of projects have increased significantly over previous years. This is primarily due to the growing number of units that are waiting on investment funding that must be repaired to continue occupancy of the unit. Since over 60 percent of the average investment project includes major maintenance and repair actions, we can cover some of the problems through the O&M program. While these projects are shown as a line item, the budget is formulated to an overall maintenance and repair requirement. The overall maintenance requirement is not affected by the number of projects requested over threshold.

The \$15,000 limit has been in effect since 1984 and should be increased to a reasonable limit considering the rate of inflation. We have traditionally held down the number of projects that were over the threshold for the Investment program. This will need to increase since the number of houses waiting for revitalization are increasing. Revising the maintenance limit with inflation would help keep the number of projects over threshold down.

Vandenberg	172	1959	18.9	1,064	183,008	3,254	None

Narrative: This project is phase 3 of a multiphased project that replaces overhead galvanized water pipes that are corroded and leaking, ruining sheet rock walls/ceilings and light fixtures. The water pipes are full of mineral deposits severely restricting flow resulting in minimal water pressure for showering and washing. The electrical system is a two-prong ungrounded system that is unsafe especially in bathrooms and kitchens. It is incompatible with modern three-prong appliances rendering them unsafe if used on a two-prong system. In addition, the existing 50 Amp services need to be upgraded to handle the increased load of numerous appliances not available in the 1960's. This project will provide grounding and increased electrical capacity where necessary and replace the deteriorated water piping. This project will supply the minimum requirement of reliable water and safe electricity to the homes.

Replaces electrical distribution, mechanical, ventilation, heating, water, and sewage systems. Replaces 110 volt system, TV antenna system, letter boxes, blinds, grating for basement windows and doors, sanitation systems, stairwell steps and railings, and doors. Provides repairs for landscaping and sidewalks.

The following projects were approved out-of-cycle in FY94:

Travis AFB CA The initial scope of the project was to repair three bathrooms. The scope of the work expanded to replace inadequate electric wiring, insulate the attic, carpet three bedrooms, texture and paint interior walls and renovate the garage for a total cost of \$19,577.

Langley AFB VA Maintenance and repair cost was originally \$12.8K for the highest unit. During paint removal, lead-based paint was encountered. The cost for removal and disposal of lead-based paint was \$5.7K per unit. As a result, the combined cost of \$18.5K exceeds the \$15K Maintenance and Repair threshold.

Analysis of Changes in Reimbursements

Proceeds from the sale of Military Family Housing occurred in FY94. In order to make the disbursement of \$2.2M from the proceeds of the sale of the housing units, additional reimbursement authority is required in FY95.

With fewer houses to support, the reimbursement requirement is reduced. As a result of Round II Base Closure, Castle AFB (933 units), KI Sawyer AFB (1,655 units), Griffis AFB (950 units), and Plattsburgh AFB (1,639 units) are removed from Air Force housing inventory. March AFB (710 units) will be removed from inventory in FY96 as a result of Round III Base Closure.

MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST
RECONCILIATION OF INCREASES AND DECREASES
Exhibit OP-5

Leasing. Provides for payment of leasing costs of privately owned housing units for assignment as government quarters. The family housing leasing program provides housing at both domestic and foreign locations when the local economy cannot provide adequate support and the deficit of on-base housing also does not satisfy requirements. The leasing program is authorized by 10 U.S.C. 2828 and provides for payment of rent and operations and maintenance costs of privately owned quarters for assignment as government quarters to military families. This program also includes funds needed to pay for services such as utilities and refuse collection when these services are not part of the contract agreement.

The Air Force continues to rely on the private sector to meet the majority of housing needs. Where the private sector rental markets and on-base housing cannot meet requirements and cost effective alternatives do not exist, short and long-term leases are used. In high cost areas and overseas, the Air Force relies extensively on the leasing program to obtain housing to meet critical housing needs.

Authorization is requested for appropriation of \$115,665,000 to fund leases and related expenses in FY96. The FY 1996 request for family housing leasing points is summarized as follows:

- (1) 9,201 Foreign lease points
- (2) 5,800 Section 801 lease points
- (3) 3,333 Domestic lease points

Foreign Leasing

Leasing in foreign countries is controlled by Congress. First by the number of lease points authorized, then by the review and approval of contract proposals, and finally by the funds appropriated. As overseas base closures occur, foreign leases are terminated as soon as economically possible. The Air Force is using approximately one-half of the authorized foreign lease points. Air Force strategy during the drawdown in Europe is to maximize the use of government-controlled assets thereby providing more affordable housing for our personnel and avoiding expensive off-base housing entitlements. The Air Force has been able to retain some housing areas from closing bases for use at bases that are remaining. In fact, the percentage of personnel able to reside in government controlled quarters is increasing.

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST
RECONCILIATION OF INCREASES AND DECREASES (LEASING CONTINUED)
Exhibit OP-5

As the Air Force draws down in Europe, the order of the release of housing assets is placed, where possible, as (1) private rentals (which are usually the most expensive), (2) GRHP and build-to-lease units, and (3) government owned. The exact mix of types of housing will depend upon available assets in each locality. Renewals for leases will be on a year-to-year basis to reduce cost by limiting termination liability. Full authorization is required to allow for sufficient flexibility during restructuring to maximize cost effective solutions.

The lease at Comiso Italy is a special case where repeated efforts by the Air Force to achieve a cost effective solution for termination of the lease have not yet been successful. Therefore, another annual lease payment of \$7.3 million is required even though a buy-out of the lease for \$9.5 million would be the most cost effective long-term solution by saving the U.S. \$4.1 million over the life of the contract. The appropriations conference allowed us to buy-out the lease within existing resources however the authorizations conference was silent on this issue.

Section 801 Leasing

This program is helping to reduce our CONUS family housing deficit at sites where Air Force families are seriously affected by housing shortages and high costs.

In FY 1984, Congress authorized testing a new leasing program for U.S. installations in P.L. 98-115, Section 801. Subsequently, nine housing projects were completed and occupied; Eielson AFB, AK, 300 units; Hanscom AFB, MA, 163 units; Goodfellow AFB, TX, 200 units; March AFB, CA, 200 units; Travis AFB, CA 300 units; Ellsworth AFB, SD, 200 units and 828 units; Hurlburt AFB, FL, 300 units; and Cannon AFB, NM, 350 units. The 307 units of the Eielson AFB project will be occupied by 1997. In addition, as part of a combined project with the Naval District of Washington, 828 units for Andrews AFB are scheduled for full occupancy by the 4th quarter of FY95.

Exhibit OP-5

Domestic Leasing

Domestic leasing provides temporary housing for Air Force families pending availability of permanent housing. For example, Onizuka's Domestic leasing project has provided interim relief for service families assigned to the San Francisco area pending transfer of Moffett NAS housing of the Air Force. This has been an excellent transition procedure to support families in a high cost area while preparing for long term solutions with the transfer of Moffett housing to the Air Force.

Congress has authorized leasing of domestic units (10 U.S.C. 2828) on a temporary basis to satisfy critical requirements until a permanent solution can be found or if more economical than construction.

The HIGH COST domestic leases range between \$12k and \$14k per year. No domestic leases exceeds \$14K per year.

* The adjusted cost per overseas leases is determined by multiplying \$20k times the FY 88 exchange rate divided by the FY 98 exchange rate. Leases exceeding this cost are defined as HIGH COST and are counted against the number of high cost leases allowed.

** Oslo lease moved to Stavanger in mid FY94

*** Stata Department pool leases do not count against the total number of high cost leases allowed.

MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

DEBT PAYMENT

Program (in Thousands)
FY 1996 Program \$29

Purpose and Scope

The Debt Payment program continues in FY 1996/97 in name only, as the last of the Capehart and Wherry mortgages were liquidated in FY 1989.

This program includes payment of Servicemen's Mortgage Insurance Premiums to FHA for mortgages assumed by active military personnel prior to FY 1980.

Program Summary

Authorization is requested for the appropriation of \$29,000 for FY96:

<u>(\$ In Thousands)</u>	<u>FY 1995</u> <u>ESTIMATE</u>	<u>FY 1996</u> <u>ESTIMATE</u>

DEPARTMENT OF THE AIR FORCE
MILITARY FAMILY HOUSING
FY 1996 BUDGET REQUEST

Servicemen's Mortgage Insurance Premiums

Servicemen's Mortgage Insurance Premiums, Section 124, Public Law 560, 83rd Congress, The Housing Act of 1954, aids in providing homes for members of the Armed Forces of the United States and their families through a system of FHA mortgage insurance especially designed to assist such members in financing the construction or purchase of homes.

This program was discontinued through Public Law 93-130 (Military Construction Appropriation Act, 1980) which allowed coverage only on existing mortgages covered prior to FY 1980. The amount needed to continue funding premiums on mortgages existing prior to FY 1980 continues to decrease. The program for FY 1995 and FY 1996 is as follows:

<u>Fiscal Year</u>	<u>Number</u>	<u>Average Payment/YR</u>	<u>Amount(\$000)</u>
1995	143	182	26
1996	160	182	29
